Directorate-General for Agriculture and Rural Development

AGRICULTURE IN THE EUROPEAN UNION

STATISTICAL AND ECONOMIC INFORMATION

2009

March 2010

Foreword

Each year the Commission Directorate- General for Agriculture and Rural Development publishes the "Agriculture in the European Union - Statistical and economic information". A large part of the report is devoted to statistical information on Community agriculture. This is drawn up on the basis of information from Eurostat and data collected by the Directorate-General for Agriculture and Rural Development.

The statistical information presented here covers a wide range of subjects: the economic situation in agriculture, structures, trade, markets, financial aspects and rural development. An introductory chapter gives an overview of the 2009 agricultural year. It includes a wide range of statistical information on agriculture in the 27 Member States and in the accession Countries for EU membership.

Contents

Foreword---------- 3
The 2009 agricultural year ---------- 13
Statistical and economic information ---------- 31
Codification of the tables ---------- 32
Key to symbols, names and abbreviations ---------- 33
Currency units used in this report ---------- 36
Observations on statistical method ---------- 38
Remarks ---------- 42

Table No

1 **INTRODUCTION**
1.0.1 Exchange rates

2 BASIC DATA
2.0.1.1 Basic data – key general statistics
2.0.1.2 Basic data – key agricultural statistics

3 **ECONOMIC DATA**
3.1 **The agricultural economy**
3.1.1 Shares of products in agricultural production
3.1.2 Individual Member States and Candidate Countries' share in agricultural production
3.1.3 Farm inputs: breakdown by Member State and Candidate Countries
3.1.4 Situation of the:
(a) output of the agricultural industry
(b) consumption of inputs
(c) gross added value at basic prices
(d) factor income
3.1.5 Value of agricultural production, crop production and livestock production
3.1.6 Movements in output volume in the agricultural activities sector, in intermediate consumption, in gross added value (at basic prices) and in net added value (at basic prices)
3.1.7 Movement in the implicit index of output prices in the agricultural industry
value/volume (nominal)
value/volume, deflated by GDP implicit price index (real)
3.1.8 Evolution of the implicit price index of intermediate consumption:
value/volume (nominal)
value/volume, deflated by GDP deflator (real)
3.1.9 Movements in productivity of intermediate consumption and terms of trade
3.1.10 Gross fixed capital formation and gross value-added in agriculture at basic prices
3.1.12 Indices of real income from agricultural factors, per annual work unit (AWU)
3.1.13 Volume of agricultural labour in annual work units (AWUs)
3.1.14.1 Changes in intermediate consumption by volume
3.1.14.2 Input (volume) indices
3.1.15 Agriculture by region: major economic indicators and the share of individual products

3.2 **FADN**
3.2.1 The farm accountancy data network – Explanatory note
3.2.2 The eight types of farming: shares of each enterprise in total output
3.2.3 Accountancy results by type of farming
3.2.4 Results by economic size of holding in the EU

3.3 **Prices and production costs**
3.3.1 Agricultural prices and amounts of Community aid (beginning of marketing year)
3.3.2 Producer prices for agricultural products in the EU (excl. VAT)
3.3.3 Producer price indices (excl. VAT)
3.3.4 Annual rate of change of:
(a) consumer prices for foodstuffs and beverages
(b) producer prices for agricultural products
3.3.5.1 Input prices (excl. VAT)
3.3.6 Agricultural input prices and producer prices (excl. VAT)
3.3.7 Price indices for feedingstuffs, fertilizers and soil improvement, fuels and lubricants, and investments in machinery (excl. VAT)
3.3.8 Market value of agricultural land (parcels)
3.3.9 Rents for agricultural land
3.3.10 Trend of purchase prices of agricultural inputs (excl. VAT)
3.3.13.1 Producer prices in the Member States and Candidate Countries

3.4 **Financial aspects**
3.4.1 Budgetary expenditure on the common agricultural policy
3.4.2 EAGGF Guarantee and Guidance expenditure (2004 to 2006), EAGF and EAFRD expenditure (2008) by Member State
3.4.3.1 Agricultural and Rural Development' Policy Area expenditure
3.4.4 Breakdown of EAGF expenditures by sector, according to the economic nature of the measures
3.4.5 Quantity and value of products in public intervention stores of the intervention agencies
3.4.9 Implementation of budget (Rural Development)
3.4.10 National expenditures for agriculture

3.5 **Structures**
3.5.1 *Employment in agriculture*
3.5.1.1 Employment in agriculture: statistical sources and applications
3.5.1.2 'Persons employed' in 'agriculture, hunting, forestry and fishing'
3.5.1.3 Employment in agriculture and in the other sectors
3.5.1.4. Employment in agriculture and in the other sectors: structures compared
3.5.1.5.1 Employment in agriculture: persons working on agricultural holdings
3.5.1.5.2 Employment in agriculture: breakdown by type of labour
3.5.1.6 Employment in agriculture: working hours and combined other employment of farmers

3.5.2 *Land use*
3.5.2.2. Main crops, by Member State and Candidate Countries

3.5.3 *Livestock numbers*
3.5.3.3 Cattle numbers and number of holders
3.5.3.4 Changing structure of cattle farms, by Member State and Candidate Countries
3.5.3.5 Changing structure of cattle farms, by herd size class
3.5.3.6 Dairy cow numbers and number of holders
3.5.3.7 Changing structure of dairy farms, by Member State and Candidate Countries

3.5.3.8 Changing structure of dairy farms, by herd size class
3.5.3.9 Pig numbers and number of holders
3.5.3.10 Changing structure of pig farms, by Member State and Candidate Countries
3.5.3.11 Changing structure of pig farms, by herd size class

3.5.4 *Farm structures*
3.5.4.1 Number and area of holdings

3.6 **Implementation of the common agricultural policy (CAP)**

3.6.1 *Impact of CAP reform*
3.6.1.1 Overview of the implementation of direct payments under the CAP in Member States
3.6.1.2 36121 Budgetary ceilings for Single Payment Schemes in Member States
36122 Budgetary ceilings for direct payments to be granted under Article 70 of regulation (EC) No 1782/2003.
3.6.1.3 Single Area Payment Scheme - areas.
3.6.1.4 36141 Annual financial envelopes for the single area payment scheme
36142 Maximal amount of funds available for the Member States for granting the separate sugar payment referred to in article 143ba of regulation (EC) No 1782/2003.
3.6.1.5 Budgetary ceilings for direct payments to be granted under Articles 66 to 69 of Regulation (EC) N°. 1782/2003
3.6.1.7 Aid for energy crops.
3.6.1.8 Aid for energy crops - Evaluation - Regulation (EC) N° 1973/2004 - Article 3(1)(b)a
3.6.1.9 Use of land set aside for the production of raw materials Regulation (EC) N° 1973/2004 - Article 169 (a) and (b).

3.6.1.10 Suckler cow premium: national ceilings and premiums granted
3.6.1.11 Special premium for male bovine animals: regional ceilings and number of premiums granted
3.6.1.12 Slaughter premium: national ceilings and premiums granted
3.6.1.13 Ewe and goat premium: potential rights and applications for premiums
3.6.1.14 Direct payments to the producers by size class paid by EAGF (Regulations (EC) n° 1782/2003)

3.6.2 *Rural development policy results*

3.6.2.1 Measure: Early retirement - Regulation (EC) No 1698/2005 art. 23.
3.6.2.2. Measure: Less Favoured Areas (holdings receiving compensatory allowances by pre-dominant LFA type) - Regulation (EC) N° 1698/2005 art.37

3.6.2.3 Measure: Agri-environment - Regulation (EC) No 1698/2005 art. 39.
3.6.2.4 Measure: Afforestation of agricultural land - Regulation (EC) No 1698/2005 art. 43
3.6.2.5 Measure: Afforestation of non-agricultural land - Regulation (EC) No 1698/2005 art.43

3.7 **Trade**

3.7.1 World exports and EU external trade in all products, agricultural products and other products
3.7.2 EU trade by product (CN chapters)
3.7.3 Exports of agricultural products by the EU and some other countries
3.7.4 Imports of agricultural products by the EU and some other countries
3.7.5 World production and trade in the principal agricultural products – The EU share of the world market
3.7.6 EU trade in agricultural products, according to principal customer countries
3.7.7 EU trade in agricultural products, according to principal supplier countries
3.7.8 EU imports and exports (by product and aggregate)
3.7.10 EU imports of agricultural products from various groups of countries
3.7.11 Agricultural product exports from the EU to various groups of countries
3.7.12 EU trade with ACP countries
3.7.13 EU trade with Mediterranean countries
3.7.14 EU trade in agricultural products
3.7.15 Intra-EU trade (by product and aggregate) on the basis of arrivals and dispatches
3.7.19 EU trade with Candidate Countries
3.7.21 EU trade with the United States of America
3.7.23 EU trade with the MERCOSUR countries
3.7.24 EU trade with the NAFTA countries

