

1961–2005

FISH AND FISHERY PRODUCTS

WORLD APPARENT CONSUMPTION STATISTICS BASED ON FOOD BALANCE SHEETS

PREPARATION OF THIS DOCUMENT

This document, previously published in hard copy as a FAO Fisheries Circular, starting from the current issue will be disseminated in electronic format as a section of the CD-ROM contained in FAO Fishery and Aquaculture Statistics Yearbook.

The data presented are based on the fishery module of FAOSTAT, the Corporate Database for Substantive Statistical Data of FAO. These statistics have been used to prepare food balance sheets globally, by individual countries, as well as by selected continental and economic aggregates. The role of fish in supplying protein and other nutritional factors to the average diet is also indicated.

The statistical data contained in the document have been compiled by G. Laurenti, Fisheries and Aquaculture Information and Statistics Service (FIES), on the basis of records held in the Fishery Statistical Database in December 2007 and of other official and non-official data and information available to FIES.

Inquiries about the technical content of this publication should be sent to:

Laurenti, G. (comp.)

1961–2005 fish and fishery products: world apparent consumption statistics based on food balance sheets.

In FAO yearbook. Fishery and Aquaculture Statistics. 2007/FAO annuaire. Statistiques des pêches et de l'aquaculture. 2007/FAO anuario. Estadísticas de pesca y acuicultura. 2007.

Rome, FAO. 2009. On CD-ROM.

ABSTRACT

The document summarizes more than four decades of statistics of apparent consumption of fish and fishery products based on supply/utilization accounts, for 223 countries, six continental aggregates, five economic groups and world totals. Data are given for total and per capita supply in live weight on a yearly basis. Indicative nutritional values in terms of animal and total proteins are also provided. For 41 major food fish consuming countries, balances are provided for supply in quantities and nutritional factors of eight main groups of species of similar biological characteristics. A section comprising descriptive and analytical graphs supplements the data.

FOREWORD

From its foundation, FAO has recognized the importance of fish as a food source, particularly for its role in protein supply. In its first report on Fisheries¹ published in 1945, FAO stated that "... fish should be regarded as one of the most important sources of food in any program for raising the nutritional levels of peoples throughout the world". The same report contained the first estimate of average world fish per capita consumption published by FAO which was five pounds of edible fish meat per year (or about 5.4 kg live weight per year) and this probably referred to years before the Second World War. However, no consumption information for individual countries was provided and the report commented that national consumption figures, where available, are often not comparable due to the use of different methodologies. Further, it stated that "Accurate comparison must await the preparation of more complete and standardized international fishery statistics".

The central role of apparent consumption statistics for fish and fishery products in consideration of food security and nutrition issues is illustrated by the fact that such data were disseminated for the International Conference on Nutrition (Rome, 5–11 December 1992), the World Food Summit (Rome, 13–17 November 1996) and the World Food Summit: five years later (Rome, 10–13 June 2002).

International fishery statistics are still far from perfect but they have improved during the last five decades and the promotion of standard definitions, classifications and methodologies by FAO and other organizations has made them more comparable. The data in this publication are based on food balance sheets, which have been constructed from statistics on fish production, disposition of landings, commodity production and trade on the basis of eight major groups of species of similar biological characteristics and nine commodity groups. This publication shows summarized food balance sheets by country, continents and economic groups for years between 1961 and 2005 which allow trends in elements such as per capita fish supply and its contribution to protein supply to be examined. It also presents the composition of the total supply subdivided into major groups of species for the 41 largest consumers of food fish.

World average per capita supply of fish grew from 9.0 kg in 1961 to 16.4 kg in 2005. Fish provides a major source of protein for many countries, including many Small Island Developing States (SIDS). Compared to an average annual compound growth rate in per capita animal protein supply of 0.9 percent during 1961–2005, per capita world fish protein supply showed a rate of 1.2 percent. Some developing countries are particularly dependent on fish for food and all but six of the top 60 fish-consuming countries (in terms of fish as a proportion of animal protein) are from the developing world. It is notable that of 17 countries classified by FAO as most seriously undernourished (i.e. with 35 percent or more of the people undernourished)², seven are amongst the most dependent on fish as a source of animal protein (i.e. fish providing more than 20 percent of animal protein).

