**ABSTRACT.** A compilation of 107 references dealing with fish parasites in New Caledonia permitted the production of a parasite-host list and a host-parasite list. The lists include Turbellaria, Monopisthocotylea, Polyopisthocotylea, Digenea, Cestoda, Nematoda, Copepoda, Isopoda, Acanthocephala and Hirudinea, with 580 host-parasite combinations, corresponding with more than 370 species of parasites. Protozoa are not included. Platyhelminthes are the major group, with 239 species, including 98 monopisthocotylean monogeneans and 105 digeneans. Copepods include 61 records, and nematodes include 41 records. The list of fish recorded with parasites includes 195 species, in which most (ca. 170 species) are coral reef associated, the rest being a few deep-sea, pelagic or freshwater fishes. The serranids, lethrinids and lutjanids are the most commonly represented fish families. Although a list of published records does not provide a reliable estimate of biodiversity because of the important bias in publications being mainly in the domain of interest of the authors, it provides a basis to compare parasite biodiversity with other localities, and especially with other coral reefs. The present list is probably the most complete published account of parasite biodiversity of coral reef fishes. However, it is estimated that the present state of knowledge (370 parasite species) represents only 2% of the possible number of metazoan parasites of fish present in a coral reef environment.

**KEY WORDS:** Check lists, parasite-hostlist, host-parasit list, biodiversity

**RÉSUMÉ:** Une compilation de 107 références traitant de parasites de poissons en Nouvelle-Calédonie a permis de produire une liste parasites-hôtes et une liste hôtes-parasites. Les listes incluent des Turbellaria, Monopisthocotylea, Polyopisthocotylea, Digenea, Cestoda, Nematoda, Copepoda, Isopoda, Acanthocephala et Hirudinea, avec 580 combinaisons hôtes-parasites, correspondant à plus de 370 espèces de parasites. Les Protozoa ne sont pas inclus. Les Plathelminthes sont le groupe le plus important avec 239 espèces, y compris 98 monogènes Monopisthocotylea et 105 digènes. Les copépodes incluent 61 mentions, et les nématodes 41. La liste des poissons mentionnés avec des parasites inclut 195 espèces, parmi lesquels la plupart (environ 170 espèces) sont associées aux récifs coralliens, le reste étant quelques espèces de mer profonde, pélagiques ou d'eau douce. Les Serranidae, Lethrinidae et Lutjanidae sont les familles les plus représentées. Bien qu'une liste de mentions publiées ne fournisse pas une estimation fiable de la biodiversité à cause du biais important des publications, qui sont produites principalement dans les domaines d'intérêt des auteurs, elle forme une base pour comparer la biodiversité parasitaire avec d'autres localités, et surtout avec d'autres récifs coralliens. Cette liste est probablement la plus complète publiée pour la biodiversité parasitaire des poissons des récifs coralliens. Toutefois, on estime que l'état actuel de nos connaissances (370 espèces de parasites) ne représente que 2% du nombre possible de parasites métazoaires de poissons présents dans l'environnement des récifs coralliens.

### INTRODUCTION

Coral reefs are areas of great biodiversity (REAKA-KUDLA, 1997). The lagoon around the mainland of New Caledonia is the largest coral lagoon in the World and its fauna is probably one of the best known, with 8,299 metazoan species recorded and identified, including 1,694 in-shore fishes (FRICKE & KULBICKI, 2007). Thus, New Caledonia is a good example of coral reef biodiversity and results obtained at this location provide a basis for comparison with other coral reef environments.

Parasites generally represent a neglected compartment of diversity, because they are small, hidden on or within their hosts, and need more detailed observation and preparation than

vertebrates and large invertebrates to be identified with precision.

In this study, I attempt to evaluate what is currently known about the fauna of fish parasites in New Caledonia, and to estimate the extent of our current knowledge in comparison to a total, exhaustive (and probably impossible to reach) inventory of the parasite fauna.

### MATERIALS AND METHODS

The present evaluation is based only on published records. Although every effort has been made to compile a complete list, it is still possible that a few references have been overlooked. Among the studies of fish parasites in

New Caledonia, a major work was the study on digeneans by Manter, who came for three weeks in 1963 and then described more than 40 species (DURIO & MANTER, 1968a, b, 1969; MANTER, 1969). Unfortunately, many fishes from which Manter collected digeneans were not identified to the species level. The vernacular New Caledonian names used by Manter have been 'translated' into binomials (JUSTINE, 2007a). A number of papers by various authors on various groups and mainly based on the Australian fauna, include records from New Caledonia. The present author began a detailed study of fish parasites in 2003 and collected specimens from all groups; most recent papers have benefited from these collections. Host names have been updated using FishBase (FROESE & PAULY, 2009). Papers with insufficient levels of taxonomic identification (MORAND et al., 2000; SALSAL et al., 2007) are not included within the lists.

Table 1 includes a parasite-host list, in which all parasites recorded are listed in taxonomical order (and alphabetical order within each group) and their fish host is indicated.

Monogeneans have been separated as Monopisthocotylea and Polyopisthocotylea, because these two groups are generally very different in size and are easily distinguished at the time of collection, and also because doubts about the monophyly of monogeneans (JUSTINE, 1998; PARK et al., 2007) suggest that these two groups should be treated independently. Monogenean genera (*Haliotrema*, etc.) sometimes included in the Dactylogyridae are here considered as members of the Ancyrocephalidae. Cestodes have been separated as three subgroups, or orders (Tetraphyllidea, Bothriocephalidea and Trypanorhyncha) because these classes represent very different forms and are not collected using the same methods (larval trypanorhynchs are generally encysted and require special manipulation); pseudophyllideans are classified as Bothriocephalidea (KUCHTA et al., 2008).