3.8 **Consumption and self-sufficiency**
3.8.2 Human consumption of certain agricultural products
3.8.3 Self-sufficiency in certain agricultural products

4 **AGRICULTURAL MARKETS**

4.1 **Cereals**
4.1.1.1 Area, yield and production of common and durum wheat
4.1.1.2 Area, yield and production of rye and barley
4.1.1.3 Area, yield and production of oats and mixed cereals and maize
4.1.1.4 Area, yield and production of other cereals and total cereals (excluding rice)
4.1.2.1 World production of cereals and production in main exporting countries
4.1.3.1 The EU's share in world cereals trade
4.1.4.1 Supply balances– durum wheat– common wheat
4.1.4.2 Supply balances– barley– rye
4.1.4.3 Supply balances – maize– oats
4.1.4.4 Supply balances – other cereals– total cereals (excluding rice)
4.1.5.1 Producer prices of certain cereals
4.1.5.5 Cif Rotterdam prices for cereals
4.1.6.2 Market prices for cereals as a percentage of the intervention price
4.1.6.3 Intervention stocks in the EU at the end of the marketing year

4.2 **Rice**
4.2.1.1 Area, yield and production of rice (paddy)
4.2.4.1 Supply balance – rice
4.2.5.1 Cif Rotterdam prices for long-grain rice
4.2.6.1 Market prices for Community paddy rice compared with intervention prices

4.3 **Sugar**
4.3.1.1 Area under sugarbeet, yield and production of sugar
4.3.2.1 World production of sugar and production of the main producing and/or exporting countries
4.3.3.1 World supply balance and international trade in sugar
4.3.4.1 Sugar supply balance
4.3.5.1 Average world sugar prices
4.3.6.1 Sugar and isoglucose production, by quota

4.4 **Oilseeds, oils and fats**
4.4.1.1 Area, yield and production of: rapeseed; sunflower seed; and soya beans in the EU
4.4.3.1 Internal and external trade of: rapeseed; sunflower seed; soya beans; and flax seed
4.4.4.1 Supplies of rape and colza (seed, oil, cake)
4.4.4.2 Supplies of sunflower (seed, oil, cake)
4.4.4.3 Supplies of soya (seed, oil, cake)
4.4.4.4 Supplies of olive oil
4.4.5.1 Fixed prices and average market prices in Greece, Spain and Italy for olive oil
4.4.5.3 Average monthly prices for oilseed products

4.5 **Fruit and vegetables**
4.5.1.1 Area, yield and harvested production in the EU and Candidate Countries of: (a) fruit; (b) citrus fruit; (c) vegetables
4.5.3.1 Intra-EU trade and external trade in fresh fruit and vegetables
4.5.5.1 Producer prices of certain types of fruit and vegetables
4.5.6.1 Quantities of fruit and vegetables bought in

4.6 **Wine**
4.6.1.1 Area under vines, yield and production of wine and must
4.6.3.1 Trade in wine and share in world trade
4.6.4.1 Supply balance – wine

4.7 **Potatoes**
4.7.1.1 Area, yield and production of potatoes
4.7.1.2 Area, yield and production of early potatoes

4.8 **Tobacco**
4.8.1.1 Area, yield and production of leaf tobacco, by groups of varieties

4.8.3.1 EU share of world trade in raw tobacco
4.8.3.2 EU tobacco exports to third countries
4.8.3.3 Total imports and exports of unmanufactured tobacco and tobacco refuse

4.9 **Seeds**
4.9.1.1 Seed production
4.9.1.2 Seed areas accepted for certification

4.10 **Hops**
4.10.1.1 Number of holdings, area, yield and production of hops in the EU
4.10.4.1 Market balance – hops

4.11 **Fibre flax, cotton and silkworms**
4.11.1.2 Area, yield and production of fibre flax and hemp
4.11.1.3 Output of silkworm cocoons and number of boxes of silkworm eggs used
4.11.3.2 Intra-EU trade and external trade in cotton fibre
4.11.5.3 Ginned cotton, world prices

4.13 **Feedingstuffs – Fodder**
4.13.7.3 Industrial production of compound feedingstuffs, by species and by Member State and Candidate Countries

4.13.7.8 EU supplies of dehydrated and dried fodder
4.13.7.9 Area, yield and production of dry pulses, feed peas and field beans in the EU and Candidate Countries
4.13.7.12 Cif offer price (Rotterdam) for Brazilian soya cake

4.14 **Meat in general**
4.14.1.1 Gross internal production and consumption of meat
4.14.3.1 Net balance of external trade in meat and self-sufficiency

4.15 **Beef/veal**
4.15.0.1 Cattle numbers (December of previous year)
4.15.1.1 Slaughterings of adult bovine animals and calves
4.15.1.2 Net production of beef/veal in the EU (adult bovine animals and calves)
4.15.2.1 World production and production of principal beef/veal producing/exporting countries
4.15.3.1 Beef/veal – EU trade by species
4.15.3.2 Beef/veal – trade with non-member countries
4.15.4.1 Supply balance – beef/veal
4.15.5.1 Market prices for beef/veal

4.16 **Pigmeat**
4.16.0.1 Pig numbers (December of previous year)
4.16.1.1 Number of pigs slaughtered
4.16.1.2 Net pigmeat production
4.16.2.1 World production and gross domestic production of main pigmeat-producing or exporting countries
4.16.4.1 Supply balance – pigmeat
4.16.5.1 Market prices for pigmeat

4.17 **Sheepmeat and goatmeat**
4.17.0.1 Sheep and goat numbers (preceding December)
4.17.1.1 Sheep and goats slaughtered

4.17.3.1 Sheepmeat and goatmeat – EU trade, by species
4.17.3.2 Sheepmeat and goatmeat – trade with non-member countries
4.17.3.3 Imports of sheepmeat and goatmeat
4.17.4.1 Supply balance – sheepmeat and goatmeat
4.17.5.1 Market prices for sheepmeat

4.18 **Poultrymeat**
4.18.0.1 Number of utility chicks of table strains hatched
4.18.1.1 Gross internal production of poultrymeat

4.18.3.1 Trade in poultrymeat with non-member countries
4.18.4.1 Supply balance – poultrymeat
4.18.5.1 Market prices for chickens

4.19 **Eggs**
4.19.0.1 Laying hens, numbers
4.19.0.2 Number of utility chicks hatched from laying hens
4.19.1.1 Usable production of eggs (total eggs)
4.19.3.1 Trade in eggs with non-member countries
4.19.4.1 Supply balance – eggs (total eggs)
4.19.5.1 Market prices for eggs

4.20 **Milk and milk products**
4.20.0.1 Dairy herds and yield
4.20.1.1 Production of cows' milk and delivery to dairies
4.20.1.2 Deliveries of cows' milk to dairies, as a proportion of cows' milk production
4.20.1.3 Production of fresh milk and fresh milk products by the dairy industry
4.20.1.4 Production in dairies of butter and cheese
4.20.1.5 Production in dairies of milk powder
4.20.1.6 Production in dairies of concentrated milk and casein
4.20.2.1 World exports and production of– butter– cheese– casein
4.20.2.2 World exports and production of– whole-milk powder and skimmed-milk powder – Condensed milk
4.20.3.1 World trade in certain milk products – EU share
4.20.4.2 Detailed supply balance – skimmed-milk powder
4.20.4.3 Detailed supply balance – butter
4.20.5.1 Milk producer price
4.20.6.1 Intervention measures for butter and skimmed-milk powder
4.20.6.2 Application of the quota system (quotas for deliveries)
4.20.6.3 Community butter and skimmed-milk powder stocks
4.20.6.4 Quantities of skimmed milk powder intended for animal feed and of skimmed milk processed into casein and caseinates, for which aids have been granted

4.21 **Honey**
4.21.4.1 Supply balance – honey

4.22 **Wood**
4.22.1.1 Basic forest resources
4.22.3.1 EU external trade in forest products
4.22.3.2 EU external and intra-EU trade in timber and timber products by Member State

4.23 **Genetically modified organisms (GMOs)**

4.23.1.1 World areas sown to GMOs by country
4.23.1.2 World areas by crop (GMOs)

4.24 **Quality policy**

4.24.9.1 Protected designations of origin and protected geographical indications (Regulation (EC) no 510/2006): record of names registered
4.24.9.2 Certified and policy – supported organic and in conversion land area
4.24.9.3 Number of certified and policy – supported organic and in conversion farms

¤ = New table

Remark: The following tables of *The Agricultural Situation in the European Union – 2008* have not been repeated: 3.3.11, 3.3.12

