# Statistical tables and charts

## List of tables

1.1	UK summary table	<i>page</i> <a href="#">3</a>
2.1	UK fishing vessels by their department of administration	<a href="#">7</a>
2.2	Main activity of the UK fishing fleet, by segment	<a href="#">8</a>
2.3	UK over 10m fleet by licensing district 1994-1996	<a href="#">9</a>
2.4	UK fishing vessels (over 10m) by vessel length groups	<a href="#">10</a>
2.5	Age of UK vessels (over 10m)	<a href="#">13</a>
2.6	Producer Organisations membership for 1996 and 1997	<a href="#">17</a>
2.7	Number of fishermen	<a href="#">18</a>
2.8	Number of fishermen by district	<a href="#">19</a>
3.1	Fish landings by the UK fleet	<a href="#">27</a>
3.2	Fish landings in the UK	<a href="#">29</a>
3.3	Fish landings in the UK and abroad	<a href="#">30</a>
3.4	Landings in 1996 at major ports and districts	<a href="#">38</a>
3.5	Major Ports in 1996	<a href="#">47</a>
3.6	Landings by foreign fishing vessels in 1996	<a href="#">51</a>
3.7	Landings abroad by UK fishing vessels in 1996	<a href="#">54</a>
3.8	Landings by area of capture	<a href="#">57</a>
4.1	Balance sheet for the UK	<a href="#">67</a>
4.2	Imports of fish and fish preparations	<a href="#">71</a>
4.3	Exports of fish and fish preparations	<a href="#">74</a>
4.4	Imports by exporting country	<a href="#">77</a>
4.5	Exports by country of consignment	<a href="#">83</a>
4.6	Imports of fish products	<a href="#">89</a>
4.7	Exports of fish products	<a href="#">91</a>
4.8	Consumption in the GB	<a href="#">93</a>
4.9	Consumption in the GB (historical data)	<a href="#">94</a>
4.10	Average annual prices of fish	<a href="#">95</a>
4.11	Quantity and average prices of selected species (landed weight)	<a href="#">96</a>
5.1	Main stocks and their status	<a href="#">100</a>

6.1	World catch figures by nationality of vessels	<a href="#">106</a>
6.2	World catch by species group	<a href="#">109</a>
6.3	World catch by sea area	<a href="#">110</a>
6.4	Marine catch by the principle countries fishing in non-adjacent fishing areas	<a href="#">111</a>
6.5	1996 Total Allowable Catches, quotas and uptake	<a href="#">118</a>
6.6	European Union fishing fleet as at 31 December 1996	<a href="#">144</a>
A2.1	Total number of vessels, registered tonnage & power for the the UK, by Segment	<a href="#">150</a>
A2.2	Total GRT & power for the UK, by Segment with vessels in the non-active fleet reallocated	<a href="#">152</a>
A3.1	Fish landings into the UK by UK vessels, 1987-1996	<a href="#">155</a>
A3.2	Number and tonnage of fishing vessels in the UK, 1987-1996	<a href="#">156</a>
A3.3	Number of fishermen in the UK, 1987-1996	<a href="#">157</a>
A3.4	Imports and exports of fish and fish preparations, 1987-1996	<a href="#">158</a>

## List of charts

2.1 Main ports (England and Wales) and landing districts (Scotland)	<i>page 6</i>
3.1 Quantity and value of landings by the UK fleet, including the Islands, by department of administration, 1992 - 1996	<a href="#">21</a>
3.2 Landings by UK vessels into the UK	<a href="#">21</a>
3.3 Quantity of demersal landings in the UK by UK vessels	<a href="#">22</a>
3.4 Percentage of cod and haddock landed by the UK fleet, by sea area of capture in 1996	<a href="#">22</a>
3.5 Percentage of herring and mackerel landed by the UK fleet, by sea area of capture in 1996	<a href="#">23</a>
3.6 Percentage of crab and nephrops landed by the UK fleet, by sea area of capture in 1996	<a href="#">24</a>
3.7 ICES fishing areas around the UK coastline	<a href="#">26</a>
4.1 International trade of fish	<a href="#">62</a>
4.2 Quantity of fish available for domestic use in the UK	<a href="#">63</a>
4.3 Quantity of demersal and pelagic fish and fish preparations imported into the UK and exported from the UK in 1996	<a href="#">64</a>
4.4 Average annual price of fish	<a href="#">66</a>
6.1 World marine catch in 1995 by nationality group	<a href="#">102</a>
6.2 World marine catch by ocean, 1970 - 1995	<a href="#">103</a>
6.3 Catch caught in non-adjacent fishing areas as a percentage of the total catch. (1993-1995)	<a href="#">104</a>
6.4 Major FAO fishing areas	<a href="#">105</a>
6.5 10m and over fleet of the European Union, by nationality of vessel, as at 31 December 1996	<a href="#">143</a>
A3.1 Quantity of fish available for domestic use in the UK 1987-1996	<a href="#">153</a>
A3.2 UK landings into the UK compared to the number of fishermen	<a href="#">154</a>
A3.3 Quantity and Value of UK landings into the UK	<a href="#">154</a>

## Preface

The UK Sea Fisheries Statistics are intended to provide a broad picture of the United Kingdom fishing industry and its operations. A note on the methodology used in this publication appeared in the publication covering 1993. Please contact the address below for further copies.

A new element this year is [Appendix 2](#), which shows the development of the UK fishing fleet from 1991 to 1996.

We recommend that you refer to the explanatory notes and glossary of terms which are important in interpreting some of the data.

We hope that you will find this publication helpful as a source of information and data about the UK fishing industry. Other useful official publications on sea fisheries statistics are:-

- Scottish Sea Fisheries Statistical Tables;
- The English, Welsh and Northern Irish Fishing Vessel List as at 30 June 1997;
- The Scottish Fishing Fleet at December 1996;
- The Monthly Return for England and Wales;
- Statistics of Fish Landings in England, Wales and Northern Ireland by Port;
- FAO Yearbook: Fishery Statistics - Catches and Landings 1995; and
- FAO Yearbook: Fishery Statistics - Commodities 1995

If you have any comments on this publication or would like more detailed information, please write to:

## Explanatory notes

1. The tables refer, as far as possible, to the United Kingdom, including the Isle of Man and the Channel Islands, with separate figures for England and Wales, Scotland and Northern Ireland. In some cases figures for the various parts of the United Kingdom are not strictly comparable and differences are explained in the headings and footnotes of the tables.
2. The figures in the tables in [Chapter 3](#) and [4](#) for catches and landings are given in terms of liveweight. However, [Table 4.11](#) is given in terms of the actual landed weight. Data in [Table A3.1](#) are given in terms of equivalent landed weight i.e. head on, gutted for most demersal species.
3. Landings by foreign vessels into the UK include landings by fishing vessels and carriers (if first point of sale of fish). Total imports which combine landings by fishing vessels, carriers and cargo vessels are shown in [Tables 4.2](#), [4.4](#) and [4.6](#).
4. Mackerel and herring landing figures for 1978 onwards include a quantity caught by British vessels but not actually landing at British ports. These quantities are transhipped to foreign vessels in coastal waters and are later recorded as exports.
5. The following symbols apply throughout:

-	means "nil"
..	means "negligible" (less than half the last digit shown)
nd	means "no data available"
na	means "not applicable"
6. Difficulties in collecting complete statistics on shellfish landings mean that available figures may significantly underestimate the total landings in some instances. The figures are however thought to be broadly indicative of trends.

# 1 Overview of the UK fishing industry

## The UK Fishing Industry

The UK has a major interest in sea fisheries reflecting its geographical position in the North East Atlantic. The fishing industry in the UK has some 8100 fishing vessels, with a further 600 vessels registered in the Channel Islands and the Isle of Man. In 1996, the UK fleet caught 892 thousand tonnes of sea fish with a total value of £637 million which was landed both into the UK and abroad. There were 19 thousand fishermen involved in sea fishing in the UK and many more people involved in the industries which support sea fishing and process and distribute its landings.

Some 711 thousand tonnes of sea fish were landed into the UK by both the UK fleet and foreign fishing vessels with a total value of £544 million. Another major source of supply is the import into the UK in bulk of fish caught by other countries. There is a substantial fish processing industry of around 700 businesses which employ some 19 thousand people. At the retail level, there are three thousand fishmongers employing seven thousand people. An increasing proportion of all fish (65 percent) is sold through supermarkets. Fish is also consumed in restaurants and in take away form from fish and chip shops. A small proportion of the catch is used to make fish oils and animal feeds. Some of the species caught by UK fishing vessels find a better market abroad and these species are usually exported or landed directly abroad. In 1996, UK vessels landed directly into non-UK ports 256 thousand tonnes of sea fish with a value of £146 million.

## Administration of the UK Fishing Industry

The UK Fisheries Departments comprise the Ministry of Agriculture, Fisheries and Food (MAFF), the Scottish Office Agriculture, Environment and Fisheries Department (SOAEFD), the Welsh Office Agriculture Department (WOAD), and the Department of Agriculture for Northern Ireland (DANI). Departments in the Isle of Man, Jersey and Guernsey are responsible for administering fishing activity in their respective areas.

## The Common Fisheries Policy

The primary aim of the Common Fisheries Policy (CFP) is to ensure rational and sustainable exploitation of fish stocks through conservation and management policies designed to protect resources and reflect the needs of the fishing industry. Structural policies are aimed at improving the balance between catching capacity and available resources by addressing fishing effort. Conservation policies are aimed at regulating the quantities of fish caught, through a system of Total Allowable Catches (TACs) based on scientific advice. These TACs are allocated as quotas to

Member States in accordance with fixed keys based on historic fishing rights. They are complemented by a series of technical conservation measures intended to achieve more selective fishing, for example by setting rules on minimum landing sizes, minimum mesh sizes and gear design, as well as defining areas of seasonal closures, methods of fishing and target species. Opportunities to fish in third country waters are also secured through the CFP.

### **Producer organisations**

Producer Organisations (POs) are established under the CFP to enable groups of fishermen to market the fish they catch. In 1985 POs were given the opportunity to manage allocations of some whitefish stocks subject to TAC restrictions in the North Sea (Area IV) and West of Scotland (Area VI). In 1991 this opportunity was extended to TAC whitefish stocks in the English Channel and Western waters (Area VII). In 1995, POs opting for quota management responsibilities were obliged to manage allocations of all Area IV, VI and VII whitefish stocks. Allowing POs to take on this management responsibility enables them to plan their uptake of their particular allocations to optimise the benefit to their members. In 1996 there were 19 PO's in the UK.

