INVESTING IN YOUR FUTURE

- **Wadden Sea World Nature Heritage**
- **Trilateral Cooperation on the Protection of the Wadden Sea**
- **Breeding and wintering area for up to 12 millions birds per annum**
- **Supports more than 10 percent of 29 species**
- **One of the last remaining natural, large-scale, intertidal ecosystems**

# User: Trilateral stakeholder forum

# WSF tasks & working groups

## Goals

- Sustainable development of the region
- Cross-border cooperation
- Cross-sectoral cooperation
- Transnational concepts
- Joint recommendation towards policy makers

## WGs

- ICZM & MSP
- Energy and industry
- Shipping and ports
- Fishery
- Agriculture
- Cultural identity

Need for spatial information on

- existing uses
- protection regimes
- spatial plans

both on land and on sea

# The idea!

Open and transparent spatial information for the Wadden Sea Region

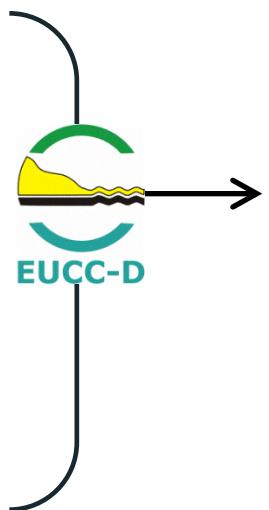

- Trilateral
- Crossing administrative borders (e.g. land - coastal waters - EEZ)
- Cross sectoral
- Easy to access and easy to use
- Maps and information from different sources shown in one common symbolisation
- Information on both existing and planned uses
- A tool helping stakeholders to identify pressures, processes and conflicts in the Wadden Sea Region
- A tool helping stakeholders to develop own cross-border solutions and to participate actively in decision making processes

# Role of EUCC

- Identify data sources
- Data collection, editing and merging
- Development of operation of a stakeholder-coordinated tool

