

ATTALEA FUNIFERA SUPPLEMENTARY

Readers will recall the article by Gerhard Cadée on *Attalea funifera* Mart. seeds in the previous NEWSLETTER (PN 4 [3], 51-54). Three 7 to 8 cm long seeds of this tropical palm were reported from the Dutch coast, and the author originally enclosed a photograph to illustrate the article. Unfortunately, reproduction of the photograph was inadequate for publication. We are therefore pleased now to be able to publish a figure of one of the seeds, drawn by Gerhard's wife.

Attalea funifera

Attalea funifera seed from the beach of Texel, the Netherlands.
Drawing by J. Cadée-Coenen. Addition to Cadée G.C. (1988);
PORCUPINE NEWSLETTER, 4 (3); 51-54.