### **Sea Fisheries Committees**

There are twelve Sea Fisheries Committees (SFCs) which regulate local sea fisheries around virtually the entire coast of England and Wales out to 6 miles. SFCs were established in the last century and are empowered to make bye-laws for the management and conservation of their districts' fisheries. In 1995 their powers were widened to include the control of fisheries in their districts for environmental reasons.

### **Statistics for Managing Fisheries**

Prior to 1984, all UK catch statistics were provided to the Fisheries Departments on a voluntary basis. Since that year the regulations of the CFP have required those UK vessels which account for most of the fish caught to provide to the Sea Fisheries Inspectorates of the respective Fisheries Departments, located at the main ports, information on each trip including the main species caught, the area of capture, and the quantities landed. Additional information is collected to complete, as far as possible, the coverage of fishery activity. The combined data provide the main source of catch and landings statistics for UK vessels as recorded in the tables in this publication. (For further information regarding the statistical methodology see Appendix 2 of the 1993 publication).

The catch and landings statistics provide a system for monitoring the uptake of the UK share of stocks for which annual TACs are set. In any year once the quota has been taken the fishery is closed. Only 46 out of 172 species for which catches are recorded are subject to TACs.

Information on the fishing fleet is obtained from the Department of Transport's Register of Shipping and Seamen supplemented by information available to Fisheries Departments.

**TABLE 1.1 UK Fishing Industry: Summary Table**

£ million (unless otherwise specified)											
	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996

(xiii) Landed Price Index (g)											
	100.0	96.8	104.2	125.2	127.8	119.5	114.7	118.9	116.0	123.3	
(xiv) Retail Price Index (h)											
	102.1	104.2	106.8	118.1	126.1	126.9	125.4	122.8	123.1	123.1	

- (a) GDP for fishing includes landings abroad from 1990 onwards.
- (b) The volume index has been calculated at factor cost
- (c) Year-on-year comparisons may be affected by changes in the industrial classification of some contributors. For most businesses data are appropriate to a single activity heading; where information covers a mixture of activities, the business is classified according to the main activity.
- (d) Prior to 1990 the number of vessels refers to those that were known to be active; after 1990 the number of vessels refers to the registered fleet. The number of vessels excludes those registered in the Channel Islands and Isle of Man. Vessel data for 1990 and subsequent years are under review.
- (e) The quantity of landed fish is expressed in terms of liveweight. The figures for the years 1983 - 1987 relate to landings into the United Kingdom only; whereas those for 1988 onwards relate to landings both into the UK and abroad.
- (f) Imports are valued at cost, including insurance and freight terms whereas exports are valued at free on board terms.
- (g) The landed price index has been calculated on an annual basis with 1987 = 100
- (h) The fish component of the RPI which includes canned and processed fish. The Index is calculated on a monthly basis with January 1987 = 100

## 2 The structure of the UK fishing industry

### Introduction

Statistics on the UK fishing fleet since 1990 have been based on the fleet of fishing vessels as registered with the Department of Transport's Register of Shipping and Seamen. Information provided by the Register includes the length (overall and registered), breadth, gross registered tonnage, power, age and material of construction. Information on the fishing fleets of the Isle of Man, Guernsey and Jersey are supplied by the respective registering authorities. Prior to 1990, the statistics were based on fishing vessels known by Departments to be active.

Statistics on the size of the UK fishing fleet are complicated by the fact that the European Union is progressively altering the methodology used to determine vessel tonnage for the fishing fleet from various national and international standards, previously collectively called GRT, to a common standard based on the International Tonnage Convention 1969 and known as GT. A phased programme of conversion has been introduced and is not due to be completed until 2003.

Whilst vessel tonnage is a volumetric measure, there is no simple mathematical relationship between GRT and GT. For any given vessel, a GT figure can only be obtained by physical measurement or, in the case of smaller vessels, by the application of formulae designed to give an approximation. GT figures are often higher than GRT figures for the same vessel, the range of outcomes can be as low as 50% or as high as 300% of the original tonnage according to the individual vessel characteristics; for large vessels, GT is almost always higher than GRT.

Licensing of vessels first applied in 1977 and covered only fishing vessels over 40 feet (12.14 metres) in certain fisheries. Following the adoption of the European Union's Common Fisheries Policy the UK designated a number of fish stocks as pressure stocks and introduced a restrictive licensing scheme for vessels fishing those stocks. The licensing regime initially only covered vessels over 10 metres *registered* length, but its coverage has been progressively extended over the years. In February 1990 the licensing regime was extended to vessels of over 10 metres *overall* length fishing for TAC stocks. Later the same year restrictive licensing was extended to cover *all fishing* by vessels over 10 metres overall length with the exception of those fishing for salmon and migratory trout which were covered by a separate regime. From May 1993 licensing was extended to vessels of 10 metres *overall length and under*.

For administrative and statistical purposes a fishing vessel is attributed to the port and the corresponding Department which issues its licence. In [Tables 2.4](#) and [2.5](#), 36 vessels were unattributed to any Department; these include vessels which are currently registered but which do not presently hold a licence.

**Fleet structure and  
Multi-Annual  
Guidance Programmes**

Under the Multi-Annual Guidance Programmes of the CFP, each Member State's fleet is subdivided into segments. Capacity reduction targets are set for each of these segments and these are tailored to the particular circumstances of each Member State's fleet. In the UK, these segments are currently based on the recorded activity of fishing vessels, with each vessel attributed to a segment on the basis of fishing activity it undertakes most often used.

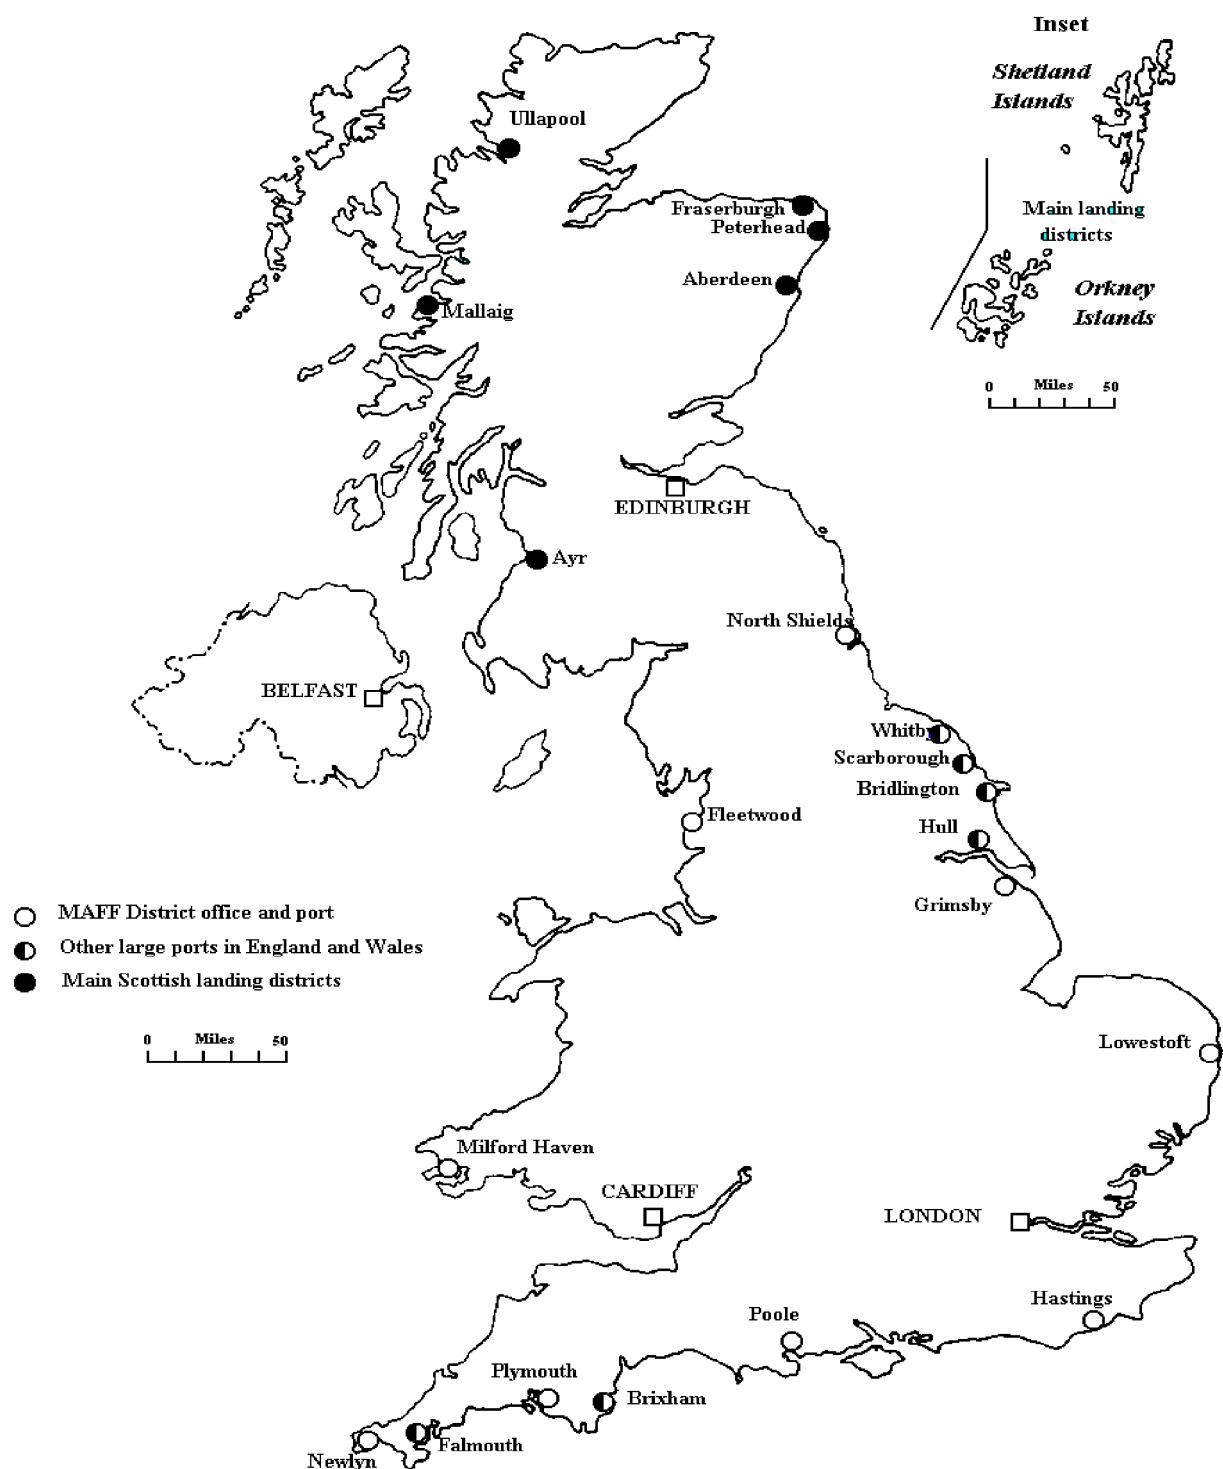

The present programme for decommissioning fishing vessels from the fishing fleet began in 1993. £53 million has been made available for this and the programme has run for 5 years. The first three tranches of decommissioning removed 6½ percent of capacity at a cost of £26.2 million. The fourth tranche removed a further 1.6 percent of capacity at a cost of £10.2 million. £12 million is available for 1997/98.