reliable data

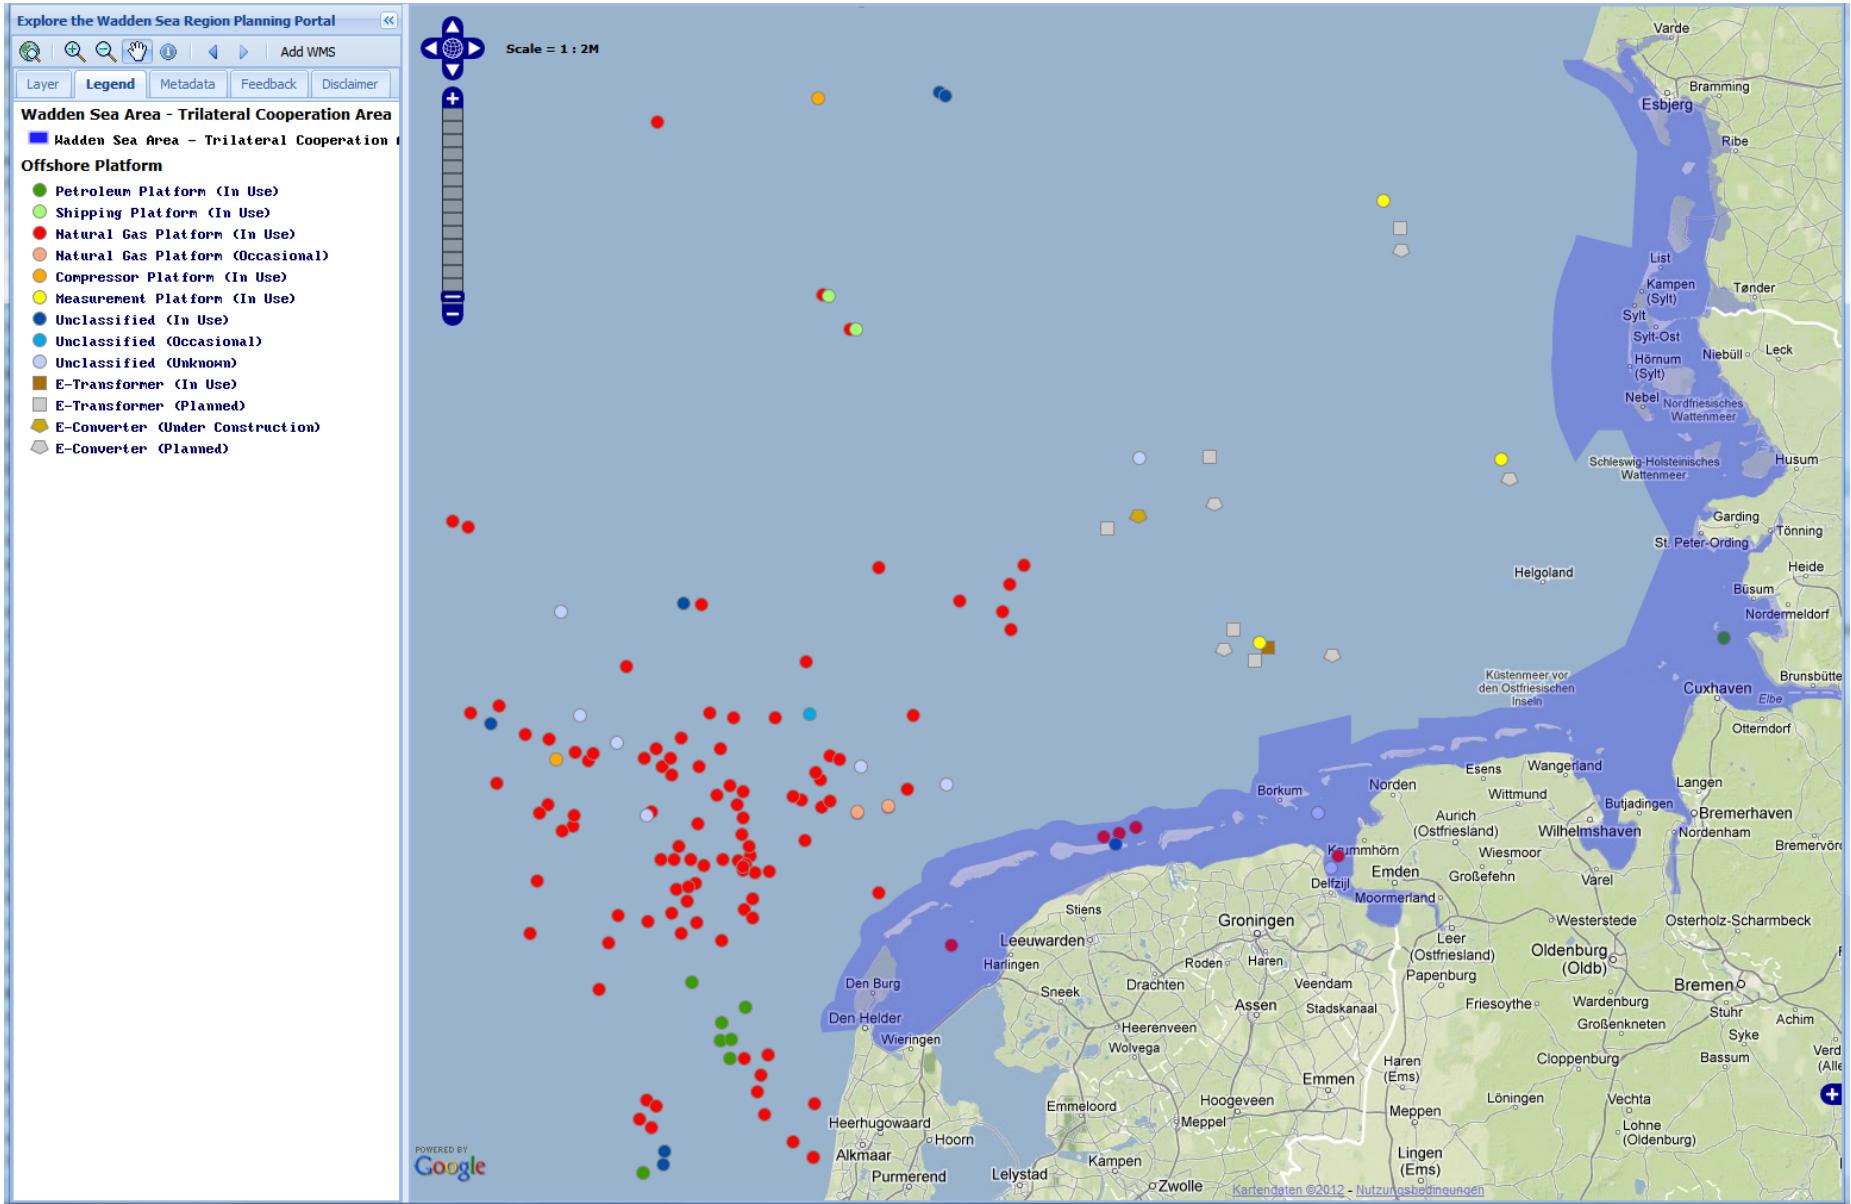

-  Federal authorities & scientific institutes DE
-  State authorities & municipalities SH
-  State authorities & municipalities Nds.
-  Authorities, municipalities & institutes NL
-  Authorities, municipalities & institutes DK
-  European agencies