¹ **FAO**. 1945. *Five technical reports on food and agriculture: fisheries*. Report of the technical Committee on Fisheries, submitted to the United Nations Interim Commission on Food and Agriculture. Washington. pp. 175–216.

² **FAO**. 2008. *The state of food insecurity in the world 2008*. (Available at www.fao.org).

The contribution of national fishery statistical offices in providing basic statistics required for the construction of these food balance sheets is gratefully acknowledged. Where such basic statistics are lacking or considered unreliable, data from other sources have been utilized, when available, and FAO estimates used when there are no other usable data.

FAO welcomes comments on these statistics and suggestions as to how they can be improved. Comments may be sent to the address below.

INTRODUCTION

The section on food balance sheets presents a compendium of four decades of statistics of apparent consumption for fish and fishery products for 223 countries, six continental aggregates, five economic groups and global totals based on the Supply/Utilization Accounts (SUAs) held in FAOSTAT, the Corporate Database for Substantive Statistical Data of FAO. The Fishery module maintains SUAs for eight groups of primary fishery commodities and nine groups of processed products derived from them for almost all the countries and areas in the world from 1961 to 2005. SUAs contain the estimates of supplies from different sources matched against estimates of different forms of utilization of each product. These series are regularly updated and revised in the light of any new information. Accordingly, the food balance sheets derived from the SUAs of food products are consistent internally. In FAO's work these data are required to meet the requests of its statutory bodies to keep the world's food and nutritional situation under constant review, to update the Organization's analytical work in the field of food and population and to provide the statistical base for the projections of demand and other assessment studies.

The food balance sheets included in this document have been calculated from individual SUAs series for each primary and processed fishery commodity, prepared on a calendar-year basis. In constructing the SUAs and the food balance sheets derived from them, both official and unofficial data available in the databases of the Fisheries and Aquaculture Information and Statistics Service have been used.

In order to facilitate descriptions and analyses of data, tables are structured into three sections and graphs are provided. Section 1 presents summarized food balance sheets for the world in 2005 and long-term series starting from 1961 and ending with 2005, in live weight, for continental aggregates, economic groups and global totals. In each food balance sheet the fish contribution to animal and total protein supply is indicated as a percentage. Section 2 gives, in live weight, the same data as described in Section 1, for 223 countries that represent more than 99 percent of the world population. For 41 major food fish consuming countries, whose aggregated population represents 79 percent of the world total, food fish balance in live weight, including fish-derived calories, proteins and fats, are provided as ten-year averages for each decade and for the six most recent years (2000–2005). These balances, provided by totals and eight main groups of fish species, are presented in Section 3.

The derived consumption data are as reliable as the basic production, trade and domestic utilization data on which they are based. Trends in food availability may reflect improved primary data rather than real changes in food intake. For a full description of the concepts used in the construction of food balance sheets and the major shortcomings of such data as indicators of consumption, the reader may refer to the publications indicated in References (in particular to: "Food balance sheets. A handbook". FAO, 2001, also available at <http://www.fao.org/DOCREP/003/X9892E/X9892E00.HTM>). Nutritional values have been calculated utilizing appropriate standard food composition factors (see Appendix 1).

