PREPARATION OF THIS DOCUMENT

The data presented in this document are based on the fishery module of FAOSTAT, the statistical component of the FAO World Agricultural Information Centre (WAICENT). These data have been used to prepare food balance sheets globally and by selected country groupings as well as by individual countries. The role of fish in supplying protein and other nutritional factors to the average diet is also indicated.

The statistical data contained in the document have been compiled by G. Laurenti, Fishery Information, Data and Statistics Unit (FIDI), on the basis of records held in the Fishery Statistical Database in December 2003 and of other official and non-official data and information available to FIDI.

Inquiries about the technical content of this publication and requests for copies should be sent to:

The FAO Fisheries Circular is a vehicle for distribution for short or ephemeral notes, lists, etc., including provisional versions of documents to be issued later in other series.

Laurenti, G. (comp.)
1961–2001 fish and fishery products: world apparent consumption statistics based on food balance sheets.
FAO Fisheries Circular. No. 821, Rev. 7. Rome, FAO. 2004. 425p.

ABSTRACT

The document summarizes four decades of statistics of apparent consumption of fish and fishery products based on supply/utilization accounts, for 220 countries, six continental aggregates, four economic groupings and world totals. Data are given for total and per caput supply in live weight on a yearly basis. Indicative nutritional values in terms of animal and total proteins are also provided. For 40 major food fish consuming countries, balances are provided for supply in quantities and nutritional factors of eight main groups of species of similar biological characteristics. A section comprising descriptive and analytical graphs supplements the data.

FOREWORD

The central role of apparent consumption statistics for fish and fishery products in consideration of food security and nutrition issues is illustrated by the fact that such data were disseminated for the International Conference on Nutrition (Rome, 5–11 December 1992), the World Food Summit (Rome, 13–17 November 1996) and the World Food Summit: five years later (Rome, 10–13 June 2002).

From its foundation, FAO has recognized the importance of fish as a food source, particularly for its role in protein supply. In its first report on Fisheries¹ published in 1945, FAO stated that "... fish should be regarded as one of the most important sources of food in any program for raising the nutritional levels of peoples throughout the world". The same report contained the first estimate of average world fish consumption per caput published by FAO which was five pounds of edible fish meat per year (or about 5.4 kg live weight per year) and this probably referred to years before the Second World War. However, no consumption information for individual countries was provided and the report commented that national consumption figures, where available, are often not comparable due to the use of different methodologies. Further, it stated that "Accurate comparison must await the preparation of more complete and standardized international fishery statistics".

International fishery statistics are still far from perfect but they have improved during the last five decades and the promotion of standard definitions, classifications and methodologies by FAO and other organizations has made them more comparable. The data in this publication are based on food balance sheets, which have been constructed from statistics on fish production, disposition of landings, commodity production and trade on the basis of eight major groups of species of similar biological characteristics and nine commodity groups. This publication shows summary food balance sheets by country and for some aggregations for years between 1961 and 2001 which allow trends in elements such as per caput fish supply and its contribution to protein supply to be examined. It also presents the composition of the total supply subdivided into major groups of species for the 40 largest consumers of food fish.

World average per caput supply of fish grew from 9.0 kg in 1961 to 16.3 kg in 2001. Fish provides a major source of protein for many countries, including many Small Island Developing States (SIDS). Compared to an average annual compound growth rate in per caput animal protein supply of 0.9 percent during 1961–2001, per caput world fish protein supply showed a rate of 1.3 percent. Some developing countries are particularly dependent on fish for food and all but five of the top 40 fish-consuming countries (in terms of fish as a proportion of animal protein) are from the developing world. It is notable that of 22 countries classified by FAO as most seriously undernourished (i.e. with 35 percent or more of the people undernourished)², seven are amongst the most dependent on fish as a source of animal protein (i.e. fish providing more than 20 percent of animal protein).

¹ FAO. 1945. *Five technical reports on food and agriculture: fisheries*. Report of the technical committee on fisheries, submitted to the United Nations Interim Commission on Food and Agriculture. Washington. pp. 175–216

² FAO. 2003. *The state of food insecurity in the world 2003*. (Available at www.fao.org).