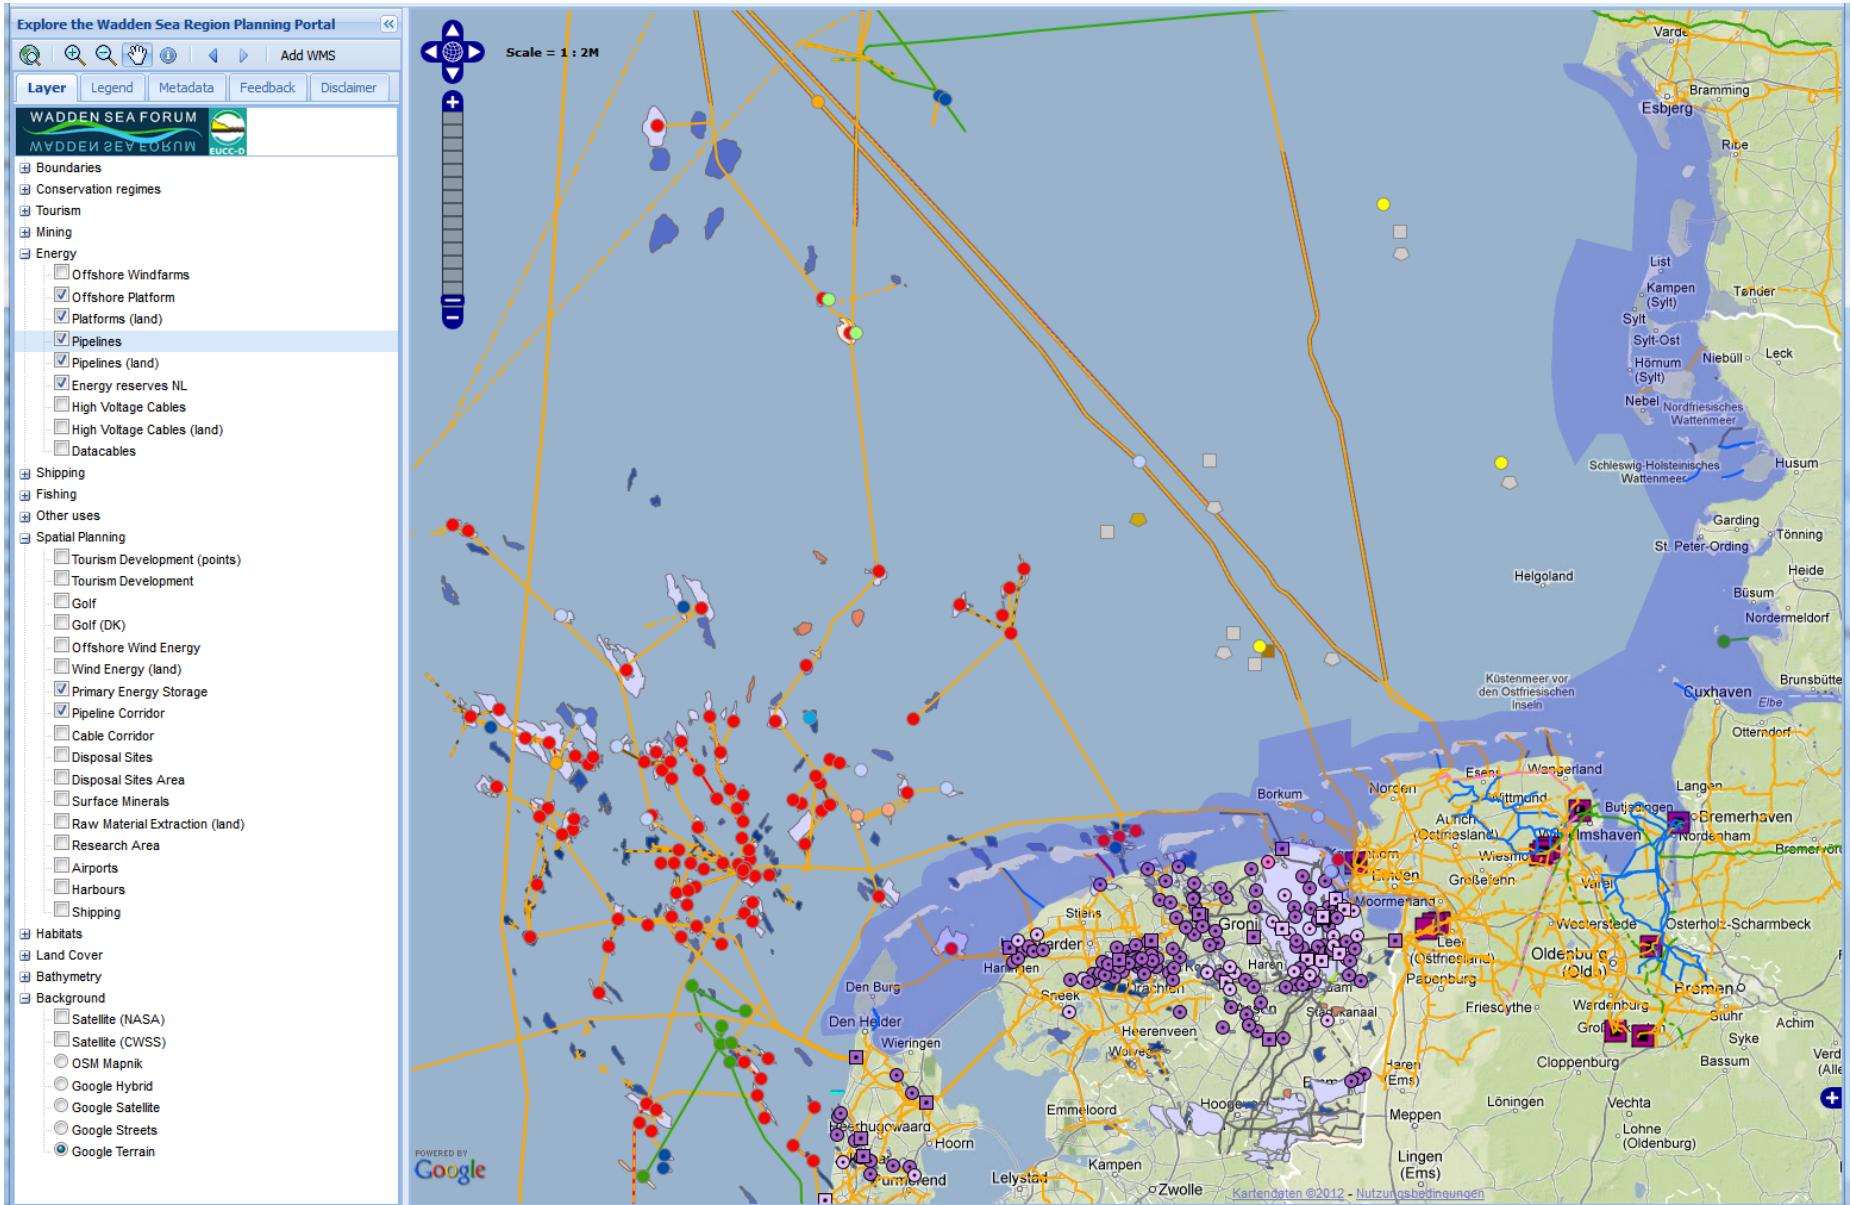

~ 60 data owners/holders

The screenshot shows the Wadden Sea Region Planning Portal map interface. The map displays the Wadden Sea area, which spans across the North Sea coast of Germany, the Netherlands, and Denmark. A large blue shaded region represents the 'Wadden Sea Area - Trilateral Cooperation Area'. The map is overlaid with a green base map showing coastlines, roads, and place names. A legend on the left side lists various layers such as 'Boundaries', 'Conservation regimes', 'Tourism', 'Mining', 'Energy', 'Shipping', 'Fishing', 'Other uses', 'Spatial Planning', 'Habitats', 'Land Cover', 'Bathymetry', and 'Background' layers. The 'Background' layer includes options for Satellite (NASA), Satellite (CWS), OSM Mapnik, Google Hybrid, Google Satellite, Google Streets, and Google Terrain. A scale bar at the top indicates a scale of 1:2M. The map is powered by Google, as indicated by the 'POWERED BY Google' logo at the bottom left. The map is currently zoomed in on the northern part of the Wadden Sea, showing the German and Dutch coasts.

