

School competition - escaperoom

Binke D'Haese
Flanders Marine Institute, Belgium

VLIZ organized a school competition for secondary schools on marine sciences and climate change. Classes worked with different modules on climate and the ocean. Afterwards, they had gathered enough knowledge to escape from the escape room in an authentic bunker. Scientific knowledge, creativity and logical thinking helped to escape faster. This escape room was set up in situ (Ostend), but we are currently working on loanable packages so it can also be played in schools.