Species counts generally include unidentified species, but these are counted only once. This certainly minimizes the number of species, since it is likely, for example, that most *Haliotrema* spp. or *Euryhaliotrema* spp. (monogeneans) represent different species.

Table 2 is a host-parasite list, in which each fish has its parasites listed. Elasmobranch and teleost fish are separated, and fish families are listed in alphabetical order, as are species within each family. When a parasite species has been recorded under several different names, it is designated "as other name" in the lists, to avoid its record being counted twice. Absence of known hosts in the case of certain isopods comes from the fact that some of these parasites were collected in dredges.

## RESULTS

A total of 109 references include records of fish parasites in New Caledonia. These represent more than 1,500 published pages (excluding books).

Table 1 (the parasite-host list) includes 371 species of parasites (unidentified species have been counted as one species, thus minimizing the count). The total number of host-parasite combinations is 580. Table 3 summarizes the

numerical importance of each parasitic group. Platyhelminthes is the major group with 240 species, representing 65% of the total number of species, followed by copepods (61 records, 16%) and nematodes (41 records, 11%). Monopisthocotylean monogeneans, with 98 species, include only 4 families (Ancyrocephalidae, Capsalidae, Diplectanidae and Monocotylidae) but diplectanids alone include 58 species. Digeneans include 20 families and 105 species; the most speciose families are the Opecoelidae (18 species) and Hemiuiridae (17). Nematodes include 9 families; the most speciose families are the Camallanidae (10 species) and Philometridae (9).

Table 2 (the host-parasite list) includes 195 fish species with parasites recorded. This includes 14 elasmobranch and 181 teleost species. The families with the most species mentioned with parasites are the serranids (30), lethrinids (16), lutjanids (15) and chaetodontids (15). The fish species with the highest numbers of published parasite species are the balistid *Pseudobalistes fuscus* (12 species), the lethrinid *Lethrinus nebulosus* (13), and the serranids *Epinephelus fasciatus* (15), *E. maculatus* (16), and *E. cyanopodus* (31). Exhaustive counts of parasite species have been attempted previously for a few species of serranids (Table 4). Although impressive in the number of species listed, these lists are not complete; it has been suggested that about 100 species of parasites might be present in the large species of groupers (serranids) (JUSTINE & SIGURA, 2007). However, these estimates are of interest in showing that the present list of published records includes only a small proportion of the actual parasite biodiversity.

Most fish recorded here are from inside the lagoon and thus should be considered as coral reef-associated species. A few fish (4) mentioned in the list have been collected in freshwater and are indicated as such. However, most freshwater species on Pacific islands have at least a part of their life-cycle in sea and thus it is not aberrant to include them in the list. A few species (16) are deep-sea fishes and are indicated as such; they harbour less than 40 parasite species. The serranid *Epinephelus chlorostigma* is mentioned as a deep-sea fish because the specimen was actually caught on the outer slope of the barrier reef, but may be encountered in shallow waters (FRICKE & KULBICKI, 2007). In contrast, there is no doubt that the deep-sea sharks, the lutjanids *Etelis* spp. and *Pristipomoides* spp. and the hoplichthyid *Hoplichthys citrinus* are strictly confined to deep-sea environments. A few species (2-4) are pelagic fish, such as the large scombrids (tunas and swordfish). Finally, of the 195 fish species recorded with parasites, more than 170 can be considered as coral-associated lagoon fish; parasite species recorded from coral reef fish are about 350.

## DISCUSSION

A faunal list based on published references certainly does not show the actual importance of biodiversity. A main reason is that authors publish on the groups that are of interest to them, for personal or scientific reasons. As an example, the high numbers of diplectanid monogeneans or trichoso-

moidid nematodes recorded are simply an indication of the interest of the present author in these groups, and does not indicate that the parasite fauna of New Caledonia is specially rich in these families. Another reason is that trivial groups, which are known 'everywhere' and considered as of little interest, are often simply not mentioned; this is probably the case for anisakid nematode larvae, which are present in nearly all fish examined, but rarely mentioned. Tetracyclid cestode larvae or gnathiid isopod larvae are also good example of widespread biodiversity, generally neglected in publications. For certain groups, we already know that biodiversity (the actual number of species) is much higher than the one already described (e.g. see Table 2 in KRITSKY *et al.*, 2009) but taxonomical work is still in progress and unpublished.

However, a list based on references shows the extent of knowledge which is actually available to the scientific community, and allows comparisons with other geographical localities, i.e. we can compare parasite biodiversity in New Caledonia with other localities only on the basis of published works. Table 5 summarizes available references on fish parasites in the Indo-Pacific. Most studies listed here do not allow comparison of the relative parasite biodiversity in coral reefs, because they include fishes from freshwater or from noncoral associated environments. The only list which was specifically limited to a coral-reef environment, Heron Island on the Great Barrier Reef (LESTER & SEWELL, 1989), was the result of both a one-week meeting and field work by a group of parasitologists in 1986 and a compilation of the available literature at that period. This list included only 122 fish species (compared to about 170 coral-reef fishes in the present compilation); the number of records (i.e. host-parasite combinations) is the same in both studies (580) but this includes all parasites, including Protozoa, on Heron Island, compared with only Metazoa in New Caledonia. The number of parasite species on Heron Island was not indicated, and many identifications were at the family level only; it can be estimated to be about 300, in comparison to 370 in New Caledonia. Therefore, the present study is likely to be the most complete compilation of metazoan parasites of coral reef fishes in the literature.