- Raw Material Extraction (land)
- Research Area

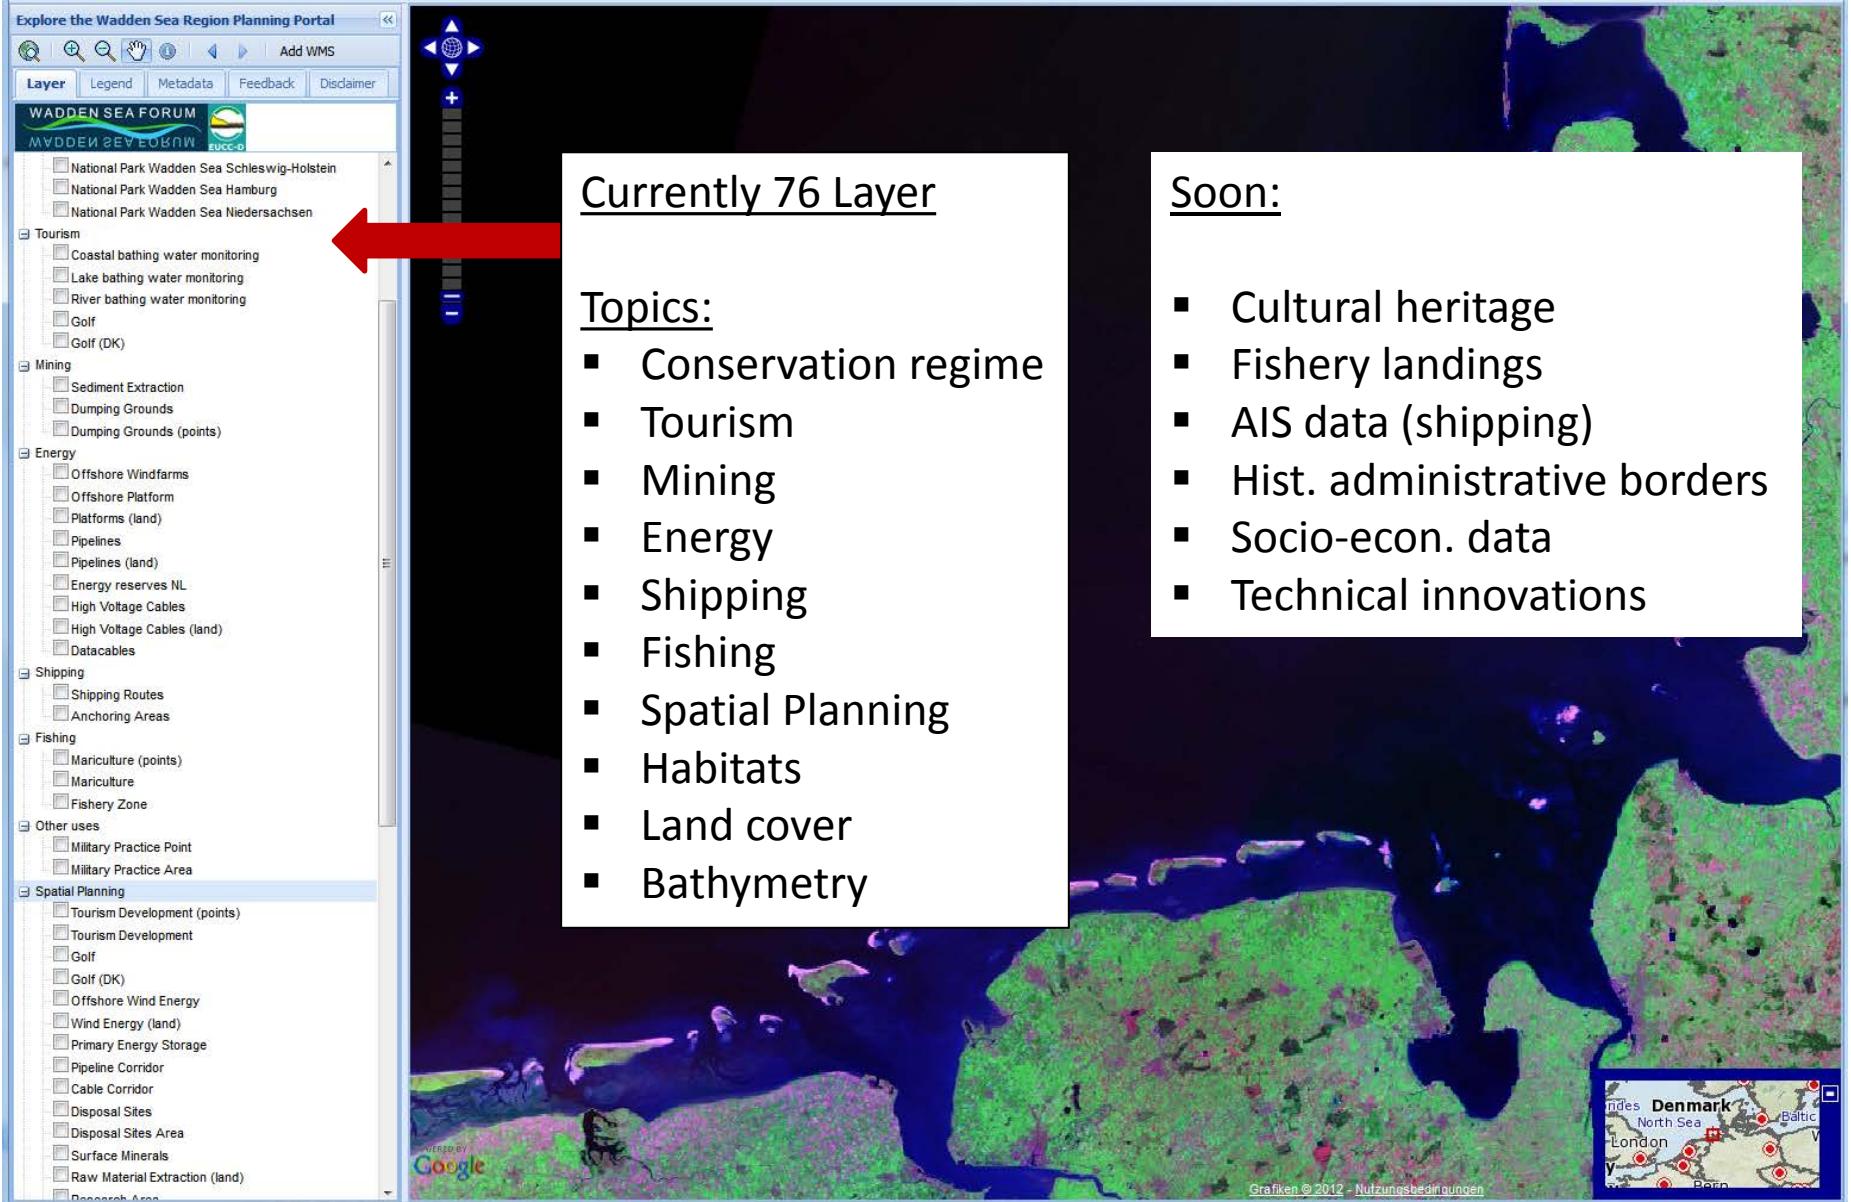

**Currently 76 Layer**

**Topics:**

- Conservation regime
- Tourism
- Mining
- Energy
- Shipping
- Fishing
- Spatial Planning
- Habitats
- Land cover
- Bathymetry