For information on other food commodities and the role of fish in national diets, see "Consumption" and "SUA/FBS" domains in FAOSTAT at:
<http://faostat.fao.org>

More detailed fishery production and trade statistics of specific products are accessible as online or downloadable databases at :

GENERAL NOTES

Data	The data shown were calculated on the basis of information available to the Fisheries and Aquaculture Information and Statistics Service (FIES) in December 2007. Discrepancies which may occur in certain instances with data held in other sections of the yearbook are due to a different updating timeframe. Where necessary, historical series previously published have been revised. In particular, fishery and aquaculture production statistics for China have been revised significantly downwards starting from 1997, based on the outcome of the National Agricultural Census of 2006, which included for the first time questions related to fisheries and aquaculture, as well as fishery surveys. Revised statistics for the last few years have been published by FAO in March 2009 with the release of the updated databases on capture and aquaculture fisheries production. Food balance sheets have been modified accordingly.
Country names	Countries are indicated by the FAO English name used for statistical purposes (12 and 24 characters). They are listed in alphabetical order and preceded by their FAO Code.
Population	Refers to the present-in-area (de facto) population, i.e. includes all persons physically present within the geographical boundaries of countries, at the mid-point of the reference period. The source of the data is " <i>World population prospects: The 2006 Revision</i> "; published by the Population Division of the United Nations.
Live weight	The weight of finfish and shellfish at the time of their capture or harvest. Calculated on the basis of conversion factors from landed to nominal weight and on rates prevailing among national industries for each type of processing.
Production	Refers to <u>catch and culture</u> of all fish, crustaceans, molluscs and aquatic organisms.
Non-food uses	Include utilization of aquatic products for reduction to meal and oil, for feed and bait, for ornamental purposes, withdrawals from markets and any other non-food use of fish production (e.g. fertilizers, medical uses).
Imports/exports	In accordance with the internationally-recommended practice, imports and exports statistics have been adjusted to include as imports fish caught by foreign fishing vessels and landed in domestic ports and as exports fish caught by domestic fishing vessels and landed directly in foreign ports. World totals of major groups of species may be understated due to statistics being reported as unspecified fish in some national trade statistics. This results also in imbalances between figures for world imports and exports of given major groups.
Stocks	Information on changes in stocks occurring between the production and the retail levels, or in levels of inventories, is very incomplete. In most instances data indicated are the minimum required to avoid a negative balance.
Total food supply	The total fish available for apparent human consumption is derived by using the following equation: total food supply <u>equals</u> production <u>less</u> reduction to meal and other non-food uses, <u>plus</u> imports, <u>less</u> exports and re-exports, <u>plus or less</u> variation in stocks.

All calculations have been made in terms of live-weight equivalent.

Per capita food supply	The estimate of the total supply available for human consumption divided by the population total.
Percentages	Percentages have been calculated on unrounded figures, though such figures are rounded in the tables due to space requirements.
Groups of species	Statistics of apparent consumption for finfish and shellfish are divided into the following eight broad groups of species:

Freshwater and Diadromous fish:	including carps, barbels, tilapias, etc.
Demersal fish:	including sturgeons, eels, salmons, trouts, shads, etc.
Pelagic fish:	including flatfishes, cods, hakes, haddocks, redfishes, sharks, coastal demersal fish, etc.
Marine fish, other:	including anchovies, herrings, sardines, tunas, mackerels, etc.
Crustaceans:	including crabs, lobsters, shrimps, krill, etc.
Molluscs (excl. Cephalopods):	including abalones, oysters, mussels, scallops, clams, etc.
Cephalopods:	including squids, cuttlefishes, octopuses, etc.
Aquatic animals, others:	including frogs, turtles, sea-cucumbers, sea-urchins, etc.

Standard symbols	...	=	data not available/unavailable
	0 ; 0.0	=	magnitude known to be nil or more than zero, but less than half the unit used.

For more detailed information on catch and culture, trade composition and other variables, please refer to the relevant sections of the FAO Yearbook of Fishery Statistics. For information on food consumption in general, please refer to relevant publications included in References (page 433).

NOTES ON GRAPHS

This section includes statistical graphs based on 2005 data and data from the whole time series contained in this report and analysed for the world, continents and economic groups.