[Table 2.2](#) gives details of the number of vessels, tonnage and power of the UK fleet in total and by segment at end-1996.

**Number of Fishermen**

Statistics on the number of fishermen are drawn from surveys carried out by the Sea Fisheries Inspectorates in England, Wales and Northern Ireland and by the Sea Fisheries Protection Agency in Scotland. Overall, the number of fishermen was lower in 1996, with the numbers of regular fishermen declining by more than those of part timers.

**Chart 2.1 Main Ports (England and Wales) and Landing Districts (Scotland)**

**TABLE 2.1 UK Fishing Vessels by Department of Administration**

Numbers and Tonnage as at 31 December of each year (a)

	1990	1991	1992	1993	1994	1995	1996
<b>United Kingdom (excluding Islands)</b>							
Number of vessels (b)	11,189	10,862	10,979	11,108	10,297	9,174	8,073
Registered tonnage (c)	206,587	209,857	211,920	213,667	205,665	206,591	205,794
GRT	nd	204,476	204,751	204,111	193,348	188,617	181,541
Of which:-							
Over 10m vessels							
England, Wales and Northern Ireland (d)							
Number of vessels	2,534	2,460	2,334	2,128	1,867	1,660	1,323
Registered Tonnage	112,066	111,026	109,852	104,887	99,593	100,729	92,149
Scotland							
Number of vessels	1,291	1,281	1,269	1,314	1,236	1,195	1,144
Registered Tonnage	70,894	75,595	77,446	83,417	82,140	84,451	94,060
Under 10m vessels							
Number of vessels	7,364	7,121	7,376	7,666	7,195	6,320	5,606
Registered Tonnage	23,627	23,236	24,622	25,363	23,956	21,411	19,585
Channel Islands and Isle of Man							
Number of vessels	nd	549	582	584	530	546	594
GRT	nd	4,876	5,334	5,294	4,876	4,869	4,711

(a) The figures refer to vessels in the registered fleet for which the data are currently under review.

(b) Please note that these figures incorporate changes in the numbers of under 40 feet vessels which are due partly to the changes in the definitions used for this sector of the fleet.

(c) Since fishing vessels can be registered under various Shipping Acts, the registered tonnage figures are not strictly comparable.

(d) The figures for England, Wales and Northern Ireland include vessels not allocated to any department.

**TABLE 2.2 Main Activity of the UK Fishing Fleet, by Segment**

As at 31 December 1996

	United Kingdom (incl. Channel Islands and Isle of Man)							
	Number	Registered Tonnage		GRT	Power (kW)			
<b>1996 (Provisional)</b>								
Pelagic Gears	58	(1%)	37,184	(18%)	27,801	(15%)	71,876	(7%)

### **3 Catches and landings data**

#### **Summary**

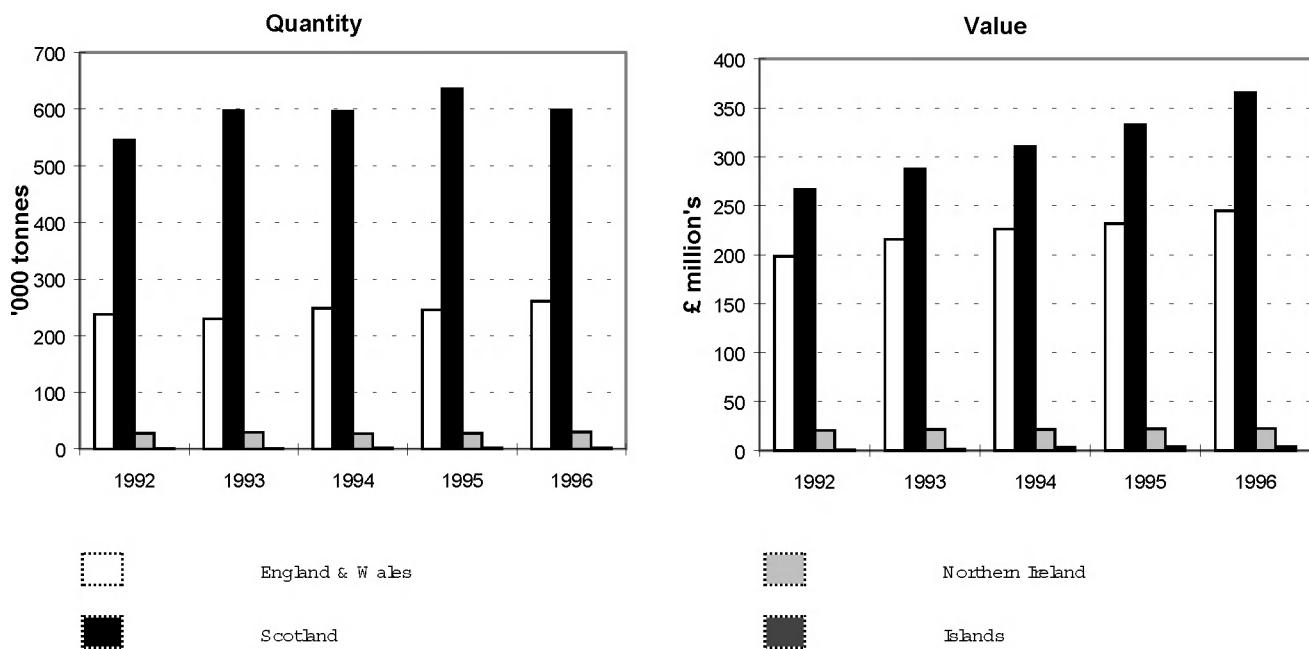

In 1996, the UK fleet, including Channel Island and Isle of Man vessels, landed in the UK and abroad 892 thousand tonnes of sea fish (including shellfish) with a value of £637 million. Compared with 1995 there was a small fall in quantity (2 percent), however value rose (8 per cent) from £590 million.

Demersal species represented 46 percent of the catch by weight in 1996 and 60 percent of the value of landings by the UK fleet. Pelagic landings have tended to fluctuate from year to year and, though representing 39 percent of total landings by weight, accounted for just 14 percent of the total value in 1996. Shellfish landings have been on an upwards trend since 1993, in 1996 accounting for 16 percent by weight and 26 percent by value of total landings by the UK fleet.

Just under three quarters of fish taken by the UK fleet was landed in the UK, the remainder being landed at ports abroad. The proportion of fish landed abroad was significantly higher in 1996 than 1995 (38 percent), and nearly treble that of 1989.

In terms of the Department of Administration, Scottish vessels accounted for 67 percent of the weight and 57 percent of the total value of landings by the UK fleet. Vessels administered in England and Wales accounted for 29 percent of the quantity and 38 percent of the value of the total, whilst Northern Ireland vessels represented 3 percent by quantity and 4 percent by value.

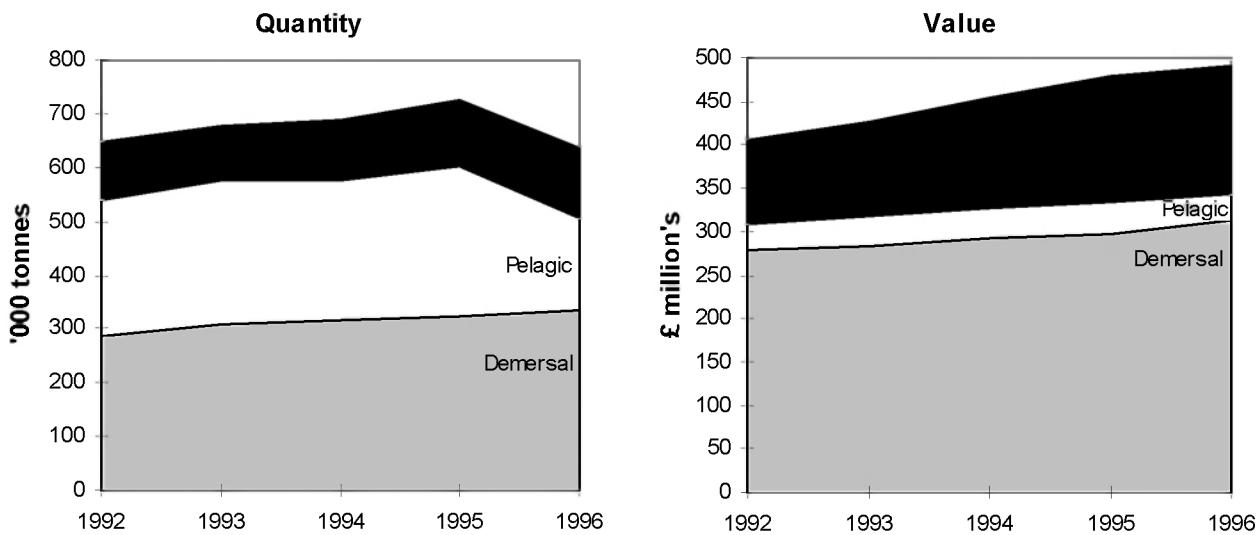

**Chart 3.1 Quantity and Value of Landings by the UK Fleet, including the Islands, by Department of Administration, 1992 - 1996.**

**UK landings into the UK**

The total quantity of all fish landed by UK vessels into the UK in 1996 fell (12 percent) from 726 in 1995 to 636 thousand tonnes in 1996. Though the value continued its increase since 1992, to £491 million in 1996, a rise of 21 percent.