#### **An evaluation of global parasite biodiversity in coral reef fishes**

##### **orders**

Evaluations of numbers of parasites per fish species have been proposed by various authors (Table 5). The early global estimate of Rohde of 20,000 parasite species (including Protozoa) for 1,000 fish species on Heron Island is generally considered reasonable by most authors. A prediction of 100,000–200,000 helminth species for the 20,000 species of fish worldwide has also been made (BOUCHET, 2006).

The number of fish species in New Caledonia is about 2,200. Precise counts include 1,694 "in-shore fishes", i.e. fishes encountered at less than 100 m depth (FRICKE & KULBICKI, 2007), which we may generally consider as "coral reef associated" and 414 bathyal fishes (RICHER DE FORGES & JUSTINE, 2006); and pelagic species should be added to these par-

tial totals. The fish species recorded with at least one parasite represent about 9% (195: 2,200) of the total number of fish.

The author's present work in New Caledonia (about 1,800 host-parasite combinations, largely unpublished) suggests that an average of 10 species of parasites per fish species is a reasonable estimate (only Metazoa, excluding Protozoa). Large species might harbour as many as 100 species of parasites (JUSTINE & SIGURA, 2007). This allows a prediction of about 17,000 parasite species to be made for the 1,700 reef fishes of New Caledonia. With 350 species recorded, the present bibliographical list highlights the paucity of our knowledge: just 2% of the parasites have been recorded.

Finding 2% of the total number of parasites on 9% of the total number of fish does not suggest that the fish investigated had specially few parasites; this rather shows that most published records were incidental and not the product of an exhaustive survey.

In addition to fish parasite, coral reef include a high number of other parasites or symbionts, such as copepods associated with echinoderms or corals (BOXSHALL & HUYS, 2007), or parasitic molluscs (BOUCHET, 2006; BOUCHET *et al.*, 2002); the present compilation probably represent a small part of parasite biodiversity in coral reefs.

Many comments have been done about the 'taxonomic impediment' i.e. the difficulty to describe biodiversity. I will just add yet another estimate: given that these 2% needed 1,500 published pages, the publication of parasite biodiversity of New Caledonia would need about 75,000 pages. Taxonomists, who know what amount of work is sometimes hidden behind a single figure or a sentence in a diagnosis, will understand.

#### **ACKNOWLEDGEMENTS**

Many authors cited here provided literature. Geoff Boxshall and Jean-Paul Trilles edited the copepods and isopods, respectively. Although the journal recommends that all authors of taxa should be cited, the Editor agreed that the reference list does not include the authors of fish taxa (which are cited without year as it is usual in the parasitological literature), and that authors of parasite taxa are cited only after 1950; in spite of this, authors of taxa represent more than 80 references. Ian Beveridge edited the English.

This compilation includes all publications known to the author (including in press) in November 2009.

 as *Nybelinia aequidentata* [larva]  
*Dendrochirus zebra* PALM & BEVERIDGE, 2002

*Nybelinia* sp. [larva]  
*Lethrinus rubrioperculatus* JUSTINE, 2007e

## NEMATODA

(alphabetical order of families and species; 10 families recorded;  
 43 species recorded + unidentified species)

## Unidentified Nematoda

*Epinephelus morrhua* JUSTINE, 2008c

## ANISAKIDAE

*Raphidascaris (Ichtyiascaris) nemipteri* Moravec & Justine, 2005 [adult]

*Nemipterus furcosus* MORAVEC & JUSTINE, 2005a

*Hysterothylacium cenaticum* (Bruce & Cannon, 1989)

Moravec & Justine, 2005 [adult]  
*Tetrapturus audax* MORAVEC & JUSTINE, 2005a

*Terranova scoliodontis* (Baylis, 1931) Johnston & Mawson, 1945 [adult]

*Galeocerdo cuvier* MORAVEC & JUSTINE, 2006b

*Terranova* sp. [larva]

*Epinephelus cyanopodus* SIGURA & JUSTINE, 2008

## CAMALLANIDAE

## Unidentified Camallanidae

*Diagramma pictum* BAILLON, 1991

*Camallanus carangis* Olsen, 1954

*Nemipterus furcosus* MORAVEC et al., 2006a

*Parupeneus ciliatus* MORAVEC et al., 2006a

*Upeneus vittatus* MORAVEC et al., 2006a

*Camallanus cotti* Fujita, 1927

*Awaous guamensis* MORAVEC & JUSTINE, 2006a

*Kuhlia marginata* [larva] MORAVEC & JUSTINE, 2006a

*Procamallanus (Spirocamallanus) longus* Moravec, Justine & Rigby, 2006

*Zebrasona scopas* MORAVEC ET AL., 2006a

*Procamallanus (Spirocamallanus) variolae* Moravec, Justine & Rigby, 2006

*Epinephelus fasciatus* MORAVEC ET AL., 2006a

*Variola albimarginata* MORAVEC ET AL., 2006a

*Procamallanus (Procamallanus) pacificus* Moravec, Justine, Würtz, Taraschewski & Sasal, 2006

*Anguilla obscura* MORAVEC ET AL., 2006b

*Anguilla reinhardtii* MORAVEC ET AL., 2006b

*Procamallanus (Spirocamallanus) sp. 1*

*Parapercis hexophtalma* MORAVEC ET AL., 2006a

*Procamallanus (Spirocamallanus) sp. 2*

*Lethrinus ravus* MORAVEC ET AL., 2006a

*Procamallanus (Spirocamallanus) sp. 3*

*Scolopsis bilineata* MORAVEC et al., 2006a

*Procamallanus* sp.