The 2009 Agricultural Year

General overview

1. The **2009 agricultural year** in the EU was characterised by a remarkable drop in agricultural income, which was mainly triggered by a fall in agricultural output prices combined with a slight decrease in the overall agricultural output volume. The volume of EU crop production decreased by 0.9% in 2009 as compared to 2008, and the output volume of the animal sector fell by 1%. Real agricultural producer prices decreased by 9.9% in 2009 as compared to 2008, reflecting 11.9% lower crop output prices and 8.2% lower animal product output prices. Within the crop sector, the prices for cereals (-25.2%) and industrial crops (-13.7%) showed the strongest downturn, while lower milk prices (-20.3%) particularly contributed to the decrease in animal product output prices. Agricultural input prices (in nominal terms) showed a moderate decrease of 5.2% (as compared to the remarkable increases seen over the previous years), mainly due to lower prices for feedstuffs (-13.8%) and energy/lubricants (-10.7%). Fertiliser prices increased even further (by 5.4%, after the substantial increase of 67.1% in 2008 as compared to 2007). Reflecting the previously discussed output and input price developments, the income estimates sent by Member States depict a remarkable decrease in agricultural income by 11.6% in real terms and per annual labour unit as compared to 2008 in the European Union as a whole. The actual range by country varies from -32.2 for Hungary to +7.8 % for Malta. In 2009, EU agricultural exports in value terms amounted to 73.8 billion Euro, they were made up for 64% by processed final products. The overall value of EU agricultural exports decreased by 8 %, with the strongest value drop recorded for exported raw commodities (-18%). The decrease in export value was particularly marked for wheat (grains) (-20% or 850 million Euro), wine & vermouth (-13% or 850 million Euro) and other cereals (-65% or 780 million Euro). Export values also fell for pork (-18%) and the product aggregate dairy products, milk and cream (-29%). Exports to Russia fell from 8.8 billion Euros in 2008 to 6.9 billion Euro in 2009, a drop of 21%. To the USA, a drop of 8% in EU agricultural exports was observed. Exports to China though increased by 20% and reached 2.1 billion Euros in 2009. The overall value of agricultural imports in 2009 as compared to 2008 dropped even more significantly as it went down by 12.9% reaching 76.9 billion Euros in 2009. EU imports in 2009 fell remarkably from Brazil (from 13.5 to 11.7 billion Euro or minus 13%), the US, with a drop of 24% (from 7.8 to 5.9 billion Euro) and Argentina (-28% from 8.1 billion Euro in 2008 to 5.8 billion Euro in 2009). As a consequence, the EU agricultural trade balance improved from a deficit of 8 billion Euros for 2008 to a deficit of 3 billion Euros for the year 2009.

2. The general **economic situation in the EU** appears to be beclouded. 2009 was a year of recession in Europe, the GDP drop in the EU is estimated at 4.1% in 2009 as compared to 2008. Only a slight (and uncertain) recovery is forecast for the years 2010 (+0.7%) and 2011 (+1.6%), while world output would bounce back stronger (+3.9% in 2010 and +4.3% in 2011). While the agricultural sector generally seems to be more resilient to economic crises than other sectors, it has faced great challenges, especially in demand growth and farm income, which may continue to exert strong pressure on agricultural prices and trigger significant structural adjustment. Whereas food demand was more directly negatively affected in the higher value-added sectors (especially in the livestock and dairy sectors), the economic crisis was also felt indirectly in other parts of the agricultural economy: in the arable crop sector through feed demand, in the energy crop sector in the wake of changed input/output price

relations, as well as in the upstream and downstream industries. Inflation pressures on consumer prices would continue to be prevalent, reflecting remarkably higher energy, capital and other food production and distribution costs. Overall consumer price inflation in 2009 is estimated at 1%, food price inflation at 0.9%. Within this general economic framework, EU and world trade growth are also estimated to have gradually decelerated. The US-Dollar continued its longer-term trend of depreciation vis-à-vis the Euro until the end of the first half of 2008. Then, it appreciated strongly (on the perceived height of the financial crisis), but continued to devalue in the second half of 2009.

Overview on agricultural markets

3. The area cultivated under **cereals** in 2009/2010 stood at 58.9 million ha. It decreased by 1.4 million ha or by 2.2% compared with the relatively high 2008/2009 level. While the cereal area decreased by 1.7 million ha in the EU-15, it increased by 0.3 million ha to 23.1 million ha in the 12 New Member States of the EU. Climatic conditions have been generally favourable and have led to average yields for all arable crops.

   Average yields of 5.0 t/ha (1.6% above the five-year average of 4.9 t/ha) led to a total cereal harvest estimated at 293.9 million t, which is 6.3% below the record high level of 2008/2009 (313.8 million t), but 1.7% above the five-year average (289.0 million t). The average yield reached 3.5 t/ha in the EU-12 (close to the five-year average) and 5.9 t/ha in the EU-15 (2.7% above the five-year average). Soft wheat, durum wheat, barley, oats and maize production decreased.

4. EU-27 **oilseed** area is estimated at 10.7 million ha in 2009/10. Total oilseed production would stand at 28.9 million t. This would represent an increase of 7% in comparison with 2008/2009 when oilseed production reached 27 million t. Average oilseed yields would reach 2.70 t/ha, slightly above the level of 2004/2005 of 2.68 t/ha.

5. **Protein crop and linseed** production would stand at 2.5 million t and 0.12 million t respectively.

6. **Rice** production was around 1.49 million t (milled equivalent), which means a 10.8% decrease compared to the previous marketing year. This decrease is the combined effect of the decrease of the sown area (from 423 000 to 414 000 ha) and the decrease of the yields (from 6.6 to 6.1 t/ha on average).

   Rice consumption decreased by 8.4% (from some 2.58 to 2.36 million t in milled equivalent) compared to the previous year.

   Rice stocks decreased by 18.6% and reached a level of 403 000 t till the end of the marketing year. The marketing year started and ended without public intervention stocks.

   The decreasing consumption and stocks compensated for the production decrease, resulting in a decrease in the rice trade deficit. The milled equivalent rice imports decreased from 1.11 to 0.84 million t with a parallel export decrease from 127 000 to 104 000 t.

   Paddy rice prices were well above the reference price level during the whole marketing year, developing in the range of 217-353% of the reference price at the

start of the marketing year and decreasing to 160-257% of the reference price by the end of the marketing year. A similar tendency could have been detected also for milled rice: after the significant price increase in the 2007/2008 marketing year, the EU market prices mainly decreased (by up to 52%) during the 2008/2009 marketing year.

7. 2009 appears to have been a memorable year for the **sugar** markets. World market prices have more than doubled during the year due to a major deficit situation expected in 2009/10, the second in a row.

According to the International Sugar Organization (ISO), global sugar production fell sharply by 12 million tonnes in 2008/09 to 152.5 million tonnes, of which 120 million tonnes was cane sugar (i.e. 79% of the total). Sugar consumption reached 164.1 million tonnes, thus 2008/09 resulted in a major global sugar deficit of 11.7 million tonnes.

With respect to the 2009/10 crop year the situation is expected to improve only moderately and sugar production would increase by 4.7 million tonnes to 157.1 million tonnes. Due to the economic crisis and high sugar prices, consumption would only grow by about 1.5% compared to the 10-year average of 2.6%. Demand is estimated to reach 166.6 million tonnes. Thus, 2009/10 would bring another deficit of about 9.4 million tonnes.

The final figures for EU sugar production indicate that in 2008/09 13.9 million tonnes of quota sugar and quota isoglucose were produced, plus an additional 2.9 million tonnes of out-of-quota sugar (of which 0.4 million tonnes would be carried forward to the 2009/2010 marketing year).

According to first forecasts for 2009/2010, production under quota would again reach 13.9 million tonnes. However, excellent weather conditions and increased sugar beet area would possibly lead to an out-of-quota sugar production above 4.5 million tonnes.

2009 was the last year of application of the temporary restructuring scheme. During the four years of its application (2006 - 2009), 5.77 million tonnes have been renounced of which 5.23 million tonnes sugar, 0.22 million tonnes isoglucose as well as the full inulin syrup quota of 0.32 million tonnes.

The total production quotas for 2009/2010 are 14.027 million tonnes of which 13.337 million tonnes for sugar and 0.69 million tonnes for isoglucose.

On the basis of the Community balance sheet the overall sugar and isoglucose consumption would be estimated at 16.5 million tonnes.

The 2008/2009 marketing year was the first year when exports of out-of-quota sugar were authorized. Commission Regulation (EC) No 924/2008 fixed the quantitative limit in accordance with Article 61 of Council Regulation (EC) No 1234/2007 at 0.95 million tonnes of sugar and 0.05 million tonnes of isoglucose.

For the 2009/2010 marketing year, the quantitative limit was fixed by Commission Regulation (EC) No 274/2009 at 1.35 million tonnes of sugar and 0.05 million tonnes of isoglucose.

During 2008/2009, overall sugar exports reached 0.983 million tonnes. A further 0.928 million tonnes of sugar was exported in processed products.