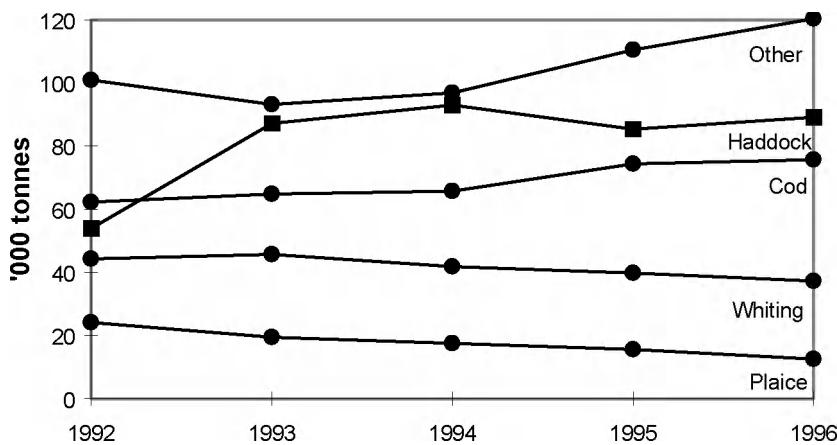

**Chart 3.2 Landings by UK vessels into the UK**

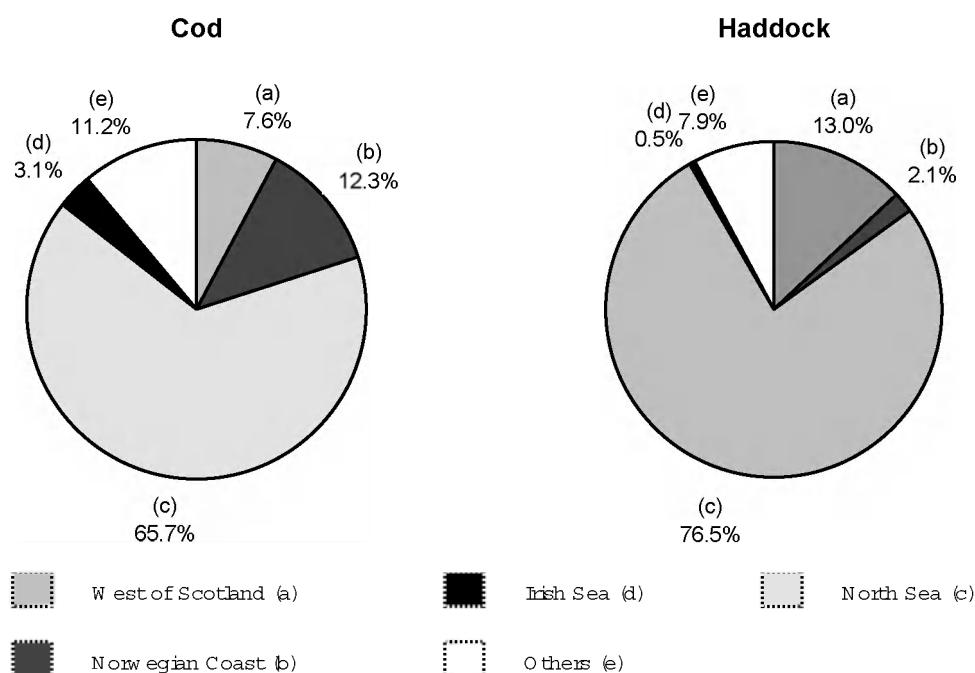

## *Demersal fish*

Cod, haddock, plaice and whiting account for most of the demersal species landed by UK vessels. As can be seen from Chart 3.3, since 1992 landings of cod have increased steadily, whereas plaice and whiting have decreased by 48 and 16 percent respectively. Since 1992, landings of haddock increased by 73 percent in 1994, had a decline of 8 percent then rose by 4 percent in 1996. Other species have been on an upward trend over the majority of the period 1992 to 1996. A more detailed species breakdown of demersal landings in the UK by both UK and foreign vessels and of landings abroad by the UK fleet can be found in [Table 3.3](#).

**Chart 3.3 Quantity of Demersal Landings in the UK by UK Vessels**

**Chart 3.4 Percentage of Cod and Haddock Landed by the UK Fleet, by Sea Area of Capture in 1996**

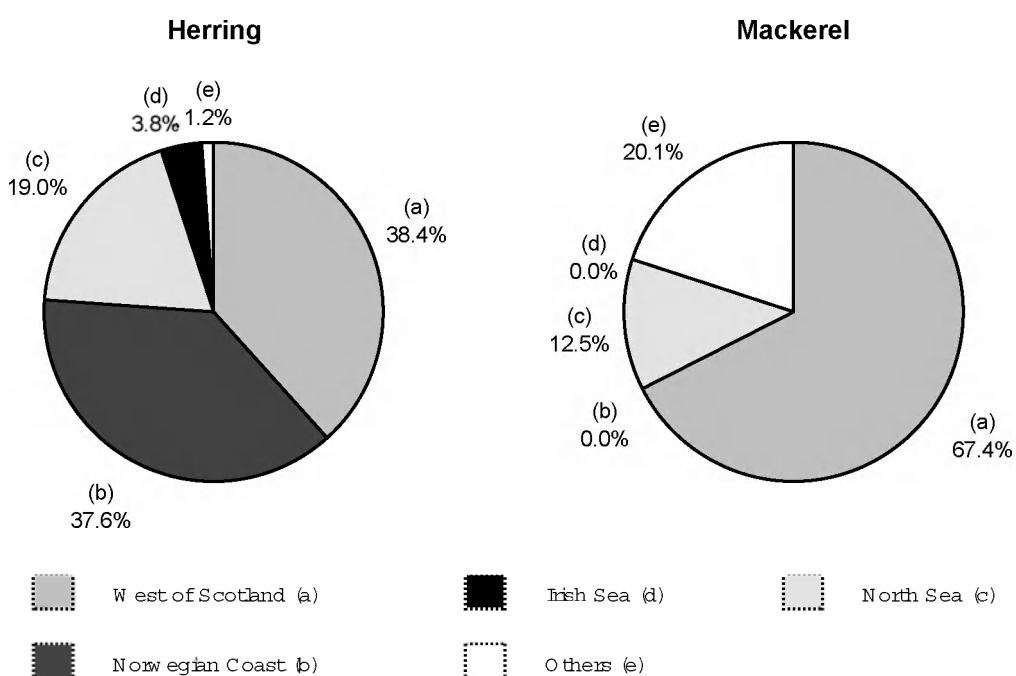

Of the 90 thousand tonnes of haddock landed by UK fleet in 1996, the largest proportion of 76 percent (69 thousand tonnes), were caught in the North Sea and 13 percent (12 thousand tonnes) were caught in the West of Scotland area.

Of the 80 thousand tonnes of cod landed by the UK fleet in 1996, the largest proportion of 66 percent (52 thousand tonnes) were caught in the North Sea (Area IV), 12 percent (10 thousand tonnes) were caught off the Norwegian Coast (Area IIa), and 8 percent (6 thousand tonnes) were caught in the West of Scotland area (Area VIa).

### Pelagic fish

Herring and mackerel are the two main pelagic species landed by UK vessels, accounting for 79 percent of the total pelagic landings. Landings of herring by the UK fleet rose in 1993 to 106 thousand tonnes, decreased slightly (2 percent) in 1994 then rose to 123 thousand tonnes (18 percent) in 1996. The quantity of mackerel rose in 1993 to 258 thousand tonnes, then decreased to 148 thousand tonnes in 1996, a fall of 42 percent. The same two species are also the most important in terms of value, annual landings of mackerel were valued at about £59 million, and herring at £17 million. A more detailed species breakdown of pelagic landings in the UK by both UK and foreign vessels and of landings abroad by the UK fleet can be found in [Table 3.3](#).

**Chart 3.5 Percentage of Herring and Mackerel Landed by the UK Fleet, by Sea Area of Capture in 1996**

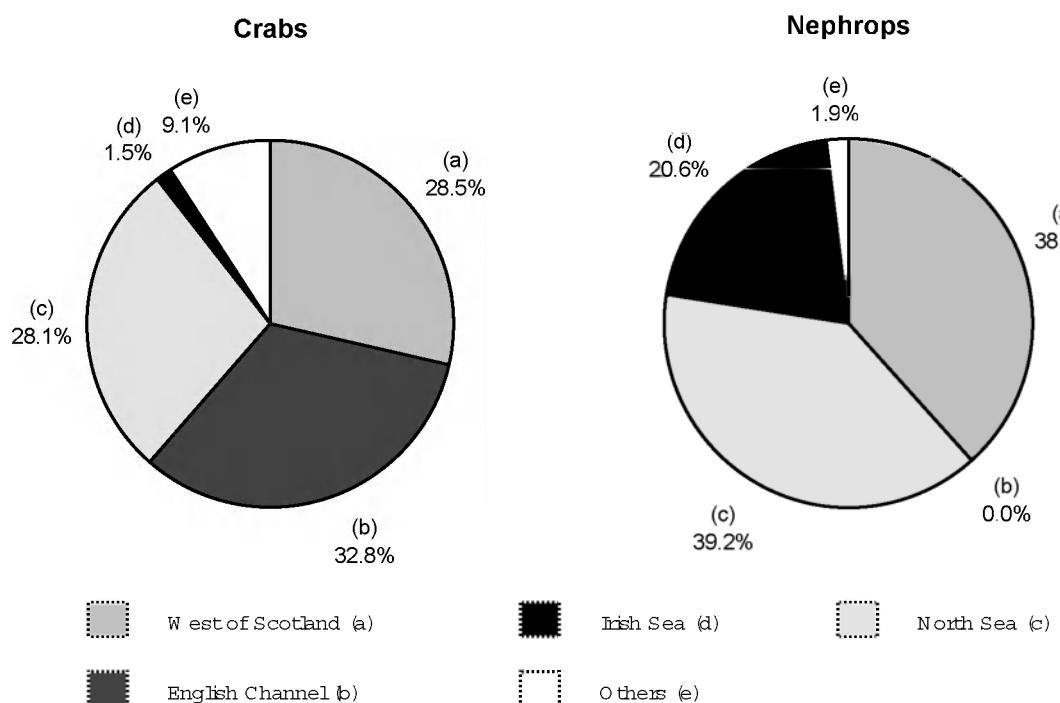

Of the 123 thousand tonnes of herring landed by the UK fleet in 1996, the largest proportion of 38 percent were caught in both the Norwegian (Area IIa) (46 thousand tonnes) and West of Scotland (Area VIa) (47 thousand tonnes) areas. A further 19 percent (23 thousand tonnes) were caught in the North Sea (Area IV).