*Epinephelus cyanopodus* SIGURA & JUSTINE, 2008

## CAPILLARIIDAE

Capillariidae Gen. sp. 7 of Moravec, 2001

*Siganus doliatus* MORAVEC, 2001

Capillariidae Gen. sp. 8 of Moravec, 2001

*Naso unicornis* MORAVEC, 2001

## CUCULLANIDAE

*Cucullanus bourdini* Petter & Le Bel, 1992

*Aprion virescens* PETTER & LE BEL, 1992

*Pristipomoides filamentosus* PETTER & LE BEL, 1992

*Pristipomoides flavipinnis* PETTER & LE BEL, 1992

Cucullanidae, unidentified

*Bodianus perditio* LIM & JUSTINE, 2007

## CYSTIDICOLIDAE

*Ascarophis (Dentiascarophis) adioryx* Machida, 1981

*Neoniphon sammara* MORAVEC & JUSTINE, 2009b

*Sargocentron spiniferum* MORAVEC & JUSTINE, 2009b

*Ascarophis (Similarascarophis) richeri* Moravec & Justine, 2007

*Hoplichthys citrinus* MORAVEC & JUSTINE, 2007a

*Ctenascarophis lesteri* Crites, Overstreet & Maung, 1993

*Katsuwonus pelamis* CRITES et al., 1993

*Metabronema magnum* (Taylor, 1925) Yorke & Maplestone, 1926

*Gnathanodon speciosus* MORAVEC & JUSTINE, 2007b

*Spinitectus (Paraspinitectus) sp.*

*Albula glossodonta* MORAVEC & JUSTINE, 2009b

## GNATHOSTOMATIDAE

*Echinocephalus sinensis* Ko, 1975

*Aetobatus narinari* MORAVEC & JUSTINE, 2006b

*Echinocephalus overstreeti* Deardoff & Ko, 1983

*Urogymnus asperimus* [not *Taeniura meyeni*, erroneous]  
 MORAVEC & JUSTINE, 2006b

## GUYANEMIDAE

*Ichthyofilaria novaecaledoniensis* Moravec & Justine, 2009

*Hoplichthys citrinus* MORAVEC & JUSTINE, 2009a

## PHILOMETRIDAE

***Philometra cyanopodi* Moravec & Justine, 2008**

- Epinephelus cyanopodus* MORAVEC & JUSTINE, 2008  
 as *Ph. lateolabracis* (Yamaguti, 1935)  
*Epinephelus cyanopodus* MORAVEC & JUSTINE, 2005b

***Philometra dentigubernaculata* Moravec & Justine, 2009**

- Tylosurus crocodilus* MORAVEC & JUSTINE, 2009a

***Philometra fasciati* Moravec & Justine, 2008**

- Epinephelus fasciatus* MORAVEC & JUSTINE, 2008  
 as *Ph. lateolabracis* (Yamaguti, 1935)  
*Epinephelus fasciatus* MORAVEC & JUSTINE, 2005b

***Philometra lagocephali* Moravec & Justine, 2008**

- Lagocephalus sceleratus* MORAVEC & JUSTINE, 2008

***Philometra lethrini* Moravec & Justine, 2008**

- Lethrinus genivittatus* MORAVEC & JUSTINE, 2008, 2009a  
*Lethrinus miniatus* MORAVEC & JUSTINE, 2009a  
*Lethrinus variegatus* MORAVEC & JUSTINE, 2009a

***Philometra ocularis* Moravec, Ogawa, Suzuki, Miyazaki & Donai, 2002**

- Epinephelus areolatus* MORAVEC & JUSTINE, 2008, 2009a  
*Epinephelus coioides* MORAVEC & JUSTINE, 2005b  
*Epinephelus cyanopodus* MORAVEC & JUSTINE, 2005b  
*Epinephelus rivulatus* MORAVEC & JUSTINE, 2005b  
*Variola louti* MORAVEC & JUSTINE, 2005b

***Philometra priacanthi* Moravec & Justine, 2009**

- Priacanthus hamrur* MORAVEC & JUSTINE, 2009a

***Philometra tenuicauda* Moravec & Justine, 2009**

- Lagocephalus sceleratus* MORAVEC & JUSTINE, 2009a

***Philometra* sp. Moravec & Justine, 2008**

- Lutjanus vitta* MORAVEC & JUSTINE, 2008

## RHABDOCHONIDAE

## Unidentified Rhabdochonidae

- as *Huffmanella balista*, female [erroneous]  
*Abalistes stellatus* JUSTINE, 2007b