The contribution of national fishery statistical offices in providing basic statistics required for the construction of these food balance sheets is gratefully acknowledged. Where such basic statistics are lacking or considered unreliable, data from other sources have been utilized, when available, and FAO estimates used when there are no other usable data.

FAO welcomes comments on these statistics and suggestions as to how they can be improved. Comments may be sent to the address below.

INTRODUCTION

This document presents a compendium of four decades of statistics of apparent consumption for fish and fishery products for 220 countries, six continental aggregates, four economic groupings and global totals based on the Supply/Utilization Accounts (SUAs) maintained in FAOSTAT, the statistical component of the FAO World Agricultural Information Centre (WAICENT).

The system currently includes SUAs for eight groups of primary fishery commodities and nine groups of processed products derived from them for almost all the countries and areas in the world from 1961 to 2001. SUAs contain the estimates of supplies from different sources matched against estimates of different forms of utilization of each product. These series are regularly updated and revised in the light of any new information. Accordingly, the food balance sheets derived from the SUAs of food products are consistent internally. In FAO's work these data are required to meet the requests of its statutory bodies to keep the world's food and nutritional situation under constant review, to update FAO's analytical work in the field of food and population and to provide the statistical base for the projections of demand and other assessment studies.

The food balance sheets included in this document have been calculated from individual SUAs series for each primary and processed fishery commodity, prepared on a calendar-year basis. In constructing the SUAs and the food balance sheets derived from them, both official and unofficial data available in the database of the Fishery Information, Data and Statistics Unit have been used.

In order to facilitate descriptions and analyses of data, graphs are provided. Section 1 presents summary food balance sheets for the world in 2001 and long-term series starting from 1961 and ending with 2001, in live weight, for continental aggregates, economic groupings and global totals. On each food balance sheet the fish contribution to animal and total protein supply is indicated as a percentage. Section 2 gives, in live weight, the same data as described in Section 1, for 220 countries that represent more than 99 percent of the world population. For 40 major food fish consuming countries, whose aggregated population represents 81 percent of the world total, food fish balance in live weight, including fish-derived calories, proteins and fats, are provided as five-year averages for each decade and for the six most recent years (1996–2001). The balances, provided by totals and eight main groups of fish species, are presented in Section 3.

The derived consumption data are as reliable as the basic production, trade and domestic utilization data on which they are based. Trends in food availability may reflect improved primary data rather than real changes in food intake. For a full description of the concepts used in the construction of food balance sheets and the major shortcomings of such data as indicators of consumption, the reader may refer to the publications indicated in References (in particular to: "Food balance sheets. A handbook": FAO, 2001, also available at <http://www.fao.org/DOCREP/003/X9892E/X9892E00.HTM>). Nutritional values have been calculated utilizing appropriate standard food composition factors (see Appendix 1).

For detailed information on other food commodities and the role of fish in national diets, see the FAOSTAT/WAICENT domain Food Balance Sheets at: <http://www.fao.org>

For detailed fishery production statistics please see <http://faostat.fao.org/faostat/collections?subset=fisheries>.

More disaggregated fishery production and trade statistics of specific products are accessible as downloadable databases, together with a retrieval and analytical software, FISHSTAT PLUS, at <http://www.fao.org/fi/statist/FISOFT/FISHPLUS.asp> or as online databases at <http://www.fao.org/figis/servlet?dom=root&xml=tseries/index.xml>.