Of the 148 thousand tonnes of mackerel landed by UK fleet in 1996, the largest proportion of 67 percent (100 thousand tonnes) were caught in the West of Scotland area (Area VIa) and 13 percent (19 thousand tonnes) in the North Sea.

## Shellfish

The two species of shellfish which account for the majority of shellfish landings by the UK fleet are crabs (16 percent) and Nephrops (21 percent). Landings of crabs and Nephrops have remained relatively stable at 23 and 30 thousand tonnes respectively. Scallops are also an important species in terms of value, accounting for 17 percent of the total shellfish value. A more detailed species breakdown of shellfish landings in the UK by both UK and foreign vessels and of landings abroad by the UK fleet can be found in [Table 3.3](#).

**Chart 3.6 Percentage of Crab and Nephrop Landings by the UK fleet, by Sea Area of Capture in 1996**

Of the 23 thousand tonnes of crab landed by the UK fleet in 1996, the largest proportion of 33 percent (8 thousand tonnes) were caught in the English Channel (Area VII<sup>d,e</sup>), 29 percent (7 thousand tonnes) were caught in the West of Scotland area (Area VI<sup>a</sup>) and a further 28 percent (6 thousand tonnes) were caught in the North Sea (Area IV).

Of the 30 thousand tonnes of Nephrops landed by UK fleet in 1996, the largest proportion of 39 percent (12 thousand tonnes) were caught in the North Sea (Area IV), 38 percent (11 thousand tonnes) in the West of Scotland area and 21 percent (6 thousand tonnes) were caught in Irish Sea (Area VII<sup>a</sup>).

## 4 Supplies, Overseas Trade and Marketing

### Introduction

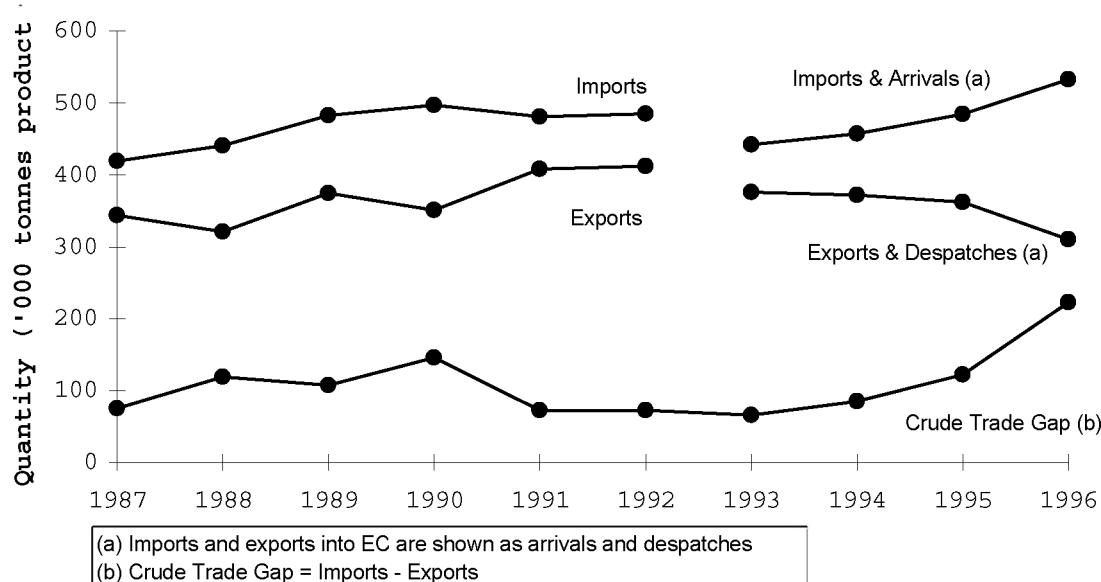

This chapter brings together information on fish available for consumption, imports, exports, prices and household consumption. The landings data are given in terms of equivalent live weight except for [Table 4.11](#) which summarises quantities marketed in landed weight. The trade data are shown in terms of actual product weights.

### Partial Balance Sheet for the UK

A partial balance sheet for the UK ([Table 4.1](#)) has been constructed and included in the Sea Fisheries Statistics publication again this year. Separate tables are given for demersal, pelagic and shellfish, and within these groupings, for particular species.

In aggregate terms, the UK has been a net importer of fish throughout the period 1987 - 1996.

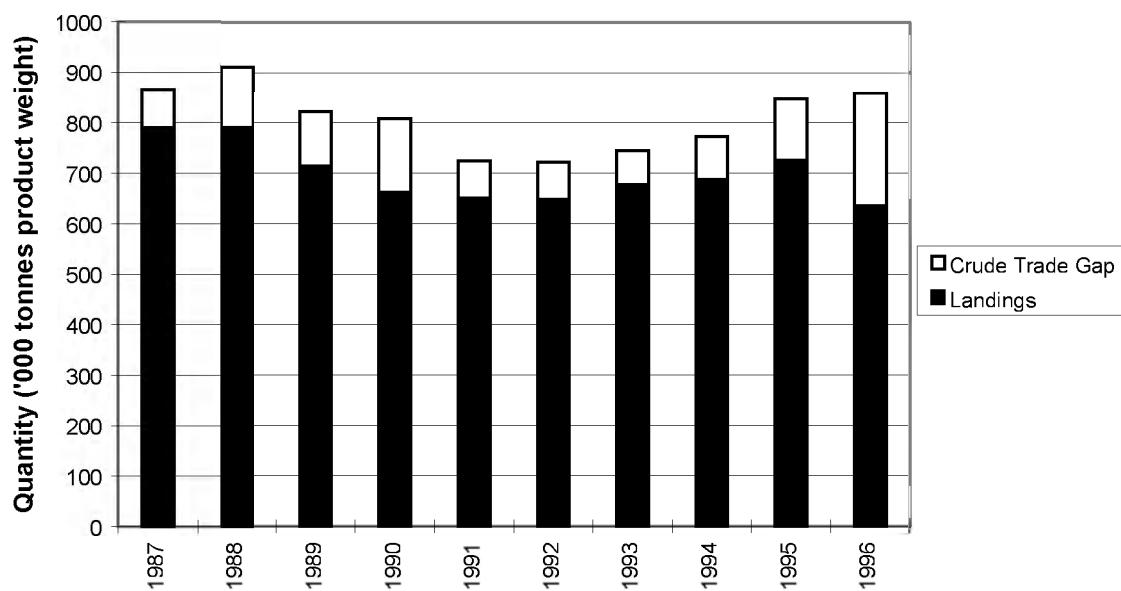

**Chart 4.1 International Trade of Fish**

Landings by UK vessels into the UK varied during the last ten years between a low of 636 thousand tonnes in 1996 and a peak of 791 thousand tonnes in 1988. More detailed landing data can be found in Chapter 3. Adding the crude trade gap and taking into account stock changes gives a figure for the total available for domestic (UK) use. This quantity has varied around a slightly decreasing trend during the period 1985 to 1994, but has shown an increase in 1995 and 1996.

Most imports of white fish are used by the food industries to produce a variety of fish products for consumption in the home and through the catering industry.

### Chart 4.2 Quantity of Fish Available for Domestic Use in the UK

Some 400 thousand tonnes of fish products are manufactured in the UK every year, some 50 thousand tonnes being made into fishmeals, solubles etc. for use as animal feeds.

Approximately 430 thousand tonnes of fish are consumed in the home every year. This includes fried fish bought at the traditional fish and chip shops and taken away to eat. "Other uses" includes human consumption outside the home, e.g. in restaurants.

#### Imports

The data on imports for 1995 and 1996 are provisional and appear still to be incomplete by an unknown margin.

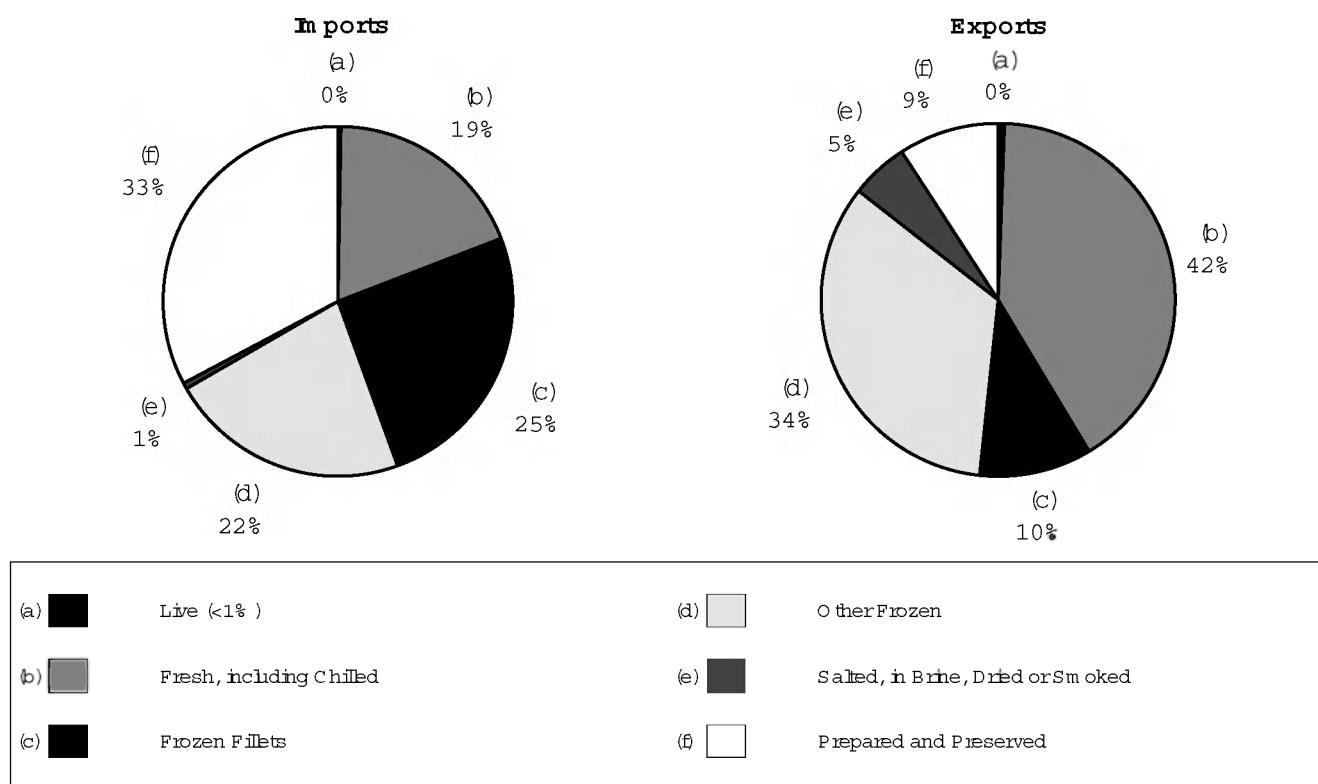

Total imports of fish and fish preparations rose in 1996 by 10 percent to 533 thousand tonnes product weight. In terms of value, total imports rose in 1996 by 8 percent to £1,213 million. As explained above, these figures are provisional; and may underestimate the amounts actually traded.