NOTES ON SECTION 1

This section provides 2005 food balance sheets for fish and fishery products in live weight for the world total, seven global tables by country, continent and economic groups and two tables by major food fish consuming countries. Balances are also provided from 1961–2005 for 12 tables showing totals for continents and economic groups including and excluding China, one table showing 1961–1991 for the area of former USSR and two tables for world and world excluding China totals. In addition, yearly calculation of percentages of fish contribution to animal and total proteins are provided in each of the above tables.

The quality of data in the time series may vary.

NOTES ON SECTION 2

This section provides historical food balance sheet for fish and fishery products in live weight for 223 countries from 1961 to 2005. As for Section 1, yearly calculation of percentages of fish contribution to animal and total proteins are provided.

The quality of data in the time series may vary.

NOTES ON SECTION 3

This section provides, for the top 41 food fish consuming countries and the world total, food balance sheets in live weight for eight main groups of species (see pages xi and xiii) and the total calculated as ten-year averages for each decade and for the last six most recent years (2000–2005). Fish nutritional factors for calories, proteins and fats are also provided. Stock variations are not indicated.

The quality of data in the time series may vary.

Food fish balance in live weight

World (1965, 1975, 1985, 1995, 2005)

Note: food fish supply equals production, less non-food use, plus imports, less exports, plus or less variation in stocks. Due to the different level of identification of species and products, the non-reporting of trade by some countries and the limited data availability of data on stocks, total imports and exports at world level may not coincide.

Note: data refer to the area that was formerly the Union of the Soviet Socialist Republics. Starting with 1992 the 15 new independent Republics have been included with Asia (Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Uzbekistan) and Europe (Belarus, Estonia, Latvia, Lithuania, Moldova, Russian Federation, Ukraine).

Note: formerly Kampuchea. Starting with 1999 higher food supply is due to the introduction of a new methodology to estimate production of semi-commercial and subsistence fisheries in inland waters. Production figures subject to possible upward revisions to account for small-scale production and rice-field fisheries, presently underestimated.

Note: for statistical purposes, the data for China do not include Hong Kong Special Administrative Region, Taiwan Province of China and Macao Special Administrative Region, shown separately. Starting with 1997, production data have been significantly revised downwards. Non-food uses include indicative estimates of amounts of fish used as direct feed in aquaculture and fur farms.

Note: decreasing supply in most recent years due to the drastic reduction in production following the withdrawal of the fishing fleet from long-distance operations.

Note: the large increase in production since 2002 is due to an improved data collection system, particularly for the artisanal sector.

Note: prior to 1983 supply data are not consistent with results of national consumption surveys, probably due to an underestimated production.

SECTION 3

FISH AND FISHERY PRODUCTS

***FOOD BALANCE SHEETS
BY MAIN GROUPS OF FISH SPECIES
AND FISH NUTRITIONAL FACTORS***

by selected countries

1961/1970, 1971/1980, 1981/1990, 1991/2000 averages
and 2000–2005 series

(live weight)

SECTION 3 Index of food balance sheets by main groups of fish species by selected countries

Country	Page	Country	Page
WORLD	303	Malaysia	366
Australia	306	Mexico	369
Bangladesh	309	Myanmar	372
Brazil	312	Netherlands	375
Cambodia	315	Nigeria	378
Canada	318	Peru	381
Chile	321	Philippines	384
China	324	Poland	387
China, Hong Kong SAR	327	Portugal	390
China, Taiwan Province	330	Russian Federation	393
Congo Dem. Rep. of the	333	Senegal	396
Egypt	336	South Africa	399
France	339	Spain	402
Germany	342	Thailand	405
Ghana	345	Turkey	408
India	348	Uganda	411
Indonesia	351	Ukraine	414
Iran (Islamic Rep. of)	354	United Kingdom	417
Italy	357	United States of America	420
Japan	360	Venezuela, Boliv Rep of	423
Korea, Republic of	363	Viet Nam	426

Note: these 41 countries represent the major consumers over 300,000 tonnes of food fish supply. Their aggregated consumption accounts for 91% of the world total. (See also table on page 55–56 of Section 1). Totals have been calculated on unrounded figures, though such figures are rounded in the tabulations due to space requirements. Countries are indicated by the FAO name for statistical purposes. They are listed in alphabetical order and preceded by FAOSTAT code.

