

EurOCEAN 2010: Grand Challenges for Marine Research in the next Decade
Ostend, Belgium, 12th – 13th October 2010.

New Innovations in Marine Science and Technology: *Emerging Technologies Converging on the Oceans*

With acknowledgements to Prof John Delaney, University of Washington

Ireland

Thermae Palace (Oostende, Belgium, 12–13 October 2010)

Challenges – how to:

- feed a growing world population ?
- reduce overfishing?
- harness Renewable Ocean energy ?
- reduce anthropogenic impacts on the seas and oceans ?
- produce reliable climate change scenarios/forecasts to advise mitigation and adaptive strategies?
- promote innovation (Europe 2020 Strategy/Innovation Union)?

URGENCY

Opportunities

- Feed a growing world population
- Reduce overfishing
- Harness Renewable Ocean Energy
- Reduce anthropogenic impacts on the seas and oceans
- Produce reliable climate change scenarios/forecasts to advise mitigation and adaptive strategies
- Promote innovation (Europe 2020 Strategy/Innovation Union)

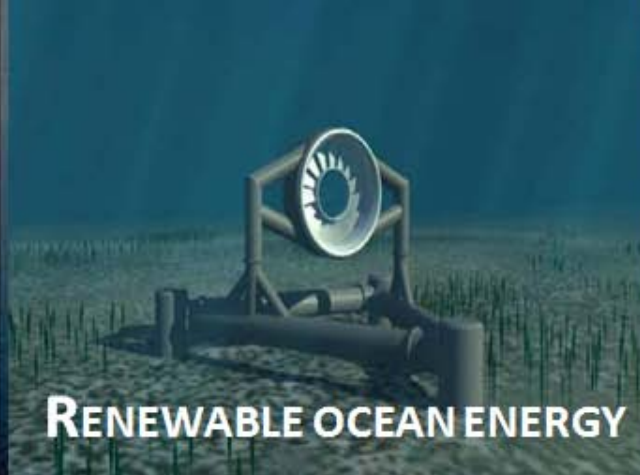

There are 1.2 billion people that are under nourished in the world today

DIGITAL IMAGING

Renewable Energy from the Sea:

Security of Supply – Reduction in CO2 – New Employment opportunities

Renewable Energy from the Sea:

Security of Supply – Reduction in CO₂ – New Employment opportunities

By 2050 Europe could source up to 50% of its electricity needs from Marine Renewable Energy. This will have a profound impact on the European economy and European citizens. It will contribute to energy supply and security, reduce CO₂ emissions, improve the state of the environment, improve quality of life, provide incentives for a range of new innovative jobs and herald a new era of environmentally sustainable development.

What has Marine Science done for Medicine?

- What has Medicine done for Marine Science?

Extract of the horseshoe crab's blood is used by the pharmaceutical / medical device sector to ensure that their products, e.g., intravenous drugs, vaccines, and medical devices, are free of bacterial contamination.

And then there's the Squid and its Giant Nerve Fiber

<http://www.horseshoecrab.org/med/med.html>

Medical CT and MRI Scanners now being used to determine impact of Noise Pollution on Cetaceans

Deep Ocean

Shelf and coastal seas

OCEAN OBSERVATORIES

Satellites

Active and passive sensors enable measurements of ocean surface parameters (SST, wind, sea level height, sea state, sea ice, ocean colour) and of the geoid
Data gathering (e.g. from drifter, Argo profilers)
www.esa.int

Satellites

Remote sensing of shelf sea ecosystems
www.est.org/research-areas/marine-board/publications.html

Sea ice observations

in situ and remotely sensed
www.damodes-eu.org

Ocean reference sites

Wide variety of variables
Time series
Surface to full ocean depth
www.oceansites.org

Ship of Opportunity Programme

Repeat XBT line network measuring temperature profiles
www.jcommops.org/scoopip/

Sustained and repeated ship-based hydrography and carbon network

Research ship full depth T, S & carbon profiles
Identified lines
www.jcommops.org

Volunteer Observing Ship (VOS) fleet

Surface meteorology, SST
VOSclim
Includes extensive ship metadata
www.jcommops.org/sot
Carbon VOS
pCO₂ and surface T&S
www.ioc-goos.org

Oil and gas platforms

Meteorological data

Shelf and near-shore moorings; coastal observatories

SST, SSS, S, V profiles
Chemical and biological sampling
Coastal HF radar networks

Ferry box

Measurements include:
SST, SSS, oxygen, nitrate
sound velocity, fluorescence,
light, redox levels, PH,
dissolved organic material,
turbidity, chlorophyll
www.ferrybox.org

Surface drifter array

Surface V, SST, SLP
www.meteo.shimizu.ac.jp

Moored buoys arrays

Surface meteorology, SST, SSS, SLP
Ocean T, S-V profiles
www.meteo.shimizu.ac.jp/legos

Research vessels

Discrete sampling
e.g. T, S, biology, chemistry
www.gosud.org
www.ioc-goos.org
www.eurocean.org
www.ioc-goos.org

Tide gauges networks

Sea level
Regional and national
www.glass-sealevel.org

Argo profiling float array

T, S profiles every 10 days
V at ~2000m
www.ifremer.fr/euro-argo

Gliders

Provide long path T, S and vertical water velocity with depth
www.ocean-ipsi.upmc.fr/gliders/EGOI/

Autonomous underwater vehicles

Sensors include compasses, depth sensors, sonars, magnetometers, thermistors and conductivity probes

Continuous plankton recorder

Measures ecology and biogeography of plankton
www.sahfos.ac.uk

Drifters, autonomous vehicles, gliders, ROVs

Measurements include temperature, salinity, velocity, biogeochemistry, positional and other information, depending on vehicle

Cable networks, ocean transport measurements

Acoustic doppler current profilers

Moored or ship-based

Coastal zone monitoring

Land and sea-based instrumentation
Physical, biological and chemical sampling
Sediments

Key

SST = Sea surface temperature
SSS = Sea surface salinity
SLP = Sea level pressure
T = Temperature
S = Salinity
V = Ocean current data
pCO₂ = Partial pressure of carbon dioxide
XBT = Expendable bathy-thermograph