GENERAL NOTES

| | |
|-------------------|---|
| Data | The data shown in this document were calculated on the basis of information available to the Fishery Information, Data and Statistics Unit in December 2003. Therefore, in certain instances, discrepancies may occur with fishery data held in the fishery statistical database published in the latest volumes of the FAO Yearbooks of Fishery Statistics. Where necessary, the data published in preceding issues of this Circular have been revised. |
| Country names | Countries are indicated by the FAO English name used for statistical purposes (12 and 24 characters). They are listed in alphabetical order and preceded by their FAOSTAT Code. |
| Population | Refers to the present-in-area (de facto) population, i.e. includes all persons physically present within the geographical boundaries of countries, at the mid-point of the reference period. The source of the data is <i>World population prospects. The 2000 revision</i> , published by the Population Division of the UN in 2001. |
| Live weight | The weight of finfish and shellfish at the time of their capture or harvest. Calculated on the basis of conversion factors from landed to nominal weight and on rates prevailing among national industries for each type of processing. |
| Production | Refers to <u>catch and culture</u> of all fish, crustaceans, molluscs and aquatic organisms. |
| Non-food uses | Include utilization of aquatic products for reduction to meal and oil, for feed and bait, for ornamental purposes, withdrawals from markets and any other non-food use of fish production (e.g. fertilizers, medical uses). |
| Imports/exports | In accordance with the internationally-recommended practice, imports and exports statistics have been adjusted to include as imports fish caught by foreign fishing vessels and landed in domestic ports and as exports fish caught by domestic fishing vessels and landed directly in foreign ports. World totals of major groups of species may be understated due to statistics being reported as unspecified fish in some national trade statistics. This results also in imbalances between figures for world imports and exports of given major groups. |
| Stocks | Information on changes in stocks occurring between the production and the retail levels, or in levels of inventories, is very incomplete. In most instances data indicated are the minimum required to avoid a negative balance. |
| Total food supply | The total fish available for apparent human consumption is derived by using the following equation: $\text{total food supply equals production less reduction to meal and other non-food uses, plus imports, less exports and re-exports, plus or less variation in stocks.}$ |

All calculations have been made in terms of live-weight equivalent.

| | |
|-----------------------|---|
| Per caput food supply | The estimate of the total supply available for human consumption divided by the population total. |
| Percentages | Percentages have been calculated on <u>unrounded</u> figures, though such figures are rounded in the tables due to space requirements. |
| Standard symbols | ... = data not available/unavailable 0 ; 0.0 = magnitude known to be nil or more than zero, but less than half the unit used. |
| Groups of species | Statistics of apparent consumption for finfish and shellfish are divided into the following eight broad groups of species: <ul style="list-style-type: none"> { Freshwater: including carps, barbels, tilapias, etc. { Diadromous: including sturgeons, eels, salmon, trouts, shads, etc. Demersal: including flatfishes, cods, hakes, haddocks, redfishes, sharks, coastal demersal fish, etc. Pelagic: including anchovies, herrings, sardines, tunas, mackerels, etc. Marine unspecified: including unidentified marine fish. Crustaceans: including crabs, lobsters, shrimps, krill, etc. Molluscs: including abalones, oysters, mussels, scallops, clams, etc. Cephalopods: including squids, cuttlefishes, octopuses, etc. Aquatic animals: including frogs, turtles, sea-cucumbers, sea-urchins, etc. |

For more detailed information on catch and culture, trade composition and other variables, please refer to the FAO Yearbooks of Fishery Statistics. For information on food consumption in general, please refer to relevant publications included in References (page 424).

NOTES ON GRAPHS

This section includes statistical graphs based on 2001 data and data from the whole time series contained in this report and analysed for the world, continents and economic groupings.

NOTES ON SECTION 1

This section provides 2001 food balance sheets for fish and fishery products in live weight for the world total, six global tables by country, continent and economic groupings and two tables by major food fish consuming countries. Balances are also provided from 1961–2001 for 11 tables showing totals for continents and economic groupings including and excluding China, one table showing 1961–1991 for the area of former USSR and two tables for world and world excluding China totals. In addition, yearly calculation of percentages of fish contribution to animal and total proteins are provided in each of the above tables.

The quality of data in the time series may vary.

NOTES ON SECTION 2

This section provides yearly food balance sheet for fish and fishery products in live weight for 220 countries from 1961 to 2001. As for Section 1, yearly calculation of percentages of fish contribution to animal and total proteins are provided.

The quality of data in the time series may vary.

NOTES ON SECTION 3

This Section provides, for 40 major food fish consuming countries and the world total, food balance sheets in live weight for eight main groups of species (see pages xi and xiii) and the total calculated as five-year averages for each decade and for the last four most recent years (1996–2001). Fish nutritional factors for calories, proteins and fats are also provided. Stock variations are not indicated.