Note: variation in stocks not shown. Discrepancies in the estimated live-weight equivalent of trade are largely due to the fact that export statistics of many developing countries do not provide sufficient details on the level of processing of the traded products or on the classification of species.

Note: formerly Kampuchea. Starting with 1999 higher food supply is due to the introduction of a new methodology to estimate production of semi-commercial and subsistence fisheries in inland waters. Production figures subject to possible upward revisions to account for small-scale production and rice-field fisheries, presently underestimated. Variation in stocks not shown.

Note: for statistical purposes, the data for China do not include Hong Kong Special Administrative Region, Taiwan Province of China and Macao Special Administrative Region, shown separately. Starting with 1997, production data have been significantly revised downwards. Non-food uses include indicative estimates of amounts of fish used as direct feed in aquaculture and fur farms. Variation in stocks not shown.

Appendix 2

Definitions of FAOSTAT fish food commodities

Commodity	Definitions, coverage, remarks
Freshwater and Diadromous, Fresh Barb, burbot, carps, catfish, dace, freshwater breams, freshwater drum, gabies, giant sea perch=barramundi, gourami, gudgeons, mandarin fish, milkfish, Nile perch, paddlefishes, perch, pike, river eels, salmon, shads, sleepers, smelts, snakehead, sturgeons, tenchs, tilapias, trouts and miscellaneous freshwater and diadromous fishes, etc.	Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Freshwater and Diadromous, Frozen Whole	Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Freshwater and Diadromous, Fillets	Fresh raw fillets (all edible).
Freshwater and Diadromous, Frozen Fillets	Frozen raw fillets (all edible).
Freshwater and Diadromous, Cured Examples are: dried salted sturgeon (balyk), smoked salmon, smoked trout.	Salted, dried, smoked whole fish or fillets. The inedible part of the whole fish is 20–50%.
Freshwater and Diadromous, Canned Examples are: salmon canned in brine, unagi (eel) in vacuum packs.	Headed, gutted or filleted in airtight containers, in brine, oil or other medium (all edible).
Freshwater and Diadromous, Preparations Examples are: caviar, red caviar, caviar substitutes, tarama (carp roes), fried and marinated eels.	Fresh or frozen whole fish or fillets then cooked (inedible part is 0–50%). Fish roes (carp, salmon, trout, sturgeon, lumpfish), also mixed with additional ingredients. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, spreads.
Demersal Fish, Fresh Alaska pollack, angler (=monk), Australian salmon, bogue, Bombay duck, bonefish, breams, chimaera, chub, cod, conger, conger/sand eel, croaker, dentex, dogfish, dorie, drums, emperor, filefish, flatfishes, flounder, fusilier, gobies, grenadier (=hoki), grouper, grunt, guitarfish, gurnard, haddock, hake, halibut, icefish, ladyfish, lanternfish, ling, lizardfish, lumbfish, mojarra, moonfish (except Atlantic, African), mullet, orange perch, orange roughy, Pacific perch, pandora, Patagonian toothfish, picarel, plaice, puffer, ray, redfish, rockfish, saithe (=Pollock), sandeel, scabbardfish, sea bass, sea bream, sea catfish, sea perch, shark, skate, smooth-hounds, snapper, soles, spinefeet, steenbras, surgeon, tarpon, tilefish, threadfin, triggerfish, turbot, tusk (=cusk), warehou, weakfish, weever, whitefish, whiting, wolfish (=catfish), wrasse, etc.	Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Demersal Fish, Frozen Whole	Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Demersal Fish, Fillets	Fresh raw fillets (all edible).
Demersal Fish, Frozen Fillets	Frozen raw fillets (all edible).
Demersal Fish, Cured Examples are: stockfish, klipfish, dried shark meat, etc.	Gutted and headed fish or fillets, unsalted or salted, dried (sun/air dried or machine dried) with different levels of residual moisture; brined or pickled using salt, vinegar, sugar and spices, smoked (dry or hot processing). The inedible part of the whole fish is 20–50%. For skin-on fillets the inedible part is 0–5%. This group also includes by-products as fish heads, tails, maws, tongues, fins, etc. used mostly for soups.
Demersal Fish, Canned Examples are: cod, pollack, coalfish canned in oil.	Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium, treated at temperatures adequate to ensure sterilization (all edible).
Demersal Fish, Preparations Examples are: kneaded surimi, kamaboko, crab and shrimp analogues (imitation crab legs and shrimp products), fish minced, sticks, portions, fingers, medallions (battered and breaded), sevicehe, tara (cod roes), mullet bottarga and karasumi.	Fillets (inedible part is 0–50%) or meat of fresh or frozen fish (as in surimi), often cooked (all edible), battered and breaded sticks, portions, medallions prepared also from minced fish. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage (generally 50–60% is fish), sauce, soups, spreads. Roes of mullets or cods.