Demersal and pelagic fish and fish products account for approximately 86 percent of total imports by weight and approximately 72 percent of total imports by value in 1996. Prepared and preserved fish accounted for 33 percent of total demersal and pelagic fish and fish products imported into the UK by weight in 1996; frozen fillets for 25 percent; other frozen products for 22 percent and fresh, including chilled, for 19 percent. A more detailed breakdown of both quantity and value of imports can be found at [Table 4.2](#).

In 1996 the UK imported 150 thousand tonnes of prepared and preserved demersal and pelagic fish. Of this total, 90 thousand tonnes were tuna and bonito, plus a further 32 thousand tonnes of salmon. 24 thousand tonnes of prepared and preserved demersal and pelagic fish were imported from Thailand and 21 thousand tonnes were imported from the U.S.A. Further information on the country of origin of UK imports can be found in [Table 4.4](#).

The UK imported 23 thousand tonnes of fresh and chilled cod, plus 18 thousand tonnes of fresh and chilled haddock in 1996. 52 thousand tonnes of frozen cod fillets were imported in 1995, plus 28 thousand tonnes of frozen cod.

### Chart 4.3 Quantity of Demersal and Pelagic Fish and Fish Preparations Imported into the UK and Exported from the UK in 1996

The main type of shellfish imported into the UK in 1996 were shrimps and prawns, of which 22 thousand tonnes were imported in the form of fresh, chilled, frozen or semi-preserved and 35 thousand tonnes were imported as preserved or prepared. In total the UK imported 8 thousand tonnes of shellfish and shellfish preparations from Denmark, 16 thousand tonnes from Iceland and 7 thousand tonnes from India in 1996.

#### Exports

The data on exports for 1995 and 1996 are provisional and appear to still be incomplete by an unknown margin.

Total exports of fish and fish preparations decreased by 14 percent in 1996 to 310 thousand tonnes product weight. In terms of value, total exports increased by 1 percent in 1996 to £700 million.

Demersal and pelagic fish and fish products accounted for approximately 76% of total exports by weight and approximately 63 percent of total exports by value. Fresh, including chilled fish accounted for 41 percent of total demersal and pelagic fish and fish products exported from the UK by weight in 1996; frozen fillets for 10 percent; other frozen products for 34 percent and prepared and preserved products for 9 percent. A more detailed breakdown of both quantity and value of exports can be found at [Table 4.3](#).

In 1996 the UK exported 96 thousand tonnes of fresh, including chilled demersal and pelagic fish. Of this total, 8 thousand tonnes were mackerel, 9 thousand tonnes herring, plus a further 24 thousand tonnes of salmon. Three thousand tonnes of fresh, chilled and frozen demersal and pelagic fish were exported to Russia, 62 thousand tonnes to France, 15 thousand tonnes to the Netherlands and 14 thousand tonnes to Spain. Further information on the country of consignment of UK exports can be found in [Table 4.5](#).

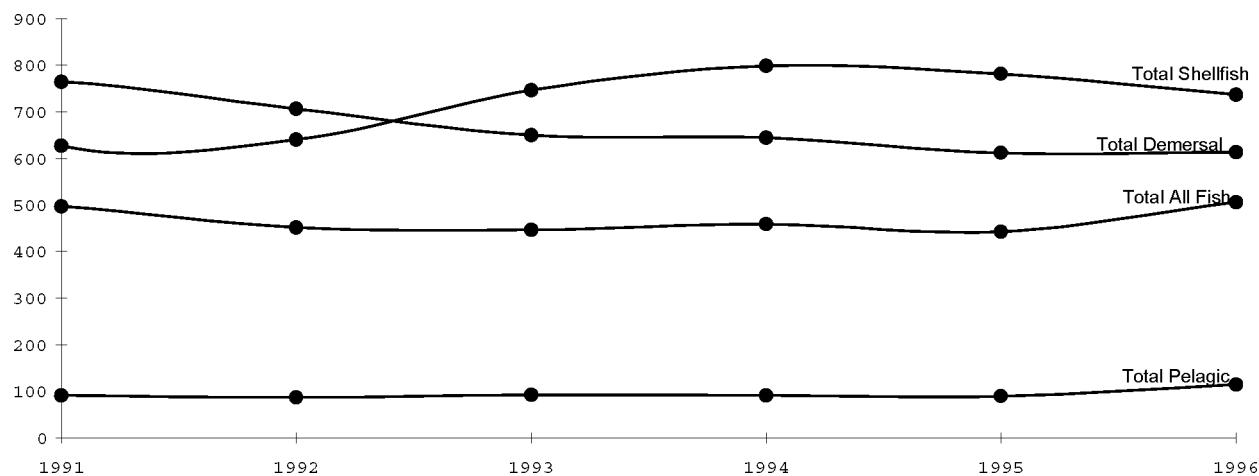

The UK exported 22 thousand tonnes of shellfish and shellfish preparations to France and 21 thousand tonnes to Spain in 1996.

## Prices

The average annual prices quoted in this publication are based on realisations for first-hand sales of fish to all outlets, i.e. for human consumption and also for other uses such as fish meal and animal feeding stuffs. These prices are calculated using the equivalent live weight.

In 1996 the average annual price of fish rose by 17 percent to £772 per tonne. The total demersal price rose slightly (3 percent) in 1996 to £936 per tonne; the price of pelagic fish rose by 32 per cent to £175 per tonne; and the total shellfish fell by 3 percent to £1,125 per tonne. A more detailed breakdown of these prices for individual species for selected years can be found at [Table 4.10](#).

**Chart 4.4 Average Real Annual Price of Fish (Realisations of First-Hand Sales to All Outlets)**

The graph above shows the average annual price of fish in real terms. The current prices shown in [Table 4.10](#) have been deflated using the All Items RPI (1987 = 100).

### **The Retail Price of Fish and the Retail Price Index**

The Retail Price Index (RPI) measures the rate of change in prices of the goods and services consumed by households. Fish and fish products are included in the representative basket of goods and services for which prices are collected to compile the Index. The representative items are changed to reflect changing consumer tastes. Currently fish is represented in the Index by fresh cod fillets, fresh rainbow trout, frozen plaice fillets, fish fingers, canned tuna, canned salmon and frozen cod (in sauce). The figures used in the UK Sea Fisheries Statistics are the Fish Components of the Index. Further information on the RPI is available in the RPI Business Monitor (MM23). Actual prices of a selection of representative items are also published monthly in the RPI Business Monitor.

- (a) Salmon and trout are excluded from the landings data.
- (b) Landings are given in terms of landed weight equivalent (i.e. head on, gutted for most species)
- (c) Landings include transhipments of mackerel (see explanatory note 2, page viii)
- (d) Data on both imports and exports are provisional in 1993 and 1994. They appear to be incomplete by an unknown margin.
- (e) The processing figures for 1992 and 1993 are estimates.
- (f) Includes fresh fish sold for consumption either directly to consumers or to the catering trade plus wastage
- (g) The fish component of the RPI. The Index is calculated on a monthly basis with January 1987 = 100.

- (a) Data on imports are provisional. They appear to be incomplete by an unknown margin
- (b) Fillets are expressed in terms of product weight
- (c) Includes pelagic fish other than herring, which are not separately identifiable
- (d) Large amounts of salmon and trout are imported as prepared and preserved fish (See Table 4.2.)

\* Average values throughout this table are based on realisations for first-hand sales of fish to all outlets, i.e. for human consumption and also for other uses such as fish meal and animal feeding stuffs.

(a) Data for the years 1938 to 1987 were originally calculated on a standard landed weight basis. These data have been converted to a liveweight basis for comparison purposes; however they should not be regarded as showing the accurate liveweight price but may be used to indicate trends

(b) Average values for the UK not available. Landings in Scotland of the species in the years indicated were included with "Other Demersal" or "Other Shellfish".

(c) Prior to 1972 landings of Scallops and Queens were not separately identifiable and were entered under one heading of Scallops.

## 5 Main Stocks and their Level of Exploitation

### UK quotas

Total Allowable Catches (TACs) are set each year by the Council of Ministers following scientific advice on the impact that various levels of fishing will have on the abundance of the stocks. These TACs are then allocated as quotas to member states under the principle of relative stability i.e. in accordance with fixed keys based on historic fishing rights.

The pressure on stocks and the need to reduce effort in 1996 led to a 10 percent reduction in the UK's overall level of fishing opportunities in EC waters compared with 1995. This reduction included an emergency in-year 50 percent cut in the TAC for North Sea herring following revised scientific advice.

The UK's fishing opportunities in distant waters remained substantially unchanged from 1995 levels.

### Main Stocks and

### their Level of Exploitation

The management of fisheries involves investigations by UK fishery scientists to assess the impact that fishing has on the stocks, the level of recruitment of juvenile fish and the implications for catch rates. This work is carried out in co-operation with other countries and leads to scientific advice on sustainable catch rates as given by the International Council for the Exploration of the Sea (ICES) Advisory Committee for Fisheries Management (ACFM). This section gives a brief summary of the position of a number of important stocks. It is based on "I.C.E.S. Co-operative Research Report, No. 221, Report of the I.C.E.S. Advisory Committee on Fishery Management 1996 Parts 1 and 2".

Definitions of the spawning stock biomass (SSB), year class and recruits can be found in the glossary of terms in [Appendix 1](#).

### North Sea

The main demersal stocks harvested for human consumption in the North Sea (cod, haddock, whiting, plaice and sole) were, according to the assessments carried out in 1996, subject to fishing mortality rates in recent years which were amongst the highest in their respective historical series.

The cod stock remained at a very low level in 1996 and, apart from in 1994, recruitment has been below the long-term average (1963-1995) for the last nine years. Its SSB in 1996 was two-thirds of the level of 150,000 tonnes which is considered by ACFM to be the biological level below which recruitment is reduced.

Very poor recruitment to the haddock stock in the late 1980s had resulted in its SSB falling to record low levels in 1990 - 1991. By 1996, however,

SSB had risen to around 230 thousand tonnes, well above the lowest desirable biological level, following the recruitment of four more-abundant year classes.