Imports of sugar (including both white and raw sugar) amounted to 3.885 million tonnes in white sugar equivalent, whereas 0.547 million tonnes of sugar was imported in the form of processed products.

During 2008/2009 a total of 283 743 t of intervention sugar was sold, in particular on the Community market and under the most deprived people scheme. The remaining 34 944 tonnes of sugar intervention stocks on 30 September 2009 were allocated to the 2010 most deprived people scheme.

The final reduction of the institutional price took place on 1 October 2009 when the white sugar reference price was cut from 541 per tonne to 404 EUR per tonne.

The sugar market price gradually decreased towards the 2008/2009 reference price and reached about 555 EUR per tonne by the end of the 2008/2009 marketing year. The latest information for November 2009 shows a further decrease to 493 EUR per tonne.

8. Total **must** production for wine and grape juice in 2008/2009 remained at the very low level of production reached one year before. Estimates indicate a production of about 173 million hectolitres, of which 165 millions for vinification.

The market price of **table wines** without geographical indication at producer level suffered from high stock levels: Spanish red table wines were marketed at 2.6 € per hectograde (-10% compared to the same period of the last year), Italian red table wine at 2.7 € (-25%), whereas French red table wine increased at the end of the year up to 3.55 € (+10%) after a sharp collapse during the summertime (2.85 €). Quotations for white table wines are often based on insufficient volumes to be considered truly representative.

Exports as well as imports of wine decreased in volume by 2-3%. However exports in value increased by 14% to 6.187 billion Euros. In combination with the decrease of imports in value (-8%), the trade balance shows a positive result reaching 3.731 billion euros, an increase of 16% compared to 2007.

9. Overall, 2009 was a difficult year for EU **fruit and vegetables** producers, characterised by low prices and minimum investments. The usual price volatility in the sector was combined with the negative effect of the global economic crisis. Further, there were some difficulties with exports to Russia which is a main outlet for European fruit and vegetables. The results vary by product and by country.

EU production of peaches and nectarines in 2009 is estimated at about 4 million tons, a slight increase (+3%) compared to 2008. Producer prices were significantly lower on a year-on-year basis, due to the combination of relatively large supply, the global economic turndown and pressure from retailers to decrease prices. Particularly difficult was the market situation for canning peaches where prices often failed to cover the production costs. Some producers of peaches for processing in Greece and Spain are considering turning to fresh produce for better prices.

The EU apple crop in 2009 is estimated at 10.9 million tons, 5% less compared to the previous year, but still 6% over the average for the last three years. Production in Eastern Europe decreased considerably (due to a 19% drop in Poland's crop) while

that in Western Europe remained close to the 2008 level. The EU apple season started with very low prices, negatively affected by the remaining stocks from the 2008 crop, the presence of fruit from overseas, the heavy competition from summer fruit and the difficulties faced with exports to Russia. Particularly low were the prices of apples for processing, in many cases below production costs.

According to preliminary data, EU production of pears has bounced back to 2.5 million tons in 2009, 16% up compared to 2008 and 2% over the average for the last three years. The pear season started better than the apple one, favoured by the absence of carry-over stocks.

EU production of citrus fruit is forecasted to remain stable in 2009/10 at about 10.2 million tons with significant growth expected for Italy and Greece, while the production in Spain would fall. A decrease of production (-22%) is forecasted for lemons and grapefruits (-11%) whereas the production of the main citrus fruit, oranges, is expected to grow by 6%.

The tomato 2009 summer campaign was one of the most difficult ones in recent years. The producer prices were at very low levels, due to the global financial crisis, lower consumption, depreciation of the British Pound. At the same time also a higher production year-on-year in some of the Member States had its influence. The winter tomato campaign also started with low prices. An additional factor here is the competition from tomatoes imported from Morocco.

Initial estimates suggest higher production of potatoes in 2009 (most importantly in Belgium and France, but also in other major producing Member States) with significantly lower prices (up to 20-25% below the last year levels).

According to preliminary data, in 2009 EU imports of fresh or dried fruit and nuts decreased by 8% to about 12 million tons. As usual, bananas (-7%) and other tropical fruit (-5%) account for about half of the imported volumes. Imports of nuts remained stable.

Other products imported mainly to complement the EU seasonal production are citrus fruit (-13%), apples (-14%), table grapes (-6%), pears (+4%) and kiwis (-10%).

At the same time, EU exports of fresh or dried fruit and nuts increased to 2.9 million tons, 13% above the 2008 level. Exports of fresh apples increased to nearly 1.2 million tons (+36%), mainly due to the increase in Polish exports to Russia and Ukraine. A considerable increase is also observed in the export of citrus fruit (+5%), nectarines (+13%), kiwis (+26%) and melons (+9%), while exports of pears and table grapes dropped (by 8% and 20%, respectively).

In 2009, the EU imported about 2.3 million tons of fresh vegetables, 3% less compared to 2008. Main imported products are tomatoes (+11%), potatoes (-14%, mainly new potatoes), onions (-28%), sweet peppers (+1%), beans (-6%), carrots and turnips (+85%) and garlic (-9%). EU exports of fresh vegetables decreased to about 2.6 million tons, 4% below the 2008 level.

Leading export product are potatoes (+1%, seed and old potatoes), followed by onions (+14%), tomatoes (-25%), brassicas (-35%) and sweet peppers (+11%).

10. According to data submitted by producing countries, **olive oil** production in 2009 (marketing year 1 July 2008 to 30 June 2009) is estimated to have reached

1,814 million tonnes (1 029 300 tonnes in Spain, 434 000 tonnes in Italy, 304 900 tonnes in Greece, 36 000 tonnes in Portugal, 7 000 tonnes in France, 2 900 tonnes in Cyprus and 500 tonnes in Slovenia). This quantity represents a 9.5% decrease to 2007/08. During the same period, olive oil prices decreased on average by 17.7% compared to the previous campaign. Regarding trade flows (including inward processing) and in comparison to 2007/08, imports decreased by 39% and reached 104 000 tonnes while exports totalled 467 300 tonnes which represents a decline by 6%.

11. As far as the EU **meat** sector is concerned, the long-term trend of decreasing cattle herds in the EU continued in 2009. In May/June 2009 as compared to May/June 2008, the number of cows decreased particularly in Spain, Poland, Italy and France. Cow de-stocking was particularly triggered by the relatively unfavourable profitability conditions in the dairy sector. Also, a decrease in the number of slaughter calves (mainly driven by de-stocking activities in France, Italy, Spain, Poland and Denmark) could be observed. The latter tendency was affected by the impact of the Blue Tongue Disease on intra-EU live animal trade and higher cattle feeding/finishing costs in 2008.

Reflecting the above discussed cattle herd developments, EU-27 beef and veal production in 2009 is expected to have decreased by around 2%. Beef and veal imports grew in 2009 by +9%, following a strong increase of deliveries from Uruguay and Argentina particularly, and from Australia and New Zealand. Moreover, imports from Brazil haven't yet fully recovered from past disruptions triggered by EU traceability regulation.

Contradicting last years' trend of increasing EU beef and veal exports, the latter decreased by a substantial 15% in 2009, mainly driven by a fall of exports of frozen beef to Russia. Not only did the overall export volume decrease, also the overall export value decreased by 6%. The remarkable fall of 30% in the overall up-take of licence applications for refunded exports during the period July-December 2009 should also be noted.

Given the decrease in domestic production, and despite the remarkable rise in imports and the reduction in exports, EU beef prices stayed at relatively high levels but lower than in 2008 throughout most of the year 2009.

Producer prices decreased from early-Spring (March) and kept stable during the summer months around the range of 310-311 Euros per 100 kg. Finally, during the last part of the year the price increased again to reach a value of 320 Euros per 100 kg carcass weight (around 143% of the applicable reference price). Also, steer, heifer and, cow prices have followed similar patterns over 2009. These price trends occurred regardless of an apparently weakening domestic beef and veal demand as a result of the economic recession and lower expenditure on most valuable beef cuts.

As far as the EU pig sector is concerned, structural adjustments at accelerated pace continued in 2009. At the end of the year 2008, the overall EU-27 pig herd was 4.2% smaller than one year before and sow numbers fell even by 6.4%. The data from major producing countries implies that this trend would remain valid in 2009.

Given these herd developments and considering the accelerated shift of piglet and pig production into bigger, more productive farms, EU pig meat production in 2009 is estimated to have fallen by 2.5% as compared to 2008.

While feed costs remained relatively low and stable during 2009, the prices for pig carcasses were under pressure, which was especially visible in comparison with the relatively high prices of 2008. The 2009 EU average carcass price at 141 Euros/100 kg was 12 Euros/100 kg lower than the year before.