The quality of data in the time series may vary.

Note: the table shows the major 70 countries ranked by total food fish supply above 100,000 tonnes. For the first 40 countries see also Section 3 providing breakdown by major species groups. The aggregated consumption of the above listed countries accounts for 96.8% of the world total. See notes on China at page 115.

Note: data refer to the area that was formerly the Union of the Soviet Socialist Republics. Starting with 1992 the 15 new independent Republics have been included with Asia (Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Uzbekistan) and Europe (Belarus, Estonia, Latvia, Lithuania, Republic of Moldova, Russian Federation, Ukraine).

Note: formerly Kampuchea. 1999-2001 higher food supply is due to the introduction of a new methodology to estimate production of semi-commercial and subsistence fisheries in inland waters. Production figures subject to possible upward revisions to account for small-scale production and rice-field fisheries, presently underestimated.

Note: for statistical purposes, the data for China do not include Hong Kong Special Administrative Region (Hong Kong SAR) and Taiwan Province of China. Production data, considered to be overstated since the early 1990s, under review and subject to possible downward revisions. Non-food uses include indicative estimates of amounts of fish used as direct feed in aquaculture and fur farms.

Note: prior to 1983 supply data are not consistent with results of national consumption survey, probably due to an underestimated production.

SECTION 3

FISH AND FISHERY PRODUCTS

**FOOD BALANCE SHEETS
BY MAIN GROUPS OF FISH SPECIES
AND FISH NUTRITIONAL FACTORS**

BY SELECTED COUNTRIES

1961/1965, 1971/1975, 1981/1985, 1991/1995 averages
and 1996–2001

(Live weight)

SECTION 3 Index of food balance sheets by main groups of fish species by selected countries

| Country | Page | Country | Page |
|------------------------|------|--------------------------|------|
| WORLD | 297 | | |
| Argentina | 300 | Mexico | 360 |
| Australia | 303 | Myanmar | 363 |
| Bangladesh | 306 | Netherlands | 366 |
| Brazil | 309 | Nigeria | 369 |
| Cambodia | 312 | Pakistan | 372 |
| Canada | 315 | Peru | 375 |
| China | 318 | Philippines | 378 |
| China, Hong Kong SAR | 321 | Poland | 381 |
| China, Taiwan Province | 324 | Portugal | 384 |
| Egypt | 327 | Russian Federation | 387 |
| France | 330 | South Africa | 390 |
| Germany | 333 | Spain | 393 |
| Ghana | 336 | Sri Lanka | 396 |
| India | 339 | Thailand | 399 |
| Indonesia | 342 | Turkey | 402 |
| Iran, Islamic Rep. of | 345 | Ukraine | 405 |
| Italy | 348 | United Kingdom | 408 |
| Japan | 351 | United States of America | 411 |
| Korea, Republic of | 354 | Venezuela | 414 |
| Malaysia | 357 | Viet Nam | 417 |

Note: countries representing the 40 major food fish consumers on the basis of food fish supply. Their aggregated consumption accounts for 91.4% of the world total. (See also table on page 54–55). Totals have been calculated on unrounded figures, though such figures are rounded in the tabulations due to space requirements. Countries are indicated by the FAO name for statistical purposes. They are listed in alphabetical order and preceded by FAOSTAT code.

Note: variations in stocks not shown. Discrepancies in the estimated live-weight equivalent of trade are largely due to the fact that export statistics of many developing countries do not provide sufficient details on the level of processing of the traded products or on the classification of species.

Note: formerly Kampuchea. 1999-2001 higher food supply is due to the introduction of a new methodology to estimate production of semi-commercial and subsistence production of semi-commercial and subsistence fisheries in inland waters. Production figures subject to possible upward revisions to account for small-scale production and rice-field fisheries, presently underestimated. Variations in stocks not shown.