**Soon:**

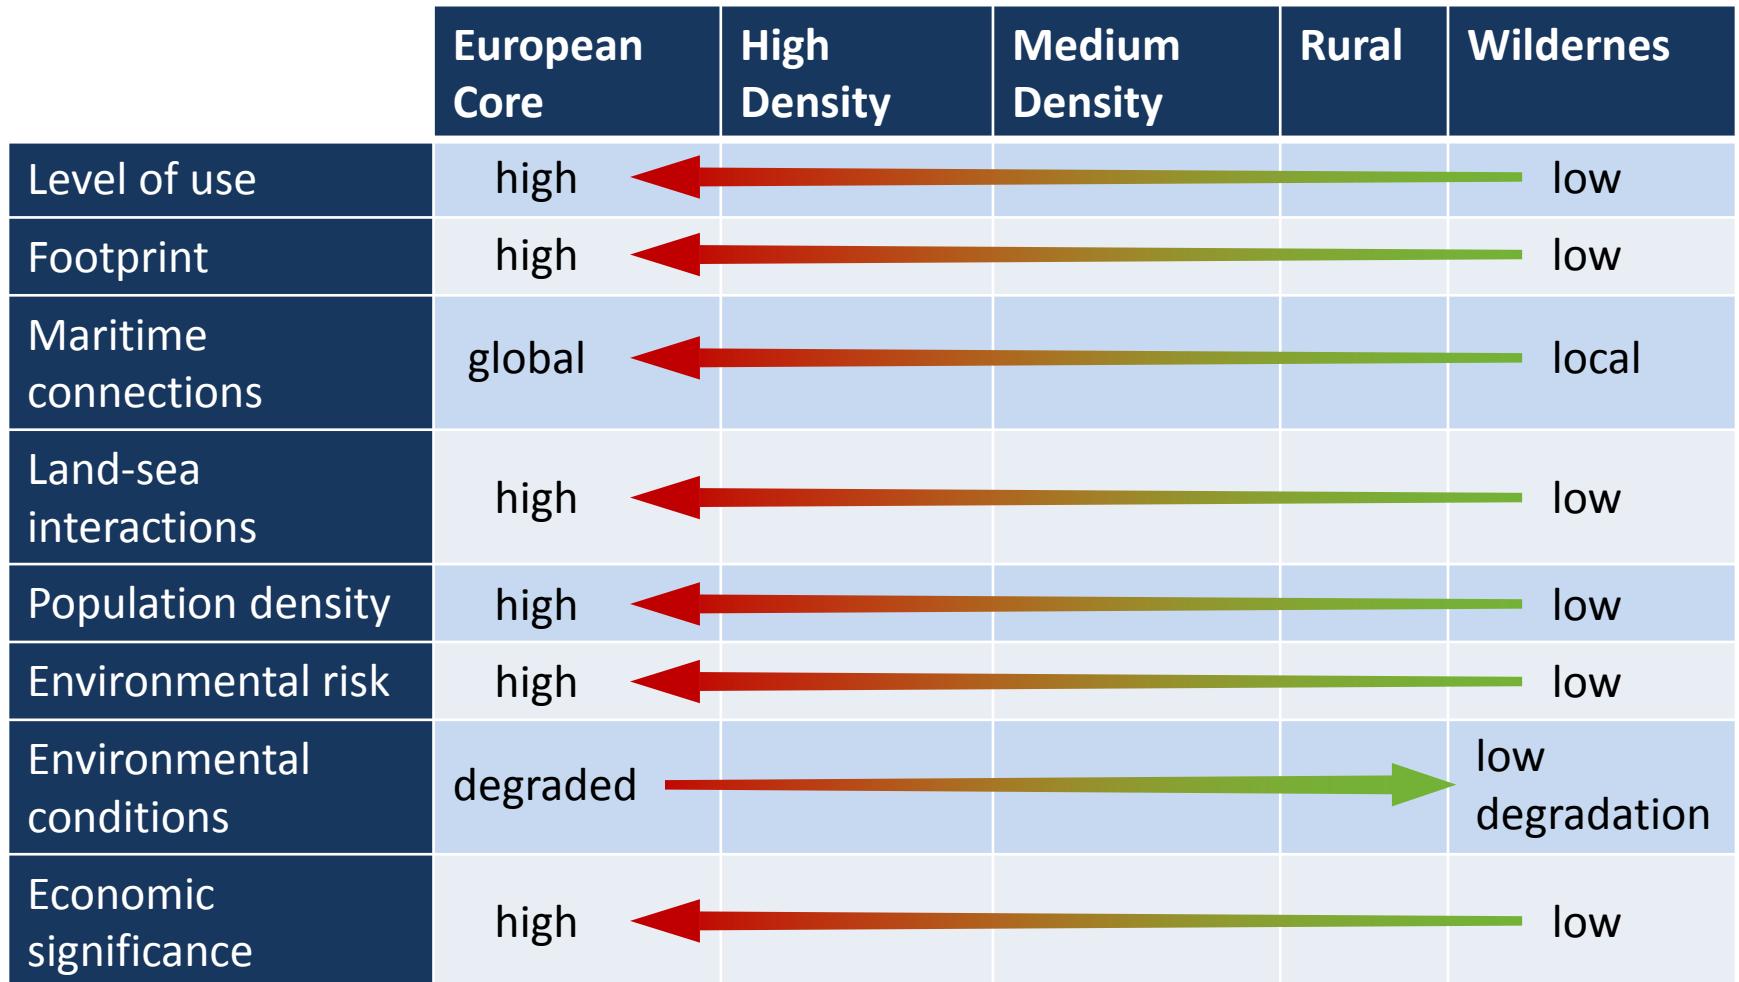

- Cultural heritage
- Fishery landings
- AIS data (shipping)
- Hist. administrative borders
- Socio-econ. data
- Technical innovations