The duration of the observed decrease in EU pig meat prices seems to be influenced by the impact of the ongoing "economic and financial crisis" on domestic and international pig meat demand, on the financing of economic activities (including intra- and extra-EU-trade) and on exchange rate developments. Particularly the latter increasingly appear to be a major driving force for downward price pressure on the domestic pig meat market, whose balance is relatively dependent on smooth EU intra- and extra-trade flows. The devaluation of the Russian Rouble and an increasingly restrictive Russian meat import policy, the enhanced competition from North America on the Japanese pig meat market and, particularly, the devaluation of the currencies of major pig meat net importing New Member States are seen to contribute to the fact that domestic pig meat prices had (and still have) difficulties to recover.

EU pig meat exports to third countries (which were supported by refunds for fresh and frozen pig carcasses and cuts) increased by a substantial 34% in 2008. However, exports started to weaken at the end of 2008, and in 2009, EU pig meat exports remained 12% down on 2008, but 25% higher than in 2007. In 2009 as compared to 2008, the exports of fresh and frozen pig meat to third countries dropped by 19%.

The contraction of EU pig meat exports concerned in particular shipments to Japan (-50 500 tonnes or -21%), Hong-Kong (-49 000 tonnes or -11%) and South Korea (-20 500 tonnes or -18%). On these markets, the EU lost exports of fresh and frozen pig meat. Exports to China increased (31 000 tonnes or +21%), but this positive development mainly concerned fats and offal, which are lower valued pig products. Expressed in value terms, total EU pork exports to third countries decreased by nearly 510 million Euros (-12%).

On a year-on-year basis, total pork and live pig exports to Russia decreased only slightly (-1%) to 761 000 tonnes, as a 74% increase in live pig exports was recorded (with effect from 1 January 2010, the import duty on live pigs to Russia increased from 5% to 40%). Fresh and frozen pig meat exports to Russia were down 40 000 tonnes or 15% in 2009. .

Pig meat imports into the EU remained at 52 000 tonnes in 2009, 14% down on 2008. EU imports of fresh and frozen pig meat decreased by 32%. Switzerland and Chile combined accounted for 65% of EU imports.

Following the reduction in production and the slow-down in domestic demand on both a volume and a value basis, EU pig meat consumption in 2009 would have further decreased by 1.2%, with additional pressure for pig meat market prices resulting from the general consumer preference shifting towards lower-price marketing channels and lower product prices at the point of sale.

In 2009 as compared to 2008, EU poultry meat production decreased slightly (-0.3%).

Poultry meat imports are expected to have decreased by 3.2% in 2009 (however, coming from a relatively high import level in 2008), with processed poultry meat and poultry meat preparations successively gaining import market shares at the expense of poultry carcasses; a development, which is also reflected in the increasing unit values

of EU poultry meat imports from third countries). While the quantities the EU imported poultry meat from Brazil and Thailand fell (-5% for both of them), imports from Chile increased in 2009 as compared to 2008.

EU poultry meat exports to third countries are estimated to have increased by 3.3% in 2009 as compared to 2008, with higher export volumes having been delivered to Hong Kong (+51%) and Malaysia (+27%)

Refunded poultry meat exports (mainly to the Middle East) remained stable.

In line with a stable availability due to only minor changes in domestic production and in the overall trade balance, EU poultry meat consumption in 2009 is estimated to have decreased only slightly.

EU sheep meat production is estimated to have continued to decrease by a significant 3.6% in 2009, mainly resulting from partial decoupling of direct payments, structural change accompanied by production abandonment, a lower output recorded in Spain and France, probably stemming from higher mortality and lower productivity rates following the outbreaks of the Blue Tongue Disease but also due to reduced production in the UK and Ireland.

Sheep meat prices developed at comparably high levels throughout the year 2009, reflecting a situation of limited supplies. The EU average price of light lamb in 2009 was 639 Euros/100 kg carcass weight (+5.3% as compared to 2008). The average price of heavy lamb amounted to 448.5 Euros/100 kg carcass weight (+4.9% as compared to 2008).

Regarding trade, sheep meat imports in 2009 remained at comparable levels as in the year before at 239 000 tonnes, with New Zealand, Australia and Uruguay all using 98% of their import quotas.

In 2009 as compared to 2008, EU sheep meat consumption is estimated to have fallen by 3.3%, following both tight supplies, relatively high prices and a weakening domestic demand.

12. When compared to 2008, EU **milk** deliveries followed a mixed pattern over 2009, with an initial decline of 1.6% in the first quarter (Q1), followed by an increase of 1.8% in Q2 and a return to a declining trend in Q3 at -0.5%. It is estimated that deliveries have remained below the 2008 level in Q4, despite the recovery of dairy commodity markets and the subsequent increase in the farm gate milk price. On the whole, EU deliveries to dairies are estimated to have declined by 0.4% to the level of 133.4 million t in 2009. Compared to the marginal decline in the EU-15 (-0.1%), milk deliveries in the EU-12 have decreased by 2.7%, driven by a 10% fall in the EU-2. EU milk production is assumed to have declined to 147.9 million t (-0.7%).

The May 2009 census indicated a considerable reduction in the size of the EU dairy herd that is estimated to stand at 23.7 million heads at the end of 2009, corresponding to a reduction of 2.1%. On the other hand, the average yield per dairy cow is estimated to have increased to 6.155 kg (+1.5%).

The rate of quota utilisation has declined further with the 2008/09 quota year concluding with a net undershoot for EU deliveries quota of 5.7 million t (or -4%) with both EU-15 and EU-12 falling below their respective quota levels to -3.2% and -8.6% respectively (driven by the huge decrease in the EU-2). Even so, five Member

States (AT, IT, LU, NL and CY) have delivered milk in excess of their respective quotas at an aggregate level of around 550 thousand tonnes that are subject to surplus levy payments.

The EU weighted average farm gate milk price displayed a heavy reduction of 21% between January and May 2009 in line with the earlier reduction in dairy commodity prices. The EU farm gate milk price remained below 25€/100 kg between April and July. It displayed a steady growth between June-November 2009, exceeding the rate of the 'usual' seasonal trend, driven by the increase in dairy commodity prices. The November weighted EU average price of 28.1€/100kg corresponds to an increase of almost 16% from the 2009 low in May, but remains 14% below the price paid in November 2008 and 28% below the peak price of November 2007. First estimates for the December 2009 EU price depict a levelling off at the November level. Despite this increase, the estimated average EU milk price for 2009 (at 26.2€/100kg) remains well below the 2008 and even the 2007 levels (by 24% and 17% respectively). On the other hand, the estimated 2009 annual average of input costs remained slightly higher (9%) than the 2007 level. Moreover the estimated 2009 input costs were significantly higher than the 2004-2006 average: by 22% in the EU-15 and 32% in the EU-10.

The farm-gate milk price has been observed to follow the commodity price trends with a lag of around three months, which implies that changes in the EU weighted average milk price could remain stable (i.e. less volatile) during the beginning months of 2010, but subject to 'usual' developments linked to the seasonal pattern of production.

Cheese production stagnated in 2009 as a direct consequence of the financial crisis and the economic recession through their impact on demand. EU production is estimated at 8.68 million t for 2009, corresponding to a slight decrease of 0.4% with a more pronounced decline in the EU-12 (-2%). While EU exports have recovered over the second semester and are expected to reach 570 thousand t, even exceeding the 2008 level by 2.7%, domestic consumption remained slightly below the 2008 level (-0.7%).

The 2009 prospects for milk deliveries and fat use in other dairy products indicate a 2% decline in EU butter production for 2009 to 2.1 million t with output falling drastically in the autumn months, providing justification for the steep increase in the butter price over the September-December period. While the re-activation of export refunds has supported EU exports, export volumes remained below the 2008 level by an estimated 5% (at 146 thousand t). Domestic consumption showed a marginal increase of 0.3%.

While intervention stocks quickly reached levels well beyond the 30 thousand t limit at guaranteed prices and significant quantities were bought in through the tendering procedure from March to May 2009, the supply pressure on the butter market has gradually eased with the sharp reduction in butter output from August onwards. Intervention stocks stood at 77 thousand t by the end of 2009 while private stocks were gradually reduced to 38 thousand t.

The prospects for milk deliveries and protein use in other dairy products should result in an increase in EU SMP production for 2009 to 951 thousand t (+10.1%), which is less pronounced than foreseen in the October Report. EU exports picked up considerably in the final months of 2009 resulting in annual exports exceeding the

2008 level by 20% (at 215 thousand t). Despite the low prices over most of the year EU demand is estimated to have remained limited at around 637 thousand t.

EU intervention stocks of SMP quickly reached levels above the limit at the guaranteed buying-in price and continued growing in the second quarter and throughout the summer months. Intervention stocks stood at 258 thousand t at the end of 2009 of which around 150 thousand t attributable to the de-stocking of commercial stocks carried over from 2008.