Commodity	Definitions, coverage, remarks
Pelagic Fish, Fresh Albacore, amberjack, anchovy, barracuda, bonito, bluefish, bumper, butterfish, capelin, cobia, crevallie, dolphin, flyingfish, halfbeak, herring, jack, mackerel, marlin, menhaden, moonfish (Atlantic, African), needlefish, opah, pomfrets, pompano, sailfish, sardinella, sardine (=pilchard), saurie, scad, seerfish, shad, spearfish, sprat, swordfish, tuna, etc.	Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Pelagic Fish, Frozen Whole	Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Pelagic Fish, Fillets	Fresh raw fillets (all edible).
Pelagic Fish, Frozen Fillets	Frozen raw fillets (all edible).
Pelagic Fish, Cured Examples are: smoked herring, salted anchovies, dried sardinella, salted tuna, dried skipjack, dried shad.	Salted, dried, smoked fillets or whole fish (all edible). Fish protein concentrates (edible odourless preparations containing about 80% of proteins and 1% fat).
Pelagic Fish, Canned	Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium treated at temperatures adequate to ensure sterilization (all edible).
Pelagic Fish, Preparations Examples are: anchovy butter, skinned fillets of brine salted sprat in solutions of vinegar, salt, sugar and spices, marinated herrings, fermented fish sauces, fermented fish paste; rollmops, tidbits, shiokara (fermented skipjack viscera); tuna bottarga.	Whole fish boiled, cooked, fermented or marinated (may include a little inedible percentage). Portions, medallions prepared from minced fish with the addition of starchy substances. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, soups, spreads. By-products (heads, etc.) used mostly for soups; fermented viscera. Roes of tuna, herring, capelin.
Marine Fish Other, Fresh Groundfishes (=demersal), pelagic fishes, other marine fishes, etc.	Unspecified fresh raw pelagic and demersal fishes. Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Marine Fish nes Frozen Whole	Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.
Marine Fish Other, Fillets	Fresh raw fillets (all edible).
Marine Fish Other, Frozen Fillets	Frozen raw fillets (all edible).
Marine Fish Other, Cured	Salted, dried, smoked whole fish or fillets (all edible).
Marine Fish Other, Canned	Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium treated at temperatures adequate to ensure sterilization (all edible).
Marine Fish Other, Preparations Examples are: escabeche (fish dried and then marinated), shredded and flaked products, fish sauces (garum, patis, nuoc-mam), fermented fish pastes (nga-pi).	Fillets (inedible part is 0–50%) or meat of fresh or frozen fish (as in surimi), often cooked (all edible), battered and breaded sticks, portions, medallions prepared also from minced fish. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage (generally 50–60% is fish), sauce, soups, spreads. By-products (heads, etc.) used mostly for soups; fermented viscera. Fish roes.
Crustaceans, Fresh Freshwater and seawater crustaceans: barnacle, crabs, crayfish, krill, lobsters, prawns, river prawns and shrimps, sea-spider, shrimps, spiny-rock lobsters, squillids, stomatopods, etc.	Raw whole animals, generally in shell. If the shell is included, the inedible part is around 65%.
Crustaceans, Frozen	Frozen raw or cooked whole animals or meat. If the shell of the whole animal is included, the inedible part is around 65%.