# Towards a spatial typology

- Urban/rural, residential/industrial on land
- Different planning **goals and visions** linked to these categories
- **Legal regulations** differ from category to category
- Different **threshold values** (e.g. noise, pollutants, light) for each category

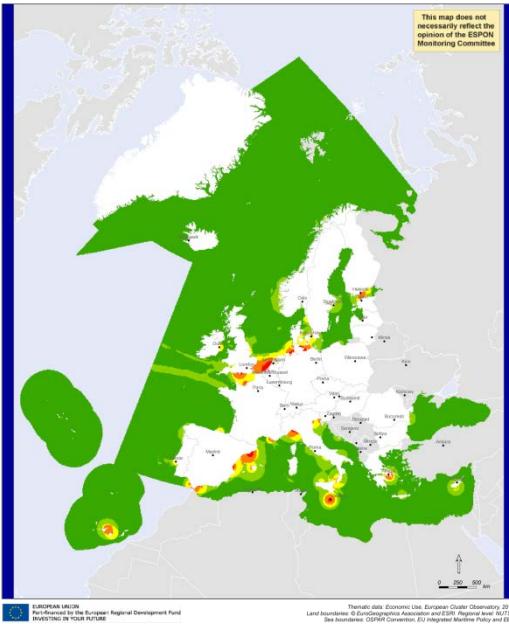

# Approach

# Approach

Transport Composite Map (Flows)

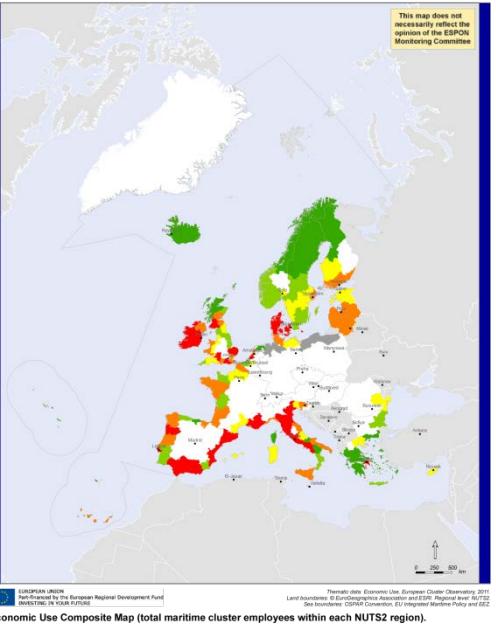

## Environment Composite

Environment composite map

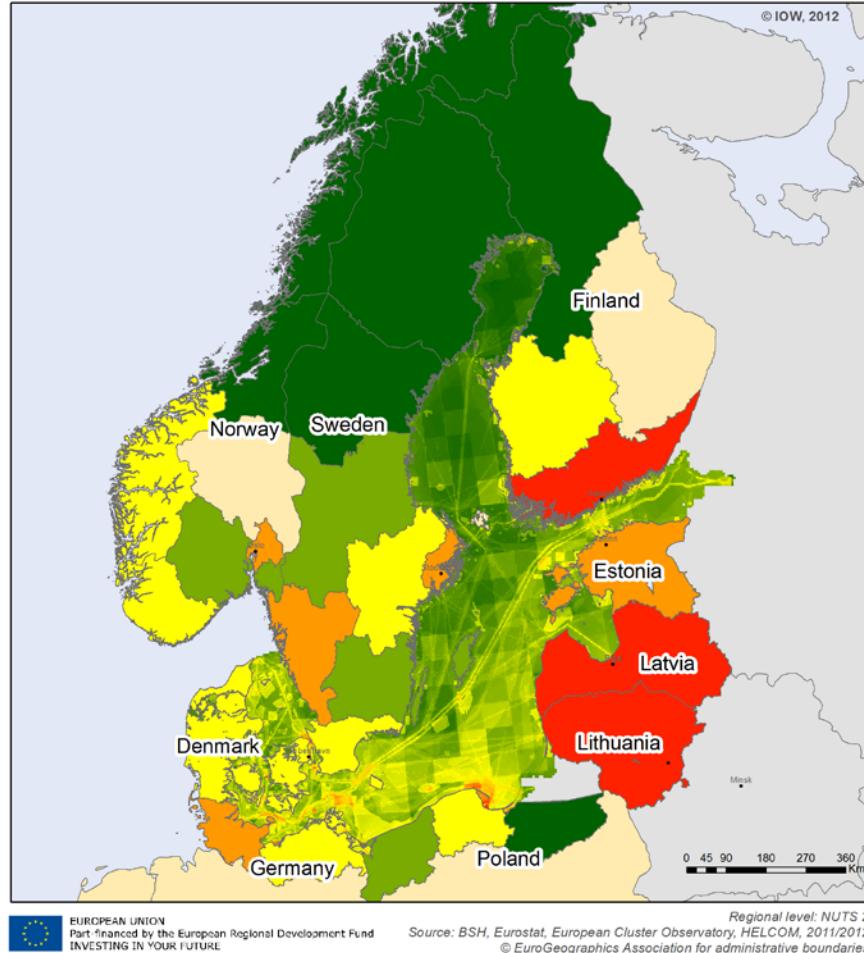

## Maritime employment

Economic use composite map

## Spatial intensities Background data for a Baltic typology

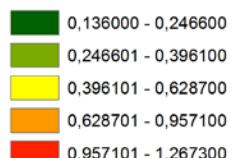

Sea intensity (IMSC + BSII)