As WMP production is highly dependent on export opportunities, and with Oceania managing an increased export share in world exports compared to 2008, EU production declined in 2009, intensified by the assumed de-stocking of private industry stocks carried over from 2008. WMP output in 2009 is estimated at 790 thousand t (-10%) with domestic use1 (including stocks) falling to 333 thousand t (-16%). Despite the availability of export refunds and higher world demand, extra-EU exports dropped by 5% to 457 thousand t (section 3.8 provides additional information on the 2009 world market development).

In terms of utilisation of whole milk, the production of fresh dairy products accounts for a significant share of around 28% of total EU-27 dairy products with drinking milk and cream for direct consumption being the most important individual products. In terms of product weight, drinking milk and acidified milk are the most relevant products on the dairy market.

Production in 2009 showed a further decline (-0.4%) driven by lower drinking milk production (-0.8%) and cream output (-0.7%). On the other hand yoghurts and other fresh2 products displayed an increase of 0.6% each. Following the 0.4% decline in 2008 explained by the high price environment, per capita consumption of fresh dairy products as a whole declined by an additional 0.6% as a consequence of the economic crisis.

In 2009 the production of concentrated milk appears to have remained stable, but casein and whey powder have displayed significantly lower production levels, falling by 23% and 5% respectively.

Agricultural income

13. The estimates of farm income developments in 2009 provided by Eurostat on the basis of information sent by Member States in March 2010 show an average decrease of 11.6 % in the income from agricultural activities (measured in real terms, as factor income per annual work unit) compared to 2008 for the European Union as a whole. The decrease in agricultural income results from a reduction in **agricultural labour input** (-2.3%), and a fall in **real agricultural income** (-13.6%). This decrease in EU-27 **real agricultural income** in 2009 is itself the result of a decrease in the **agricultural output value at basic prices** in real value terms (-10.9%, mainly reflecting lower output values of animal products (-17.6%), particularly milk, and crops (-13%)), and a fall in the real value of agricultural **intermediate consumption** (-9.2%). Slight decreases in **fixed capital consumption** (-0.2%) and **taxes paid on production** (-2.4%) contributed to lower production costs, while a 0.9% decrease in

1 Calculated as a residual from annual production(+), imports(+) and exports(-) and thus including stock changes(+/-).

2 Other fresh products include buttermilk, drinks with a milk base (e.g. chocolate milk) and other milk-based products, such as ice cream and desserts.

other subsidies paid reduced the level of revenues obtained by the agricultural sector in 2009. Agricultural income per worker in 2009 was below the 2008 levels in **twenty-one** Member States. The largest decreases were observed in Hungary (-32.2%), Luxembourg (-25.5%) and Ireland (-23.6%), while the largest increases were recorded in Malta (+7.8%), Denmark (+4.3%) and Finland (+2.6%).

14. The structural decline in the **agricultural labour force** input is assessed at – 2.3 % in 2009 as compared to 2008 for the whole EU. This moderate reduction constitutes a slow down compared to the early 2000s. The highest reduction in agricultural labour input was recorded in Bulgaria (-9.4%), Slovakia (-9%), Estonia (-6.9%), Latvia (-5%) and Sweden (-4%). Agricultural labour input increased in the UK (+1.8) and (slightly) in Hungary (+0.8%).

Changes in nominal farmgate prices in the EU-27 in 2009 and 2008 (%)

	Crop output		Animal output		Total output

Statistical and economic

information

Codification of the tables

The choices made for the revision of the tables are reflected in a new codification, established on the basis of the same principle for all the tables. Each of them has been given a code with four digits, the first of which designates the subject to which the table refers (see table of contents following this foreword):

1. Conversion rates,
2. Basic data,
3. Economic tables,
4 . Tables on agricultural markets.

The second and third digits refer to specific aspects of the field concerned and their significance varies from one field to another.

For the tables concerning the agricultural markets (Tables 4) a standard codification for all the products has been used for these two digits:

(i) the second digit of the code designates the agricultural product concerned,

(ii) the third digit refers to the nature of the statistic presented:

–.–.0.– livestock numbers,

–.–.1.– area, yields and production (crop products) or slaughterings and production (livestock products),

–.–.2.– world production,

–.–.3.– external trade,

–.–.4.– supply balance,

–.–.5.– prices (producer prices, market prices, consumer prices),

–.–.6.– market management,

–.–.9.– various.

For certain sectors, all the possibilities are used (e.g. cereals). For other products only some are used (e.g. potatoes), either because the data needed are not available or because the features of these sectors in the EU do not justify such an exhaustive presentation in a general document such as this, which, for considerations of space, can provide only the most important information.

Currency units used in this report

1. European Monetary System (EMS) – ecu

Entry into force of the EMS on 13 March 1979 (Regulations (EEC) No 3180/78 and No 3181/78 of 18 December 1978) brought in the ecu as sole unit of account for the Community. Its definition is identical to that of its predecessor the EUA except for a review clause allowing changes in its composition. The ecu is a currency unit of the 'asket' type made up of specified amounts of currencies of the EMS member countries determined mainly on the basis of the economic size of each. It is defined by Council Regulation (EC) No 3320/94. The central rates used in this system are rates set by the central banks around which the market rates of the EMS currencies may fluctuate within spot margins.

2. The ecu in the common agricultural policy

- Before 9 April 1979, the unit of account used in the agricultural sector was the u.a. defined by Regulation (EEC) No 129/62 and the representative rates (green rates) were fixed by the Council.
- On 9 April, the ecu began to be used in the CAP (Regulation (EEC) No 652/79) and is still being used (Regulation (EEC) No 3813/92).
- On the changeover from the u.a. to the ecu on 9 April 1979 common agricultural prices and amounts expressed in u.a. and converted into ecus were adjusted by the coefficient 1.208953. The green rates were however adjusted by the reciprocal coefficient 1/1.208953, leaving national price levels unchanged.
  For example, 100 u.a. x 3.40 = DEM 340 because ECU 121 x 2.81 = DEM 340.
- For the recording of world market prices, offer prices are converted at the representative market rate, which is an average of the rates recorded on the market. The common agricultural prices and amounts are set in ecus and converted into national currency at the agricultural conversion rates.
- Since 1 January 1993 these have been adjusted by the Commission whenever their divergence from representative market rates exceeds specified margins.
- Between the beginning of the 1984/85 marketing year and 31 January 1995 all conversion rates used for agriculture were multiplied by a correcting factor under the 'switchover' mechanism the effect of which was to express the common agricultural prices and amounts in a unit of account derived from the ecu, the 'green ecu'. This correcting factor, originally 1.033651, was increased in line with the revaluation of the EMS currency appreciating most among those observing all the rules. On abolition it was 1.207509. As on the changeover from the u.a. to the ecu in 1979 common agricultural prices and amounts were increased in ecus by a factor of 1.207509 on 1 February 1995 and all conversion rates used in agriculture reduced by a factor of 1/1.207509 so making the operation neutral in national currency terms.

3. Introduction of the euro

On 1 January 1999, the currencies of the 11 Member States adopting the single currency were replaced by the euro but, during the transitional period until the end of 2001, units of national currency will continue to be used as subdivision of the euro. Series in ecus have been left unchanged as far as the past is concerned but are expressed in euros from 1 January 1999. Series in euro are the statistical continuation of series in ecus.

Fixed conversion rates of the euro

The conversion rates irrevocably fixed between the euro and the currencies of the Member States adopting the euro are:

EUR 1	=	40.3399 Belgian francs	
	=	1.95583 German marks	
	=	166.386 Spanish pesetas	
	=	6.55957 French francs	
	=	0.787564 Irish pounds	
	=	1936.27 Italian lire	
	=	40.3399 Luxembourg francs	
	=	2.20371 Dutch guilders	
	=	13.7603 Austrian schillings	
	=	200.482 Portuguese escudos	
	=	5.94573 Finnish marks	
	=	340.750 Greek drachmas	(On 1st January 2001)
	=	239.640 Tolar (pl. tolars)	(On 1st January 2007)
	=	0.58274 Cyprus pound	(On 1st January 2008)
	=	0.429300 Maltese lira	(On 1st January 2008)
	=	30.1260 Slovak koruna	(On 1st January 2009)

According to context, different currency units have been used in this publication. The statistical series in terms of value are also calculated:

- at constant exchange rates, i.e. at the exchange rates obtaining during a specific period (e.g. 1980). These rates are used to eliminate the influences of exchange-rate changes on a time series;
- at current exchange rates (notably for external trade).

To assist the user of this publication wishing to convert units of account into national currencies and conversely, Table 1.0.1 gives the rates to be used. Fuller information is given in specialized publications of the European Commission.

Observations on statistical method

A – Statistics on external trade – explanatory note

Council Regulation (EEC) No 1736/75, of 24 June 1975, on the external trade statistics of the Community and statistics of trade between Member States, includes provisions to ensure that data are not recorded twice:

(i) when goods from a non-member country are first brought into a Member State, that Member State must record the import according to the origin of the goods;

(ii) if the goods are then subject to a legal operation (for example clearance for consumption) and subsequently imported into another Member State, the latter must record the goods according to the Member State from which they were received.