Appendix 2

Commodity	Definitions, coverage, remarks
Crustaceans, Cured Examples are: dried shrimps, salted shrimps.	Whole or peeled, salted, semi-dried, dried or dehydrated, brined, pickled (all edible if shells are removed).
Crustaceans, Canned Examples are: canned king crabs, vacuum-packed shrimp tails.	Meat canned in brine, oil or other medium (all edible).
Crustaceans, Preparations Examples are: fermented shrimp paste (blachan), paste of ground and sun-dried small crustaceans; krupuk (shrimp crackers).	Fresh or frozen meat of animals, cooked (all edible). It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, spreads. Shrimp crackers are obtained with the addition of flours.
Molluscs, excluding Cephalopods, Fresh Abalone, arkshell, clam, cockle, conch, freshwater and marine molluscs, mussel, oyster, pecten, scallop, sea snails, whelk, winkle, etc.	Raw whole animals, including the weight of shell. The inedible part is 50–80%.
Molluscs, Frozen Examples are: adductors of scallops, shelled mussels and clams.	Frozen raw or cooked whole animals in shell or shucked meat. If the shell of the whole animal is included, the inedible part is 50–80%.
Molluscs, Cured Examples are: smoked oysters, dried clams, dried scallops.	Salted, dried, smoked meat (all edible).
Molluscs, Canned Examples are: vacuum-packed or jarred shelled mussels, clams and oysters; oyster and clam chowder and juice.	Meat canned in brine, oil or other medium (all edible) treated at temperatures adequate to ensure sterilization.
Cephalopods, Fresh Cuttlefish, octopus, squid, etc.	Raw whole animals or meat. The inedible part of the whole animal is 20–40% (the highest rate applies to cuttlefish from which bone is removed).
Cephalopods, Frozen	Frozen raw or cooked whole gutted and peeled animals or meat. The inedible part of the whole animal is 20–40% (the highest rate applies to cuttlefish from which bone is removed).
Cephalopods, Cured Examples are: hard-dry-salted squid, pickled squid and cuttlefish.	Salted, dried (often sun-dried after gutting), smoked meat (all edible).
Cephalopods, Canned Examples are: vacuum-packed small octopus, canned squid in own ink or oil.	Raw or precooked meat from gutted or ungutted animals, canned in brine, oil or other medium (all edible) treated at temperatures adequate to ensure sterilization.
Cephalopods, Preparations Examples are: antipasto, salads, semi-preserved, value-added products.	Frozen and battered rings of squids and cuttlefish; semi-preserved, boiled, pickled and marinated; portions for salads and anipasto, mixed also with other species and ingredients (all edible).
Aquatic Animals Others, Fresh Frog, horseshoe crab, jellyfish, sea cucumber, sea-squirt, sea-urchin, tunicates, turtle and other amphibians, arachnoids, echinoderms and miscellaneous invertebrates, etc.	Raw edible parts, fillets, meat, eggs. The inedible part is very significant.
Aquatic Animals Others, Cured	Salted, dried meat (all edible); bêche de mer (eviscerated and steam-cooked or boiled holoturians, dried before consumption).
Aquatic Animals Others, Preparations Examples are: urchin roes, shredded jellyfish, frog legs, turtle soups.	Fresh or frozen whole animals or meat, then cooked. If the shell or skin of the whole animal is included, the inedible part is significant. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, spreads, soups.

Note: remarks concerning the product presentation and the edible part of fishery commodities are provided as an indication of the weight/nutritional losses between live-weight equivalent and product/edible weight. Food composition factors for main species groups in Appendix 1 are based on the nutritional content of the edible portion of individual commodities.