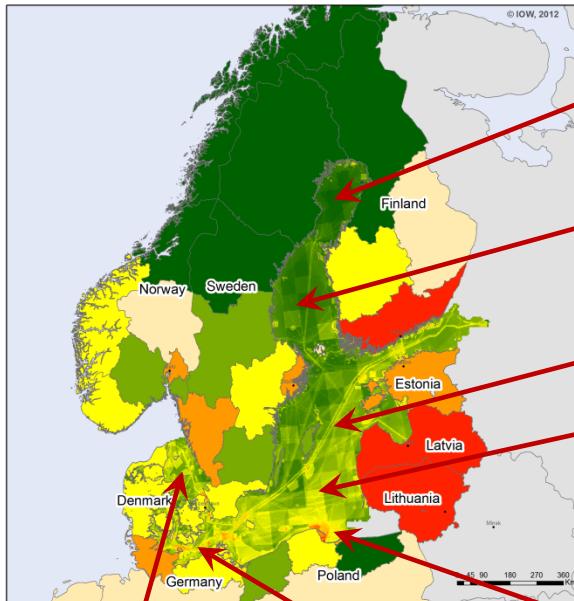

Land intensity

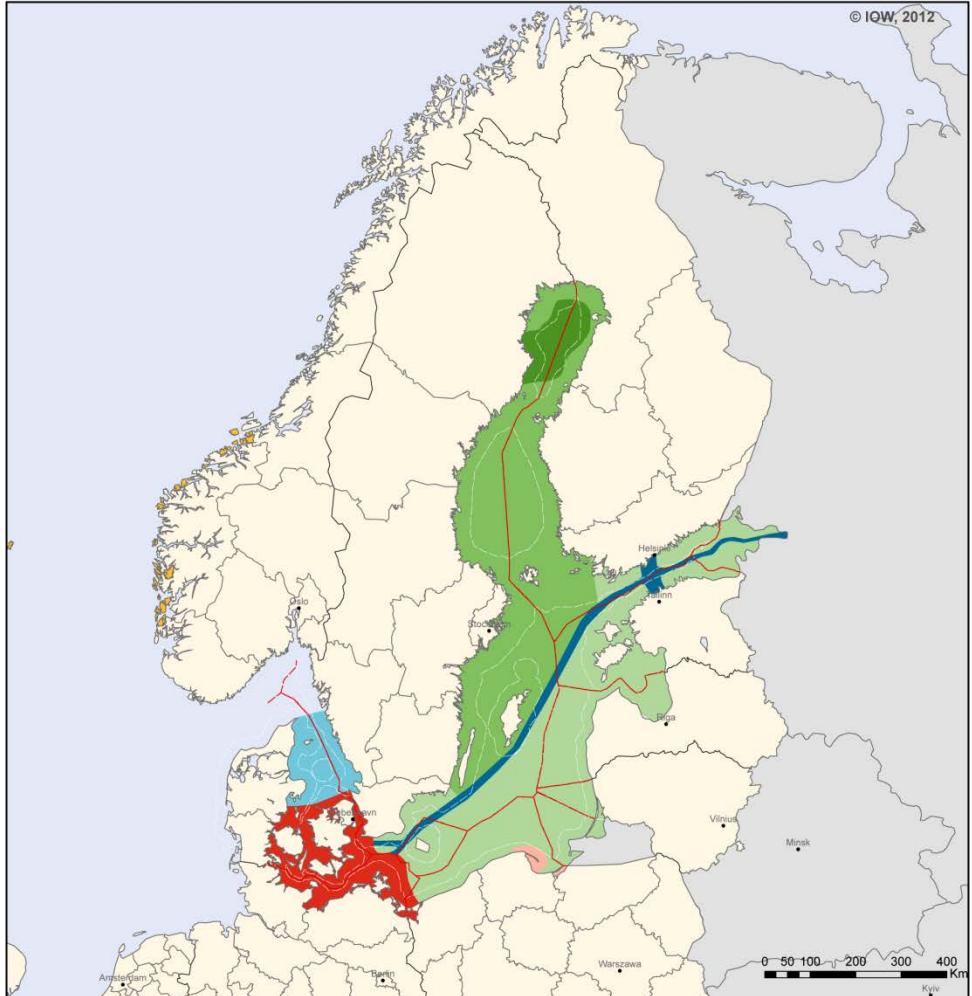

(share of maritime employment per NUTS-2 in total employment (BSR level) [%])

# Quantitative & qualitative gradients

- Nearly untouched, very few environmental impacts, temporary uses only
- Rural (extensive): Main activities are food production (fisheries) and limited maritime traffic
- Motorway of the seas: shipping is dominant
- Rural (intensive): Main activities are food production (fisheries) and limited maritime traffic, both with increased intensity leading to increased environmental impacts
- Local hub: high intensity caused by all kinds of activities, limited to a small region and linked to local urban complexes
- Regional hub: high intensities and a strong node between land and sea (linking Scandinavia to central and western Europe)
- The gate: transition zone, Uses and environmental situation are characterised by the change from North Sea to Baltic