## TRICHOSOMOIDIDAE

***Huffmanella balista* Justine, 2007**

- Abalistes stellatus* JUSTINE, 2007b

***Huffmanella branchialis* Justine, 2004**

- Nemipterus furcosus* JUSTINE, 2004

***Huffmanella filamentosa* Justine, 2004**

- Gymnocranius grandoculis* JUSTINE, 2004

***Huffmanella lata* Justine, 2005**

- Carcharhinus amblyrhynchus* JUSTINE, 2005a

***Huffmanella longa* Justine, 2007**

- Gymnocranius grandoculis* JUSTINE, 2007b

***Huffmanella ossicola* Justine, 2004**

- Bodianus busellatus* JUSTINE, 2007b  
*Bodianus loxozonus* JUSTINE, 2004, 2007b  
*Bodianus perditio* JUSTINE, 2007b;  
 LIM & JUSTINE, 2007

***Huffmanella* sp.**

- Pentapodus aureofasciatus* JUSTINE, 2004, 2007b

## COPEPODA

(alphabetical order of families and species)

The compilation by Boxshall & Huys (2007) does not indicate hosts. This paper was based in part on collection by the present author, so additional host information was indicated here as "present paper".

13 families recorded; 61 species recorded + unidentified species

## UNIDENTIFIED FAMILY

**Copepoda, unidentified larvae**

- Abalistes filamentosus* RANDALL & JUSTINE, 2008b  
*Cephalopholis aurantia* x  
*C. spiloparaea* (hybrid) RANDALL & JUSTINE, 2008a  
*Cephalopholis somnerati* JUSTINE, 2007d  
*Lethrinus xanthochilus* JUSTINE, 2007e

**Copepoda, unidentified adults**

- Cephalopholis urodeta* JUSTINE, 2008a

## BOMOLOCHIDAE

***Pumiliopes capitulatus* Cressey & Boyle, 1973**

- No host indicated; present paper: *Rastrelliger kanagarua*  
 BOXSHALL & HUYS, 2007

## CALIGIDAE

***Alanlewisia fallolunulus* (Lewis, 1967) Boxshall, 2008**

- Naso unicornis* BOXSHALL, 2008

***Alebion carchariae* Krøyer, 1863**

- No host indicated; present paper: *Galeocerdo cuvier*  
 BOXSHALL & HUYS, 2007

***Alebion gracilis* Wilson, 1905**

- No host indicated; present paper: *Stegostoma fasciatum*  
 BOXSHALL & HUYS, 2007

***Anuretes justinei* Venmathi Maran, Ohtsuka & Boxshall, 2008**

- Plectorhynchus lineatus* VENMATHI MARAN et al., 2008

***Avitocaligus assurgericola* Boxshall & Justine, 2005**

- Assurger anzac* BOXSHALL & JUSTINE, 2005

***Caligus bonito* Wilson, 1905**

- Katsuwonus pelamis* ROHDE et al., 1980

***Caligus confusus* Pillai, 1961**

- No host indicated; present paper: *Caranx papuensis*  
 BOXSHALL & HUYS, 2007

***Caligus cordyla* Pillai, 1963**

- No host indicated; present paper:  
*Carangoides fulvoguttatus* BOXSHALL & HUYS, 2007

- Caligus coryphaenae* Steenstrup & Lütken, 1861**  
No host indicated; present paper: *Coryphaena hippurus*  
BOXSHALL & HUYS, 2007
- Caligus infestans* Heller, 1868**  
No host indicated; present paper:  
*Scomberomorus commerson* BOXSHALL & HUYS, 2007
- Caligus isonyx* Steenstrup & Lütken, 1861**  
No host indicated; present paper: *Sphyraena flavicauda*  
BOXSHALL & HUYS, 2007
- Caligus lobodes* (Wilson, 1911) Pillai, 1985**  
No host indicated; present paper: *Sphyraena barracuda*  
BOXSHALL & HUYS, 2007
- Caligus lethrinicola* Boxshall & El-Rashidy, 2009**  
*Lethrinus rubrioperculatus* BOXSHALL & EL-RASHIDY, 2009  
**as *Caligus* cf. *mauritanicus* Brian, 1924**  
*Lethrinus rubrioperculatus* BOXSHALL & HUYS, 2007;  
JUSTINE, 2007e
- Caligus novocaledonicus* Kabata, 1968**  
No host indicated BOXSHALL & HUYS, 2007
- Caligus productus* Dana, 1852**  
*Acanthocybium solandri* ROHDE et al., 1980  
*Katsuwonus pelamis* ROHDE et al., 1980
- Gloiopotes hygomianus* Steenstrup & Lütken, 1861**  
No host indicated; present paper:  
*Acanthocybium solandri* BOXSHALL & HUYS, 2007
- Gloiopotes watsoni* Kirtisinghe, 1934**  
No host indicated; present paper: *Tetrapturus audax*  
BOXSHALL & HUYS, 2007
- Lepeophtheirus* sp.**  
*Bodianus perditio* LIM & JUSTINE, 2007  
*Epinephelus malabaricus* JUSTINE & SIGURA, 2007
- Paralebion elongatus* Wilson, 1911**  
No host indicated; present paper:  
*Triaenodon obesus* BOXSHALL & HUYS, 2007
- Pseudanuretes fortipedis* Kabata, 1965**  
No host indicated; present paper:  
*Pomacanthus semicirculatus* BOXSHALL & HUYS, 2007
- DISSONIDAE**  
***Dissonus excavatus* Boxshall, Lin, Ho, Ohtsuka, Venmathi  
Maran & Justine, 2008**  
*Bodianus perditio* BOXSHALL et al., 2008  
**as *Dissonus* sp.**  
*Bodianus perditio* LIM & JUSTINE, 2007  
*Macolor niger* BOXSHALL et al., 2008
- Dissonus heronensis* Kabata, 1966**  
*Pseudobalistes fuscus* BOXSHALL et al., 2008
- Dissonus manteri* Kabata, 1966**  
*Epinephelus cyanopodus* BOXSHALL et al., 2008  
*Epinephelus maculatus* BOXSHALL et al., 2008;  
JOURNO & JUSTINE, 2006  
*Plectropomus laevis* BOXSHALL et al., 2008  
*Plectropomus leopardus* BOXSHALL et al., 2008;  
JUSTINE & EUZET, 2006
- EUDACTYLINIDAE**  
***Nemesis robusta* (van Beneden, 1851) Heller, 1868**  
No host indicated; present paper:  
*Carcharhinus amblyrhynchos* BOXSHALL & HUYS, 2007
- HATSCHEKIIDAE**  
***Hatschekia balistae* Nunes-Ruivo, 1954**  
No host indicated; present paper:  
*Abalistes stellatus* BOXSHALL & HUYS, 2007  
No host indicated; present paper:  
*Balistoides conspicillum* BOXSHALL & HUYS, 2007  
No host indicated; present paper:  
*Pseudobalistes fuscus* BOXSHALL & HUYS, 2007
- Hatschekia cernae* Goggio, 1905**  
No host indicated BOXSHALL & HUYS, 2007  
*Epinephelus cyanopodus* SIGURA & JUSTINE, 2008
- Hatschekia* cf. *plectropomi* Ho & Dojiri, 1978**  
No host indicated; present paper:  
*Plectropomus laevis* BOXSHALL & HUYS, 2007  
No host indicated; present paper:  
*Plectropomus leopardus* BOXSHALL & HUYS, 2007;  
JUSTINE & EUZET, 2006
- Hatschekia sphyraeni* Pillai, 1964**  
No host indicated; present paper:

