The Pegaso SDI  
A highway to better management of the  
Coast of the Mediterranean and the  
Black Sea

The Pegaso SDI is designed to support the Pegaso shared Governance Platform for the delivery of integrated Coastal Zone Management, and the integrated assessments for the coastal zones of the Mediterranean and the Black Sea. The construction of the SDI involves a collaborative process, to define common objectives, targets and actions. It is therefore crucial to complete a common Capacity building and training package to achieve this common view within the network of partner institutions. This Capacity Building within the Pegaso SDI,

consists of an e-learning platform, a 'hands-on' training session currently underway organised by the Flanders Marine Institute (VLIZ, Marine & Coastal Research & Management in Flanders), the Universidad Pablo de Olavide (UPO) and the Universitat Autònoma de Barcelona (UAB), and a guideline on how to harmonise and share spatial data. Forthcoming workshops for integrated training on tools and Scenarios for pilot cases will follow in November in Arles (France) and in Turkey (Istanbul) in December 2013.

# MedOPEN virtual training course on ICZM

The 2012 MedOpen Advanced Course on the ICZM Process, intended in the first place for the Pegaso partners, has been concluded. During the 13 weeks of the Course, the participants were acquainted with the ICZM in general but in more detail with the ICZM Process being crucial for the implementation of pilot projects in the Pegaso CASEs.

## 2012 Mediterranean Coast Day

### A Stock-take presentation at technical meeting with PAP/RAC NFPs

Back-to-back with the 2012 Mediterranean Coast Day central regional celebration, a

technical meeting with the PAP/RAC National Focal Points (NFPs) was organised in Split, on the 24<sup>th</sup> of September 2012. In addition to PAP/RAC NFPs from 9 countries and the EU representative, the MAP Co-ordinator and the representatives of the Pegaso and SHAPE projects, attended the meeting. At the meeting, the progress on the implementation of the Action Plan for the ICZM Protocol was presented. The representatives of the SHAPE and Pegaso projects provided the participants with the basic information about these two projects and the activities being implemented. PAP/RAC presented the preliminary results of the Stock-taking analysis being in progress. During the discussion that followed this presentation,

recommendations were given for the follow-up. The specific Pegaso product, the ICZM Process and ICZM wiki, were also presented and discussed. The participants were informed about the Pegaso outputs - the ICZM Indicators and the Regional Assessment.

The 2012 central regional Mediterranean Coast Day celebration was organised in Split, Croatia, by PAP/RAC in collaboration with UNDP's "Coast" programme within the IPA Adriatic SHAPE project. The main event was on September 25 but the activities extended over the whole week. The theme of the celebration was "The Voice of the Coast". The ICZM Protocol and its practical implementation highlights were presented including those from the Pegaso project.

A working meeting within T2.1 was held in PAP/RAC premises on the 28<sup>th</sup> of September to discuss the structure and contents of the Conceptual Framework for ICZM.