Note: for statistical purposes, the data for China do not include Hong Kong Special Administrative Region and Taiwan Province of China. Production data, considered to be overstated since the early 1990s, under review and subject to possible downward revisions. Non-food uses include indicative estimates of amounts of fish used as direct feed in aquaculture and fur farms. Variations in stocks not shown.

Definitions of FAOSTAT fish food commodities

Appendix 2

| Commodity | Definitions, coverage, remarks |
|---|---|
| <p>Freshwater and Diadromous Fresh Barb, burbot, carps, catfish, dace, freshwater breams, freshwater drum, gabies, giant sea perch=barramundi, gourami, gudgeons, mandarin fish, milkfish, nile perch, paddlefishes, perch, pike, river eels, salmons, shads, sleepers, smelts, snakehead, sturgeons, tenchs, tilapias, trouts and miscellaneous freshwater and diadromous fishes, etc.</p> | <p>Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| <p>Freshwater and Diadromous Frozen Whole</p> | <p>Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| <p>Freshwater Fillets</p> | <p>Fresh raw fillets (all edible).</p> |
| <p>Freshwater Frozen Fillets</p> | <p>Frozen raw fillets (all edible).</p> |
| <p>Freshwater Cured Examples are: dried salted sturgeon (balyk), smoked salmon, smoked trout.</p> | <p>Salted, dried, smoked whole fish or fillets. The inedible part of the whole fish is 20–50%.</p> |
| <p>Freshwater Canned Examples are: salmon canned in brine, unagi (eel) in vacuum packs.</p> | <p>Headed, gutted or filleted in airtight containers, in brine, oil or other medium (all edible).</p> |
| <p>Freshwater Preparations not elsewhere specified Examples are: caviar, red caviar, caviar substitutes, tarama (carp roes), fried and marinated eels.</p> | <p>Fresh or frozen whole fish or fillets then cooked (inedible part is 0–50%). Fish roes (carp, salmon, trout, sturgeon, lumpfish), also mixed with additional ingredients. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, spreads.</p> |
| <p>Demersal Marine Fish Fresh Alaska pollack, angler (=monk), Australian salmon, bogue, Bombay duck, bonefish, breams, chimaera, chub, cod, conger, conger/sand eel, croaker, dentex, dogfish, dorie, drums, emperor, filefish, flatfishes, flounder, fusilier, gobies, grenadier (=hoki), grouper, grunt, guitarfish, gurnard, haddock, hake, halibut, icefish, ladyfish, lanternfish, ling, lizardfish, lumbfish, mojarra, moonfish (except Atlantic, African), mullet, orange perch, orange roughy, Pacific perch, pandora, Patagonian toothfish, picarel, plaice, puffer, ray, redfish, rockfish, saithe (=Pollock), sandeel, scabbardfish, sea bass, sea bream, sea catfish, sea perch, shark, skate, smooth-hounds, snapper, soles, spinefeet, steenbras, surgeeon, tarpon, tilefish, threadfin, triggerfish, turbot, tusk (=cusck), warehou, weakfish, weever, whitefish, whiting, wolfish (=catfish), wrasse, etc.</p> | <p>Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| <p>Demersal Frozen Whole</p> | <p>Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| <p>Demersal Fillets</p> | <p>Fresh raw fillets (all edible).</p> |
| <p>Demersal Frozen Fillets</p> | <p>Frozen raw fillets (all edible).</p> |
| <p>Demersal Cured Examples are: stockfish, klipfish, dried shark meat, etc.</p> | <p>Gutted and headed fish or fillets, unsalted or salted, dried (sun/air dried or machine dried) with different levels of residual moisture; brined or pickled using salt, vinegar, sugar and spices, smoked (dry or hot processing). The inedible part of the whole fish is 20–50%. For skin-on fillets the inedible part is 0–5%. This group also includes by-products as fish heads, tails, maws, tongues, fins, etc. used mostly for soups.</p> |
| <p>Demersal Canned Examples are: cod, pollack, coalfish canned in oil.</p> | <p>Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium, treated at temperatures adequate to ensure sterilization (all edible).</p> |
| <p>Demersal Preparations not elsewhere specified Examples are: kneaded surimi, kamaboko, crab and shrimp analogues (imitation crab legs and shrimp products), fish minced, sticks, portions, fingers, medallions (battered and breaded), sevrache, tara (cod roes), mullet bottarga and karasumi.</p> | <p>Fillets (inedible part is 0–50%) or meat of fresh or frozen fish (as in surimi), often cooked (all edible), battered and breaded sticks, portions, medallions prepared also from minced fish. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage (generally 50–60% is fish), sauce, soups, spreads. Roes of mullets or cods.</p> |