TABLE 2.  
Host-Parasite list

57 families recorded with parasites; 177 species recorded with parasites

**HOST UNKNOWN (OR NOT INDICATED)**

Copepoda <i>Caligus novocaledonicus</i>	BOXSHALL & HUYS, 2007
Isopoda <i>Aega alazon</i>	BRUCE, 2004
Isopoda <i>Aega coroo</i>	BRUCE, 2007
Isopoda <i>Aega hamiota</i>	BRUCE, 2004
Isopoda <i>Aega kixalles</i>	BRUCE, 2004
Isopoda <i>Aega monophthalma</i>	BRUCE, 2007
Isopoda <i>Aega plebeia</i>	BRUCE, 2007
Isopoda <i>Aega rickbruscai</i>	BRUCE, 2004
Isopoda <i>Aega</i> sp.	BRUCE, 2004
Isopoda <i>Aega vigilans</i>	BRUCE, 2007
Isopoda <i>Anilocra australis</i>	BRUCE, 2007
Isopoda <i>Anilocra gigantea</i>	TRILLES, 1972
Isopoda <i>Anilocra longicauda</i>	BRUCE, 2007
Isopoda <i>Syscenus latus</i>	BRUCE, 2007
Isopoda <i>Syscenus moana</i>	BRUCE, 2007

**ELASMOBRANCHII**

(alphabetical order of families and species;  
9 families recorded with parasites; 14 species recorded with parasites)

**CARCHARHINIDAE**

***Carcharhinus amblyrhynchus* (Bleeker)**

C. Trypanorhyncha <i>Otobothrium parvum</i>	BEVERIDGE & JUSTINE, 2007c
Nematoda <i>Huffmanella lata</i>	JUSTINE, 2005a
Copepoda <i>Nemesis robusta</i>	BOXSHALL & HUYS, 2007

***Carcharhinus plumbeus* (Nardo)**

Copepoda <i>Pandarus smithii</i>	BOXSHALL & HUYS, 2007
----------------------------------	-----------------------

***Galeocerdo cuvier* (Péron & Lesueur)**

C. Trypanorhyncha <i>Otobothrium curtum</i>	BEVERIDGE & JUSTINE, 2007c
Nematoda <i>Terranova scoliodontis</i>	MORAVEC & JUSTINE, 2006b
Copepoda <i>Alebion carchariae</i>	BOXSHALL & HUYS, 2007
Copepoda <i>Kroyeria dispar</i>	BOXSHALL & HUYS, 2007
Copepoda <i>Nesippus crypturus</i>	BOXSHALL & HUYS, 2007
Copepoda <i>Nesippus tigris</i>	BOXSHALL & HUYS, 2007

***Negaprion acutidens* (Rüppell)**

C. Trypanorhyncha <i>Paragrillotia spratti</i>	BEVERIDGE & JUSTINE, 2007a
--	----------------------------

***Prionace glauca* (Linnaeus)**

Copepoda <i>Echthrogaleus coleoptratus</i>	BOXSHALL & HUYS, 2007
Copepoda <i>Pandarus satyrus</i>	BOXSHALL & HUYS, 2007

**CENTROPHORIDAE**

***Centrophorus* sp. [Deep-sea]**

C. Tetracyllidea, unidentified adults	BEVERIDGE & JUSTINE, 2006
C. Trypanorhyncha <i>Gilquinia minor</i>	BEVERIDGE & JUSTINE, 2006
C. Trypanorhyncha <i>Sagittirhynchus aculeatus</i>	BEVERIDGE & JUSTINE, 2006