However, to satisfy national requirements, the Member States may, if they wish, operate in parallel with the above system the arrangements they applied previously; this means that a Member State's national data may be substantially different from the data supplied by Community sources.

For the calculation of the intra-Community trade of the Community as a whole in the supply balances, there were two possibilities: the sum of the Member States' intra-Community exports (calculation on the basis of goods leaving) or the sum of the Member States' intra-Community imports (calculation on the basis of entries). Eurostat has chosen the second alternative. Also, exports to non-member countries in the supply balances of the Community as a whole are calculated by deducting intra-Community trade from Member States' total exports.

As a result, there may be discrepancies between the external trade data given in the supply balances and those given in the specific external trade tables.

Users must also allow for a break in the series of Community external trade statistics in 1977, the date on which Regulation (EEC) No 1736/75 entered into force.

A last point is that, while the data relating to the external trade of the Community of Twelve from reference year 1985 use the same source for all the Member States (Community statistics), those which refer to a previous period may have been obtained from the Community statistics for the Community of Ten and from other sources for the new Member States.

B – Definition of Agricultural Products for External Trade Statistics

Agricultural products are defined as follows:

Chapters 1 – 24 of the Combined Nomenclature excluding fish and fish products:

- chapter 03 fish and crustaceans, molluscs and other aquatic invertebrates
- 0511 91 90 products of fish and crustaceans, …..
- 1604 prepared fish; caviar, and caviar substitutes prepared from fish eggs
- 1605 prepared crustaceans, molluscs, and other aquatic invertebrates
- 1902 20 10 stuffed pasta, containing >20% fish, crustaceans, ….
- 2301 20 flours, meals and pellets of fish or crustaceans, …..

adding the following products outside the Chapters 1 to 24. ("Other products covered by the Uruguay Round Agreement"):

- 2905 43 mannitol
- 2905 44 D-glucitol (sorbitol)
- 2905 45 glycerol
- 3301 essential oils
- ex 3302 10 preps containing flavouring agents for beverages
- 3301 to 3305 albuminoidal substances, modified starches, glues
- 3809 10 finishing agents
- 3823 11 stearic acid
- 3823 12 oleic acid
- 3823 13 tall oil fatty acids
- 3823 19 other
- 3823 70 industrial fatty acids
- 3824 60 sorbitol n.e.p.
- 4101 to 4103 hides and skins

- 5201 to 5203 raw cotton, waste and carded or combed cotton
- 5301 raw flax
- 5302 raw hemp

C - Economic Accounts for Agriculture (EAA): implementation of a new methodology

1. The Economic Accounts for Agriculture are drawn up according to a new methodology, which was published in the "Manual on Economic Accounts for Agriculture and Forestry EAA/EAF (Rev. 1.1)" (EUROSTAT, 2000, ISBN 92-828-2996-0).

2. The introduction of the new methodology has resulted in a number of changes in the data, as a result both of the change in the methodology itself and of the use of new data sources. Some of the changes have had a direct impact on value added and thus on the measurement of agricultural incomes, whereas others have altered only the level of certain aggregates without, however, affecting value added and the measures of agricultural income.

3. The following methodological revisions affecting the measures of agricultural income can be noted:

   a. The recording of secondary, non-agricultural activities of agricultural units where these activities cannot be separated from the main agricultural activity. This mainly concerns the processing of agricultural products and agri-tourism.

   b. The exclusion of the output of units producing solely for own-final consumption (e.g. kitchen gardens).

   c. The exclusion of upstream and downstream production activity involved in seed multiplication.

   d. The recording of the output of wine and olive oil (from grapes and olives produced on the holding).

   e. The recording of various operations according to the principle of rights and obligations, meaning that the amounts are recorded during the year in which the claim or obligation, in the economic sense of the term, is created, transformed or removed. For example, the value of subsidies recorded in the accounts for year n corresponds to aid granted in year n even if all or part of the payment takes place in year n+1 or at a later date.

   f. The reclassification of certain agricultural aid which used to be classed as "operating subsidies" and which will now be recorded as "capital transfers". The value of this aid will no longer enter into the calculation of income.

4. Revisions which have had no impact on the measurement of income (all things being equal) concern:

   a. The valuation of output at basic prices. The basic price is defined as the price received by the producer, after deduction of all taxes on products but including all subsidies on products.

   b. The abandonment of the concept of national farm: besides production sold, stocked or for own-consumption by agricultural units, the production of the agricultural industry will now include a part of output used as intermediate consumption by the same unit (for example, grain or forage used in animal feed).

D – Annual rate of change (% TAV)

1. The annual rate of change (symbol: % TAV) is used throughout this report for the calculation over periods of time of changes in a given aggregate. It measures the compound annual average increase or reduction, as a percentage, of the variable concerned from a base year
(T in the following equations).
2. The annual rate of change is calculated as follows:

$$100 \times \text{Anti-Log}\left[\text{Log}\ \frac{(\text{statistic for year } T+N)}{(\text{statistic for year } T)} : N\right] - 100 = \%\ \text{TAV}$$

Where the annual rate of change is calculated over only two successive years, N = 1 and the formula becomes:

$$100 \times \left[\frac{\text{statistic for year } T+1}{\text{statistic for year } T}\right] - 100 = \%\ \text{TAV}$$

3. The following series illustrates the use of this formula:

	1990	1991 ...		1995	1996
Series =	100 000	112 000		161 051	177 156
	1991	1995	1996		
	1990	1990	1995		
% TAV	12,0	10,0	10,0		

Remarks

1. From 1991 data for the former German Democratic Republic are included in the figures for the Federal Republic of Germany and accordingly in the figures for the EU as a whole.

2. Present report was based on data available on 29/01/2009.

3. From 1 January 1997 statistics for France and Spain have been amended to include the French overseas departments (Guadeloupe, French Guiana, Martinique and Réunion) and the Canary Islands respectively.

4. Data on the Candidate Countries are gradually included in our tables. These data are mostly based on the figures provided by Eurostat and the Directorate-General for Agriculture and Rural Development. The process of harmonising the national statistics in the candidate countries is under way. The figures provided are therefore not fully comparable with the figures for the European Union and are expected to be revised frequently. We are publishing them for information only. The Commission cannot be held responsible for how the figures given for these countries are used or interpreted.

([1]) See notes on methods (C).

([2]) Productivity of intermediate consumption is measured by the ratio between the index of the output volume in the agricultural activities sector and the index of intermediate consumption volume.

([3]) The 'terms of trade' in agriculture are measured by the ratio between the index of nominal output prices in the agricultural industry and the index of nominal intermediate consumption prices.

([4]) Not including Cyprus.

(1) See methodological notes (C).
(2) Figures 2006.
(3) Factor income corresponds to the net value added at factor cost of agriculture.
(4) Besides the output of agricultural goods and services, the output in agricultural activities sector comprises also the output of certain non-agricultural secondary activities.
(5) Other production costs = Fixed capital consumption + compensation of employees + rents and other real estate rental charges to be paid + net interest payments.
(6) Berlin: Hamburg and Bremen included.
(7) Different dates, depending on the Member State, used to calculate EU-27, EU-25 and EU-15 figures.

Map 3.1.15 col 5

3.2.1 **The farm accountancy data network – Explanatory note**

The farm accountancy data network (FADN) collects accountancy data from a sample of agricultural holdings in the Community. The FADN field of survey relates to 'commercial' farms, i.e. farms which market the bulk of their production and which exceed a minimum level of economic activity defined in terms of economic size (see the definition of the European size unit below).

In the most recent accounting years there were more than 75 000 holdings (Community of 25 Member States) representative of commercial farms in the FADN sample. From **the** accounting year **2007** onwards this number **increased** to **more than** 80 000 holdings due to the further enlargement.

The terms used in the tables relate to the following definitions.

BASIC FADN TERMS

Accounting year

The accounting year is a 12-month period starting between 1 January and 1 July, the exact date varying from one Member State to another.

Economic size and European size unit (ESU)

The European size unit (ESU) is a unit of measurement of the economic size of the agricultural holding. A farm has an economic size of 1 ESU if its total standard gross margin is EURO 1 200 of SGM. The standard gross margin for each enterprise corresponds to the average value, over a three-year period and in a given region, of production minus certain variable costs (Decision 85/377/EEC).

Type of farming (TF)

The type of farming (TF) of a holding is determined by the relative share in the holding's total standard gross margin of each of the enterprises of the holding. A description is given in Table 3.2.2. The results given in the following tables relate to eight groups aggregated from the 17 principal types of farming in the Community farm typology (Decision 85/377/EEC).

Weighting and number of holdings represented

The holdings in the FADN sample are selected in such a way as to be representative, for each division, of the holdings belonging to each cell formed by the combination of TF and economic size class. The populations to be represented are derived from the Community farm structure surveys.