Appendix 2

| Commodity | Definitions, coverage, remarks |
|--|--|
| <p>Pelagic Marine Fish Fresh Albacore, amberjack, anchovy, barracuda, bonito, bluefish, bumper, butterfish, capelin, cobia, crevalle, dolphin, flyingfish, halibut, herring, jack, mackerel, marlin, menhaden, moonfish (Atlantic, African), needlefish, opah, pomfrets, pompano, sailfish, sardine, sardine (=pilchard), saurie, scad, seerfish, shad, spearfish, sprat, swordfish, tuna, etc.</p> | <p>Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| Pelagic Frozen Whole | <p>Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| Pelagic Filets | <p>Fresh raw filets (all edible).</p> |
| Pelagic Frozen Filets | <p>Frozen raw filets (all edible).</p> |
| <p>Pelagic Cured Examples are: smoked herring, salted anchovies, dried sardine, salted tuna, dried skipjack, dried shad.</p> | <p>Salted, dried, smoked filets or whole fish (all edible). Fish protein concentrates (edible odourless preparations containing about 80% of proteins and 1% fat).</p> |
| Pelagic Canned | <p>Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium treated at temperatures adequate to ensure sterilization (all edible).</p> |
| <p>Pelagic Preparations not elsewhere specified Examples are: anchovy butter, skinned filets of brine salted sprat in solutions of vinegar, salt, sugar and spices, marinated herrings, fermented fish sauces, fermented fish paste, rollmops, tidbits, shokara (fermented skipjack viscera), tuna bottarga.</p> | <p>Whole fish boiled, cooked, fermented or marinated (may include a little inedible percentage). Portions, medallions prepared from minced fish with the addition of starchy substances. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, soups, spreads. By-products (heads, etc.) used mostly for soups; fermented viscera. Roes of tuna, herring, capelin.</p> |
| <p>Marine Fish not elsewhere specified Fresh Groundfishes (=demersal), pelagic fishes, other marine fishes, etc.</p> | <p>Unspecified fresh raw pelagic and demersal fishes. Fresh raw whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| Marine Fish nes Frozen Whole | <p>Frozen raw gutted whole fish including bones, skin, head, etc. The inedible part of the whole fish is 20–50%.</p> |
| Marine Fish nes Filets | <p>Fresh raw filets (all edible).</p> |
| Marine Fish nes Frozen Filets | <p>Frozen raw filets (all edible).</p> |
| Marine Fish nes Cured | <p>Salted, dried, smoked whole fish or filets (all edible).</p> |
| Marine Fish nes Canned | <p>Headed, gutted, scaled, skinned or filleted fish in airtight containers, in brine, oil or other medium treated at temperatures adequate to ensure sterilization (all edible).</p> |
| <p>Marine Fish nes Preparations not elsewhere specified Examples are: escabeche (fish dried and then marinated), shredded and flaked products, fish sauces (garum, patis, nuoc-mam), fermented fish pastes (nga-pi).</p> | <p>Filets (inedible part is 0–50%) or meat of fresh or frozen fish (as in surimi), often cooked (all edible), battered and breaded sticks, portions, medallions prepared also from minced fish. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage (generally 50–60% is fish), sauce, soups, spreads. By-products (heads, etc.) used mostly for soups; fermented viscera. Fish roes.</p> |
| <p>Crustaceans Fresh Freshwater and seawater crustaceans: barnacle, crabs, crayfish, krill, lobsters, prawns, river prawns and shrimps, sea-spider, shrimp, spiny-rock lobsters, squillids, stomatopods, etc.</p> | <p>Raw whole animals, generally in shell. If the shell is included, the inedible part is around 65%.</p> |
| Crustaceans Frozen | <p>Frozen raw or cooked whole animals or meat. If the shell of the whole animal is included, the inedible part is around 65%.</p> |