The whiting stock has been adversely affected by 7 consecutive years (1989 - 1995) of below-average recruitment, but fishing mortality has decreased considerably in recent years and its SSB has increased to over 300,000 tonnes.

The plaice stock was bolstered by above-average recruitment throughout the 1980s, but continuing high levels of exploitation and declining recruitment levels have resulted in its SSB falling below the lowest biological acceptable level of 300,000 tonnes.

Following the recruitment of the exceptionally abundant 1987 year class, the SSB of sole increased considerably in 1990 and, despite continuing high fishing mortality levels, the strong 1991 year class has kept it above the long-term average level during 1990 - 1996.

Following its recovery from near collapse in the mid 1970s, the SSB of North Sea herring has declined from a peak in 1989 and, by 1992, had fallen below the lowest desirable biological level of 800,000 tonnes. Fishing mortality on the adults has decreased in 1996 and four years of above-average recruitment since 1992 has stabilised the SSB at around 550,000 tonnes in 1994 - 1996.

#### *English Channel*

Recruitment to the sole stocks in the eastern and western English Channel has been generally above average since 1989, and their joint SSB in 1996 remains above the long-term average, at 13,000 tonnes. Though fishing mortality rates in the western Channel have declined in recent years, stocks are still being exploited at high levels relative to the historical series.

#### *Celtic Sea*

Exploitation of the stocks of the two monkfish species increased through the 1980's, but following reduced exploitation and good recruitment during 1990 - 1994, their joint SSB in 1996 of 90,000 tonnes indicates a recovery above the historic low of around 64,000 tonnes recorded in 1993.

#### *Irish Sea*

The very high fishing mortality on cod has declined considerably since 1992, but apart from the above-average 1991 year class, recruitment since 1988 has been below average. Although there has been a small recovery of the SSB in 1996, it remains well below its lowest desirable biological level.

Despite a succession of poor year classes since 1986, and a consequent decline in SSB from a peak in 1987, good recruitment in 1989 has resulted in the sole SSB stabilising around its historically lowest level of 3,500 tonnes, which is considered by ACFM to be close to the lowest desirable biological level.

#### *West of Scotland*

The assessments of demersal stocks in Sub-area VI (West of Scotland and Rockall) continued to be hampered by the poor quality of data upon which

the assessments are based. Though fishing mortality rates on some stocks have declined from the high levels in the late 1980's, and the SSBs in 1996 for all demersal stocks in Division VI have shown a recovery from the low levels recorded in 1991 - 1992, for cod, haddock and saithe the SSB in 1996 remains close to or below the lowest desirable biological level. Estimates of recruitment indicated several recent above-average year classes for cod, haddock and whiting.

*Western Mackerel*

The recruitment of several strong year classes up to 1989, and moderate fishing levels, enabled the SSB of mackerel which spawn to the west of the British Isles to increase steadily to over 3 million tonnes in 1991. Since then fishing mortality has increased rapidly, surveys have indicated that only the 1993 year class was above average, and the SSB has declined to around 2 million tonnes in 1996.

## 6 Overview of the World Fishing Industry

### World Catch

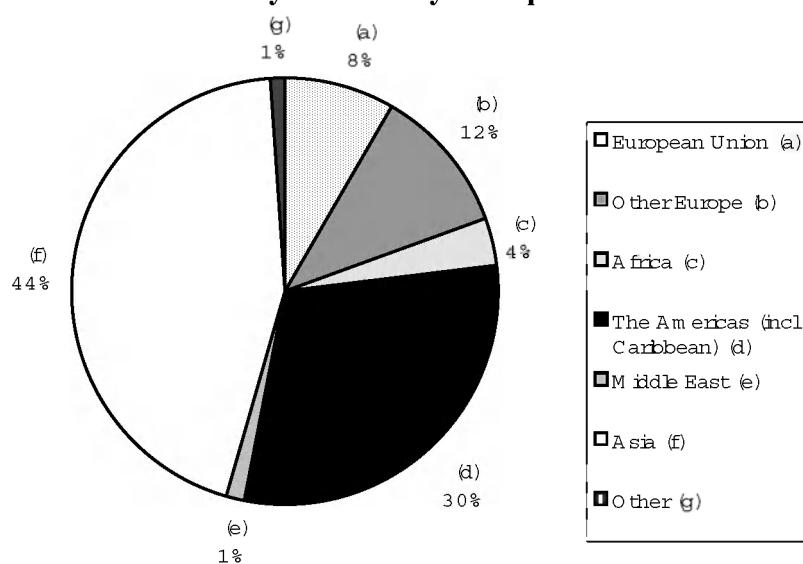

The world catch data ([Tables 6.1 - 6.4](#)) presented in this chapter have been extracted from the most recently available FAO publication “FAO Yearbook: Fishery Statistics - Catches and Landings 1995”. These tables present the annual statistics, for a five years ending in 1995, on a worldwide basis, on **nominal catches** (See Appendix 1, Glossary of terms).

During the period 1991 to 1995 the world catch figures from marine fishing areas grew from 83 million tonnes in 1991 to a peak of 92 million tonnes in 1995.

Asia accounted for the largest proportion of the world marine catch in 1995, at 44 percent (40.7 million tonnes). Central and South America for 23 percent (21 million tonnes); and the European Union for 8 percent (7.7 million tonnes).

In 1995 vessels from six nations accounted for half of the world marine catch. China caught 14.8 million tonnes (16%) of fish, Peru 8.9 million tonnes (10%), Chile 7.6 million tonnes (8%), Japan 6.6 million tonnes (7%), the USA 5.3 million tonnes (6%), and the Russian Federation 4.1 million tonnes (4%).

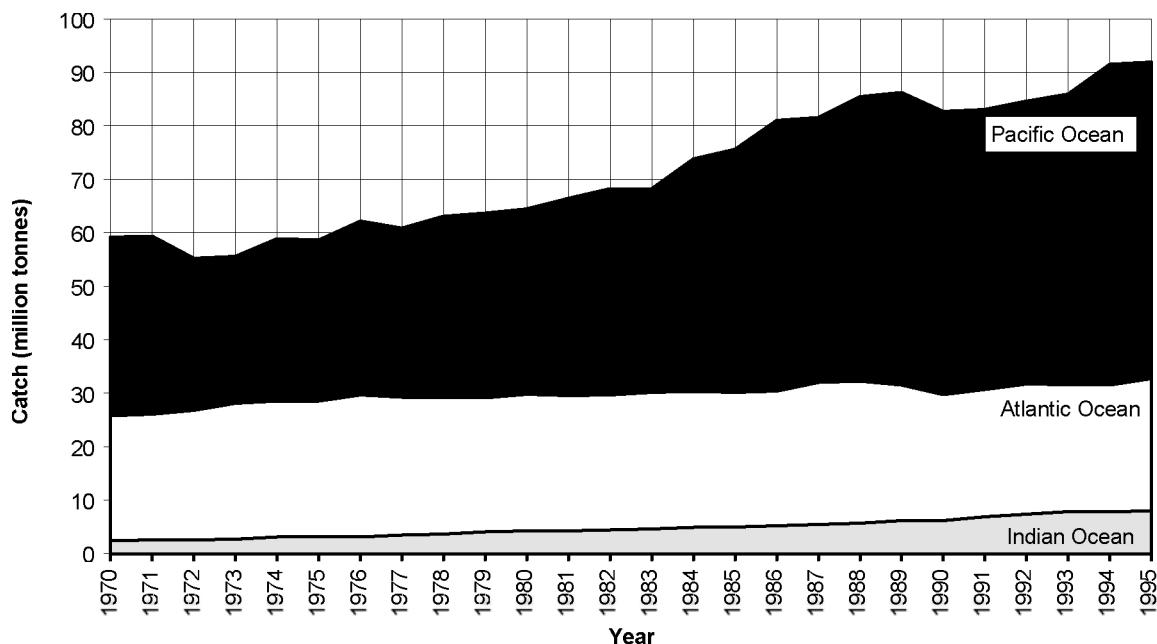

**Chart 6.1 World Marine Catch in 1995 by Nationality Group**

Of the 92 million tonnes caught in 1995, 64 percent of the world marine catch was from the Pacific Ocean; 27 percent from the Atlantic Ocean; and 9 percent from the Indian Ocean.

Marine catches from the Pacific Ocean, show a long-term gradual increase, rising 77 percent from 33 million tonnes in 1970 to 59 million tonnes in 1995. In the Atlantic ocean, marine catches have tended to fluctuate between a low of 23 million tonnes and a high of 27 million tonnes, during the period 1970 to 1995. In the Indian Ocean, marine catches have been gradually increasing, from 2 million tonnes in 1970 to 8 million tonnes in 1995.

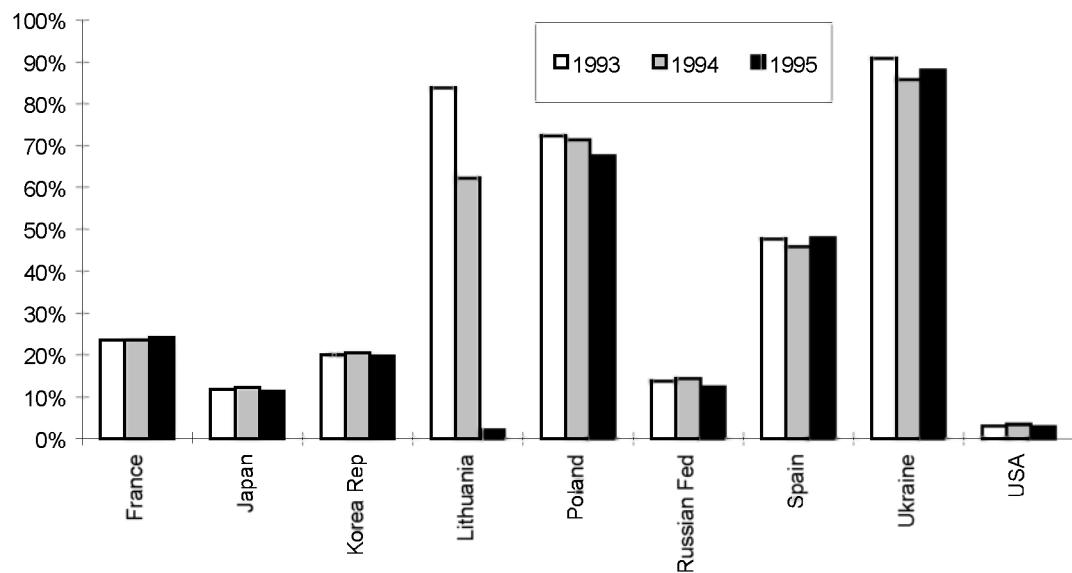

### Chart 6.2 World Marine Catch by Ocean 1970 - 1995

[Table 6.4](#) shows marine catch by the principal countries fishing in non-adjacent major fishing areas. Non-adjacent fishing areas refer to those major FAO fishing areas (see [Chart 6.4](#)) which are not adjacent to the country in question. Data for the UK have also been given for comparison purposes.