3.2.1S1

The results presented are weighted averages. Each holding in the FADN sample is attributed a weight proportional to the number of holdings belonging to the same type of farming and the same economic size class in the division.

The number of holdings represented is the sum of the weights of the holdings in the sample. Some cells (division – TF – economic size class) may have no holdings in the sample, either because very high selection rates would be necessary or because there are technical difficulties in selecting holdings.

STRUCTURAL DATA

UAA: utilized agricultural area (in hectares).

Annual work unit (AWU and FWU)

This represents the agricultural work done by one full-time worker in one year. Part-time and seasonal work are fractions of an AWU.

An FWU is an AWU of unpaid (family) labour.

AVERAGE RESULTS PER HOLDING

Total output

This is the value of total production during the accounting year. Included are off-farm sales, home-grown feed and seed, farmhouse consumption and benefits in kind, as well as changes in the value of livestock and stocks of crop products.

Intermediate consumption

This corresponds to all the fixed and variable costs that are necessary for agricultural activity and includes home-grown feed and seed but excludes financial charges, labour costs, rent and depreciation.

Depreciation

This is the annual provision designed to replace the fixed components of working capital at the end of their life (buildings, machinery, equipment, etc.). It is calculated on the basis of replacement value.

3.2.1S2

Farm net value-added (FNVA)

Total output less intermediate consumption and depreciation, adjusted to take account of taxes, grants and subsidies linked to production.

This is an indicator of the economic performance of the holding. It remunerates family and hired labour, own and borrowed capital and the management of the holding.

Family farm income (FFI)

This corresponds to farm net value-added, less other real costs in the accounting year: interest and financial charges, wages and social security costs paid and rent.

This indicator represents the return on the labour of farmer and family, and on owned capital.

3.2.2 **The eight types of farming: shares of each enterprise in total output**

Description of the types of farming in Table 3.2.3

Type of farming (principal types) EU-27	TF codes	Enterprise output as % of total output

([1]) New Member States (Bulgaria, Romania) entered FADN from 2007.
([2]) Results for groups of less than 15 holdings are not considered representative and are therefore not included in the table, although they are included in totals.
([3]) Use with caution because the figures include farm holdings for which this variable is not relevant (e.g. companies and cooperatives).
([4]) Provisional results for 2007.
([5]) The totals may not add up due to rounding of the numbers of represented farms.

Source: European Commission, Agriculture and Rural Development DG, FADN (population : 2007 structure survey; classification : standard gross margins «2004»).

([1]) New Member States (Bulgaria, Romania) entered FADN from 2007.

([2]) Results for groups of less than 15 holdings are not considered representative and are therefore not included in the table, although they are included in totals.

([3]) Use with caution because the figures include farm holdings for which this variable is not relevant (e.g. companies and cooperatives).

([4]) Provisional results for 2007.

([5]) The totals may not add up due to rounding of the numbers of represented farms.

Source: European Commission, Agriculture and Rural Development DG, FADN (population : 2007 structure survey; classification : standard gross margins «2004»).

(1) The EU index of farm input prices is a Laspeyres index, whereas the deflated price series (see Table 3.1.8) is a Paasche index. The discrepancies between the figures in the two tables are mainly a matter of the differing index formulae.

(2) Indices of the prices of goods and services of current agricultural consumption.

(3) Annual indices include fruit and vegetables.

(4) *Source:* SCEES.

Source: European Commission, Eurostat ('Purchase price of inputs' and 'Producer prices for agricultural products' are harmonized indices, whereas 'Farm wages' remain heterogeneous national indices).

3.3.7 **Price indices for feedingstuffs, fertilizers and soil improvement, fuels and lubricants, and investments in machinery** (excluding VAT)

(*2000 = 100*)

3.5.1.1 **Employment in agriculture: statistical sources and applications**

There are several sources of Community statistics enabling employment in agriculture to be measured from various viewpoints, including *employment* statistics proper (labour force sample survey) and *agricultural* statistics (structural surveys of agricultural holdings). Methods and concepts vary from one source to another, and the purpose of this introduction is to help the user to choose, among the statistics given in the subsequent tables, those which will provide him with the information he seeks.

EMPLOYMENT IN AGRICULTURE AND IN THE OTHER SECTORS

One approach to the problem of employment in agriculture consists in considering it as a part of overall employment and comparing it with employment in the other economic sectors. The relevant information comes from employment statistics; in these figures, the persons employed are assigned to that economic sector in which they mainly work, and the characteristics of employment are measured according to identical concepts from one sector to another. Changes over time in numbers employed in the various sectors, and, in particular, in agriculture, are measured on the basis of *annual employment estimates* (Tables 3.5.1.2 and 3.5.1.3). For detailed information on the structure of employment in agriculture compared with that of other sectors (breakdown by sex, by occupational status, by working time, or by age), reference must be made to the *labour force survey* , which provides a 'photograph' of employment in any given year (Table 3.5.1.4).

EMPLOYMENT IN AGRICULTURAL HOLDINGS

Only the statistics which have just been presented allow a proper comparison of employment in agriculture with employment in the other sectors. However, they do not cover all persons employed in agriculture: an important feature of farming is that so many farmers and farm workers work only part-time and often also have other jobs. In the employment statistics, such persons are not classified as working in agriculture.

A full measure of employment in agriculture is provided by the *surveys on the structure of agricultural holdings* ; it should be noted that the information from this source enables employment in agriculture to be analysed as such but that, as it is established according to specific definitions, it cannot be compared with employment data for other sectors.

These surveys cover all persons employed on holdings, whether farming is their main activity or not; they also record working hours and any other remunerated work outside farming. They thus enable employment on agricultural holdings to be measured fully, and part-time and combined other employment to be analysed. By conversion of the numbers of persons employed into full-time equivalent workers ('annual work units' – AWU), the data on working hours give information on the actual volume of labour devoted to farming, the only valid measure of the labour contribution to agriculture, in view of the scale of part-time working (Tables 3.5.1.5 and 3.5.1.6).

3.5.1.2 **'Persons employed'** ([1]) **in 'agriculture, hunting, forestry and fishing' (2003 - 2008)**

(1) Sole holders who are also managers. The holder is the person for whom and on whose behalf the holding is farmed; the manager is the person responsible for the current, day-to-day management of the holding. In EU-25 in 2003, 93 % of agricultural holdings were farmed by holders who arealso managers.

(2) Holders working their farms for respectively 100 %, 50 to< 100 %, and less than 50 % of the annual working hours of a full-time worker.

Source: European Commission, Eurostat (Surveys of the structure of agricultural holdings).

([1]) Regulation (EC) No 1973/2004 - Annex XXI
The agricultural area under the single area payment scheme set out in Annex XXI of Commission Regulation (EC) No 1973/2004 is a regulatory area used to calculate the national aid amount per hectare. The total number of eligible area declared by the farmer in a given calendar year may vary from that area.

([2]) Provisional figures supplied by the Member States and subject to verification and control by the Commission.

([3]) The agricultural area under the single area payment scheme in the Slovak Republic hat been set at 1 880 thousand hectares as from 2009.

NB: The figures for forests and other wooded land meet the FRA 2005 definitions.
By definition, forests and other wooded land must have a canopy cover of more than 10%.

(1) Includes category "other ownership"

(2) Ministerial Conference on the Protection of Forests in Europe,

Agriculture in the European Union - Statistical and Economic Information - Report 2009

Luxembourg: Publications Office of the European Union

2010 — 393 pp. — 21.0 x 29.7 cm

ISBN 978-92-79-15231-3

ISSN 1683-6480

DOI 10.2762/18146

Price : (excluding VAT) in Luxembourg: € 10,00

How to obtain EU publications

Free publications:

- via EU Bookshop (http://bookshop.europa.eu);
- at the European Commission's Representations or the Delegations of the European Union. You can obtain their contact details by linking http://ec.europa.eu or by sending a fax to +352 2929-42758.

Publications for sale:

- via EU Bookshop (http://bookshop.europa.eu);

Priced subscriptions (Official Journal of the EU, Legal cases of the Court of Justice as well as certain periodicals edited by the European Commission) can be ordered from one of our sales agents.

- You can obtain their contact details by linking http://bookshop.europa.eu, or by sending a fax to +352 2929-42758.

KF-AC-10-001-EN-C

Each year the Commission Directorate- General for Agriculture and Rural Development publishes the "Agriculture in the European Union - Statistical and economic information". A large part of the report is devoted to statistical information on Community agriculture. This is drawn up on the basis of information from Eurostat and data collected by the Directorate-General for Agriculture and Rural Development.

The statistical information presented here covers a wide range of subjects: the economic situation in agriculture, structures, trade, markets, financial aspects and rural development. An introductory chapter gives an overview of the 2009 agricultural year. It includes a wide range of statistical information on agriculture in the 27 Member States and in the accession Countries for EU membership.