**DASYATIDAE**

***Urogymnus asperimus* (Bloch & Schneider) [not *Taeniura meyeri* Müller & Henle, erroneous]**

Nematoda <i>Echinocephalus overstreeti</i>	MORAVEC & JUSTINE, 2006b
--	--------------------------

**HEMIGALEIDAE**

***Triaenodon obesus* (Rüppell)**

C. Trypanorhyncha <i>Otobothrium parvum</i>	BEVERIDGE & JUSTINE, 2006
Copepoda <i>Paralebion elongatus</i>	BOXSHALL & HUYS, 2007

**HEXANCHIDAE**

***Hexanchus nakamurai* Teng [Deep-sea]**

C. Trypanorhyncha <i>Paragrillotia apecteta</i>	BEVERIDGE & JUSTINE, 2007a
Isopoda <i>Aega angustata</i>	TRILLES & JUSTINE, 2004

**LAMNIDAE**

***Isurus oxyrhynchus* Rafinesque**

Copepoda <i>Dinemoura latifolia</i>	BOXSHALL & HUYS, 2007
-------------------------------------	-----------------------

**MYLIOBATIDAE**

***Aetobatus narinari* (Euphrasen)**

Monopisthocotylea <i>Clemacotyle australis</i>	MARIE & JUSTINE, 2005
Monopisthocotylea <i>Decacotyle elpora</i>	MARIE & JUSTINE, 2005
Monopisthocotylea <i>Decacotyle octona</i>	MARIE & JUSTINE, 2005
Monopisthocotylea <i>Thaumatocotyle pseudodasybatis</i>	MARIE & JUSTINE, 2005, 2006
C. Tetracyllidea <i>Acanthobothrium aetiobatis</i>	BAER & EUZET, 1962
Nematoda <i>Echinocephalus sinensis</i>	MORAVEC & JUSTINE, 2006b

**SQUALIDAE**

***Squalus megalops* Macleay [Deep-sea]**

C. Tetracyllidea, unidentified adults	BEVERIDGE & JUSTINE, 2006
C. Trypanorhyncha <i>Gilquinia robertsoni</i>	BEVERIDGE & JUSTINE, 2006
Copepoda <i>Demoleus latus</i>	BOXSHALL & HUYS, 2007
Copepoda <i>Pseudopandarus gracilis</i>	BOXSHALL & HUYS, 2007
Isopoda <i>Aega angustata</i>	TRILLES & JUSTINE, 2004
Isopoda <i>Aega webbi</i>	TRILLES & JUSTINE, 2004
as <i>Aega urotoma</i> Bruce, 2007	
Isopoda <i>Aega</i> cf. <i>deshaysiana</i>	TRILLES & JUSTINE, 2004

***Squalus* cf. *megalops* [Deep-sea]**

C. Trypanorhyncha <i>Chimaerarhynchus rougetae</i>	OLSON et al., 2010; PALM et al., 2009
--	--

**Squalus melanurus Fourmanoir & Rivaton [Deep-sea]**

Monopisthocotylea *Triloculotrema chisholmae* JUSTINE, 2009a  
 Polyopisthocotylea Hexabothriidae, unidentified

JUSTINE, 2009a

C. Tetraphyllidea, unidentified adults

BEVERIDGE & JUSTINE, 2006

C. Trypanorhyncha *Gilquinia* sp. BEVERIDGE & JUSTINE, 2006

C. Trypanorhyncha *Vittirhynchus squali*

BEVERIDGE & JUSTINE, 2006

Copepoda *Pseudopandarus gracilis* BOXSHALL & HUYS, 2007

Isopoda *Aega angustata* TRILLES & JUSTINE, 2004

**STEGOSTOMATIDAE*****Stegostoma fasciatum* (Hermann)**

C. Trypanorhyncha *Hornelliella amandalei*

BEVERIDGE & JUSTINE, 2007b

C. Trypanorhyncha *Mixonybelinia southwelli*

BEVERIDGE & JUSTINE, 2007b

C. Trypanorhyncha *Pseudolacistorhynchus heroniensis*

BEVERIDGE & JUSTINE, 2007b

C. Trypanorhyncha *Pseudolacistorhynchus namus*

BEVERIDGE & JUSTINE, 2007b

Copepoda *Alebion gracilis* BOXSHALL & HUYS, 2007

**ACTINOPTERYGII**

(alphabetical order of families and species; 48 families recorded with parasites; 163 species recorded with parasites)

**ACANTHURIDAE*****Acanthurus blochii* Valenciennes**

Digenea *Parvipyrum acanthuri* BRAY & JUSTINE, 2008a

***Acanthurus xanthopterus* Valenciennes**

Turbellaria, unidentified JUSTINE et al., 2009b

***Naso* sp. “unicorn fish”**

Digenea *Hapladena tanyorchis* DURIO & MANTER, 1969

Digenea *Quadrifoliovarium pritchardae* MANTER, 1969

***Naso unicornis* (Forsskål)**

Turbellaria *Piscinquilinus* sp. JUSTINE et al., 2009b

Monopisthocotylea *Dioncopseudobenedenia kala*

PERKINS et al., 2009

Nematoda Capillariidae Gen. sp. MORAVEC, 2001

Copepoda *Alanlewisia fallolumulus* BOXSHALL, 2008

***Zebrasoma veliferum* (Bloch)**

Digenea *Affecauda salacia* HALL & CRIBB, 2004b

***Zebrasoma scopas* (Cuvier)**

Nematoda *Procamallanus (Spirocamallanus) longus*

MORAVEC et al., 2006a

**ACROPOMATIDAE*****Synagrops* sp. [Deep-sea]**

Isopoda *Aega musorstom* BRUCE, 2004

**ALBULIDAE*****Albula glossodonta* (Forsskål)**

Nematoda *Spinitectus (Paraspinitectus)* sp.