| Commodity | Definitions, coverage, remarks |
|--|--|
| Crustaceans Cured Examples are: dried shrimps, salted shrimps. | Whole or peeled, salted, semi-dried, dried or dehydrated, brined, pickled (all edible if shells are removed). |
| Crustaceans Canned Examples are: canned king crabs, vacuum-packed shrimp tails. | Meat canned in brine, oil or other medium (all edible). |
| Crustaceans Preparations not elsewhere specified Examples are: fermented shrimp paste (blachan), paste of ground and sun-dried small crustaceans; krupuk (shrimp crackers). | Fresh or frozen meat of animals, cooked (all edible). It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, spreads. Shrimp crackers are obtained with the addition of flours. |
| Molluscs Excluding Cephalopods Fresh Abalone, arkshell, clam, cockle, conch, freshwater and marine molluscs, mussel, oyster, pecten, scallop, sea snails, whelk, winkle, etc. | Raw whole animals, including the weight of shell. The inedible part is 50–80%. |
| Molluscs Frozen Examples are: adductors of scallops, shelled mussels and clams. | Frozen raw or cooked whole animals in shell or shucked meat. If the shell of the whole animal is included, the inedible part is 50–80%. |
| Molluscs Cured Examples are: smoked oysters, dried clams, dried scallops. | Salted, dried, smoked meat (all edible). |
| Molluscs Canned Examples are: vacuum-packed or jarred shelled mussels, clams and oysters; oyster and clam chowder and juice. | Meat canned in brine, oil or other medium (all edible) treated at temperatures adequate to ensure sterilization. |
| Cephalopods Fresh Cuttlefish, octopus, squid, etc. | Raw whole animals or meat. The inedible part of the whole animal is 20–40% (the highest rate applies to cuttlefish from which bone is removed). |
| Cephalopods Frozen | Frozen raw or cooked whole gutted and peeled animals or meat. The inedible part of the whole animal is 20–40% (the highest rate applies to cuttlefish from which bone is removed). |
| Cephalopods Cured Examples are: hard-dry-salted squid, pickled squid and cuttlefish. | Salted, dried (often sun-dried after gutting), smoked meat (all edible). |
| Cephalopods Canned Examples are: vacuum-packed small octopus, canned squid in own ink or oil. | Raw or precooked meat from gutted or ungutted animals, canned in brine, oil or other medium (all edible) treated at temperatures adequate to ensure sterilization. |
| Cephalopods Preparations Examples are: antipasto, salads, semi-preserved, value-added products. | Frozen and battered rings of squids and cuttlefish; semi-preserved, boiled, pickled and marinated; portions for salads and anipasto, mixed also with other species and ingredients (all edible). |
| Aquatic Animals not elsewhere specified Fresh Frog, horseshoe crab, jellyfish, sea cucumber, sea-squirt, sea-urchin, tunicates, turtle and other amphibians, arachnoids, echinoderms and miscellaneous invertebrates, etc. | Raw edible parts, fillets, meat, eggs. The inedible part is very significant. |
| Aquatic Animals nes Cured | Salted, dried meat (all edible); bêche de mer (eviscerated and steam-cooked or boiled holoturians, dried before consumption) |
| Aquatic Animals Preparations not elsewhere specified Examples are: urchin roes, shredded jellyfish, frog legs, turtle soups. | Fresh or frozen whole animals or meat, then cooked. If the shell or skin of the whole animal is included, the inedible part is significant. It also includes the species added as part of a multi-ingredient food (all edible), e.g. salad, paste, sausage, sauce, spreads, soups. |

Note: remarks concerning the product presentation and the edible part of fishery commodities are provided as an indication of the weight/nutritional losses between live-weight equivalent and product/edible weight. Food composition factors for main species groups in Appendix 1 are based on the nutritional content of the edible portion of individual commodities.