MORAVEC & JUSTINE, 2009b

**ANGUILLIDAE*****Anguilla obscura* Günther [freshwater]**

Digenea *Stegodexamene anguillae* MORAVEC & JUSTINE, 2007c

Nematoda *Procamallanus (Procamallanus) pacificus*

MORAVEC et al., 2006b

***Anguilla reinhardtii* Steindachner [freshwater]**

Digenea *Stegodexamene anguillae*

MORAVEC & JUSTINE, 2007c

Nematoda *Procamallanus (Procamallanus) pacificus*

MORAVEC et al., 2006b

**ANTENNARIIDAE****Antennariidae sp. (recruiting larvae)**

Digenea Hemiuridae (immature unidentifiable)

CRIBB et al., 2000

**APOGONIDAE*****Apogon angustatus* (Smith & Radcliffe)? (recruiting larvae)**

Digenea Didymozoidae larva B

CRIBB et al., 2000

***Apogon coccineus* Rüppell (recruiting larvae)**

Digenea Didymozoidae larva A

CRIBB et al., 2000

Digenea Didymozoidae larva B

CRIBB et al., 2000

Digenea Didymozoidae larva E

CRIBB et al., 2000

TABLE 3

Species of fish parasites recorded from New Caledonia. From the parasite-host list in Table 1. The total of Platyhelminthes species is 240 (65% of the total).

Group	Families	Species
Turbellaria	1	1
Monopisthocotylea	4	98 (27%)
Polyopisthocotylea	5	8
Digenea	20	105 (29%)
Cestoda Bothriocephalidea	1	2
Cestoda Tetraphyllidea	1	6
Cestoda Trypanorhyncha	5	20
Nematoda	10	41 (11%)
Copepoda	13	61 (16%)
Isopoda	4	27 (7%)
Acanthocephala	1	1
Hirudinea	1	1
Total		371

TABLE 4

Biodiversity of parasites in three species of groupers (Family Serranidae). First number is the number of species recorded in New Caledonia; second number in parenthesis is the total number of species recorded in all locations. From JUSTINE & SIGURA (2007). 'Others' include Hirudinea and Acanthocephala.

	Monogenea	Digenea	Cestoda	Nematoda	Copepoda	Isopoda	Others	Total
<i>Epinephelus maculatus</i>	12 (12)	7 (7)	1 (2)	1 (1)	3 (3)	1 (1)	0 (0)	25 (26)
<i>Epinephelus cyanopodus</i>	6 (7)	4 (10)	2 (2)	4 (8)	5 (5)	2 (2)	0 (0)	23 (34)
<i>Epinephelus malabaricus</i>	11 (15)	2 (11)	2 (3)	1 (4)	2 (8)	0 (1)	0 (2)	18 (44)

TABLE 5

Available references on fish parasites in the Indo-Pacific Region. Some studies may include freshwater fish and their parasites. Protozoa are included in all studies except the present one.

Reference	Parasite groups	Locality	Number of fish species with parasites	Number of fish species present	Number of parasites
Arthur & Te, 2006	all	Viet Nam	130	1300 *	453
Arthur & Lumanlan Mayo, 1997	all	Philippines	172	2030 *	201
Arthur & Ahmed, 2002	all	Bangladesh	85	528 *	147
Beumer et al., 1983	all	Australia (including Antarctic territories)	448	? *	496
Lester & Sewell, 1989	all	Heron Island, Australia	122	ca 2,000	ca 300 species ** 580 records
<b>This study</b>	<b>Metazoa</b>	<b>New Caledonia</b>	<b>195</b>	<b>ca 2,000</b>	<b>371 species 580 records</b>

\* include freshwater fishes \*\* difficult to evaluate since many identifications are at the family level only.

Includes ca 140 species of monogeneans.

**TABLE 6**  
Numerical evaluations of fish parasite biodiversity in the literature.

Parasite groups	Number of parasite per fish species	Total number of parasites	Comment	Reference
Monogeneans	3	882	Marine fish, Peninsular Malaysia	Lim, 1998
Monogeneans	5		Estimate, freshwater fishes, neotropics	Kritsky in Whittington, 1998
Monogeneans	1	25,000 species in the World	considered an underestimate by author	Whittington, 1998
Digeneans	2.73	3,800 in 2,000 fish species	Great Barrier Reef, Australia	Cribb & Bray, 1998
All Metazoa	3.1		Marine fish, German coastal waters	Palm & Klimpel, 2006
All Metazoa	5.4		Marine fish, Canada	Poulin, 2004
All Metazoa	3.0		Marine fish, New Zealand	Poulin, 2004
All, including Protozoa	20 *	20,000 for 1,000 fish species	Marine fish, Heron Island, Queensland, Australia	Rohde, 1976

\* not expressly indicated in the text; calculated.