As can be seen from [Chart 6.3](#), in 1995 Ukraine caught the biggest proportion of its total catch in non-adjacent major fishing area, 88 percent (0.3 million tonnes). Poland caught 68 percent (0.3 million tonnes); Spain caught 48 percent (0.6 million tonnes); France caught 24 percent (0.2 million tonnes); and the Republic of Korea caught 20 percent (0.5 million tonnes).

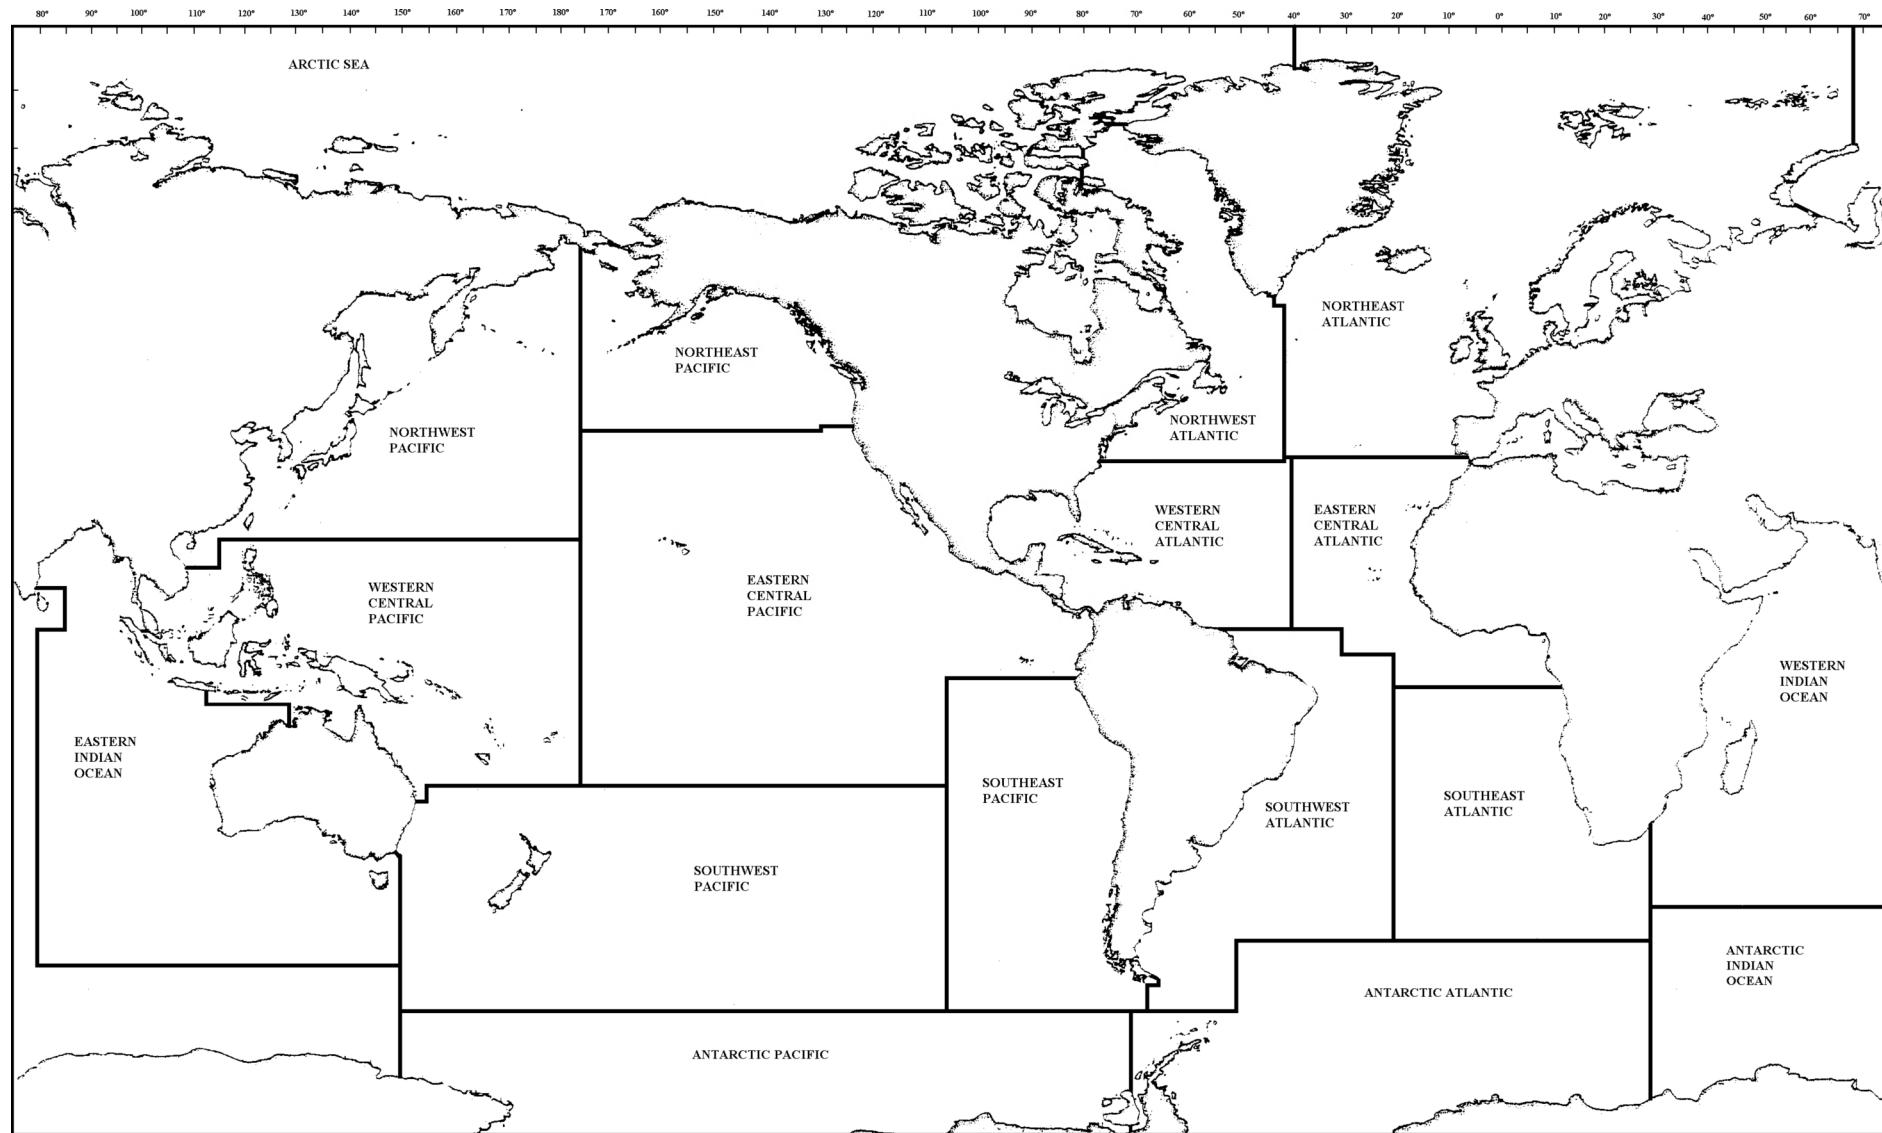

**Chart 6.3 Catch Caught in Non-Adjacent Fishing Areas as a Percentage of the Total Catch.  
(1993-1995)**

#### EU Quotas and Uptake

[Table 6.5](#) shows the 1995 European Union TACs and quotas (after exchanges etc.), together with the uptake by each Member State. Member States are required to report to the European Commission details of landings into the Member State by their own vessels and by vessels from other Member States. The figures may therefore differ from those for the UK reported in [Chapter 3](#), which are based solely on reports to the UK.

**Chart 6.4 Major FAO Fishing Areas**

TABLE 6.5 1996 Total Allowable Catches, Quotas and Uptake (continued)

**TABLE 6.5 1996 Total Allowable Catches, Quotas and Uptake**

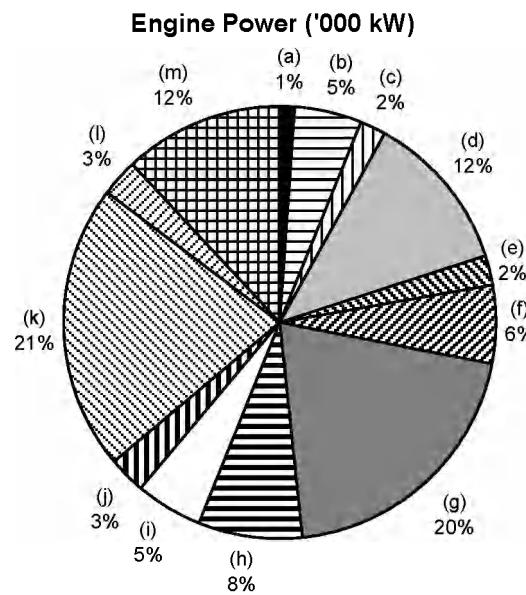

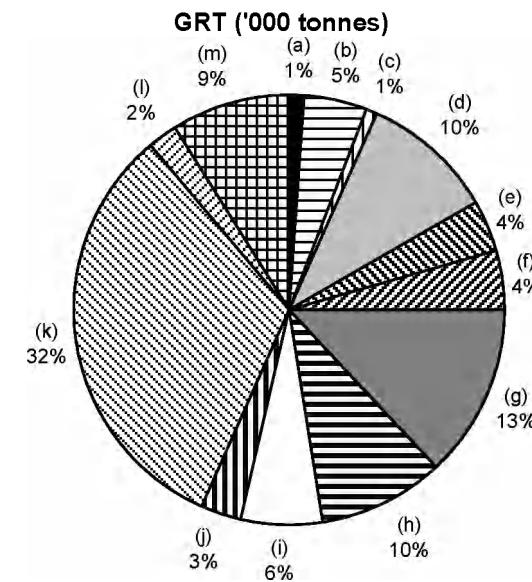

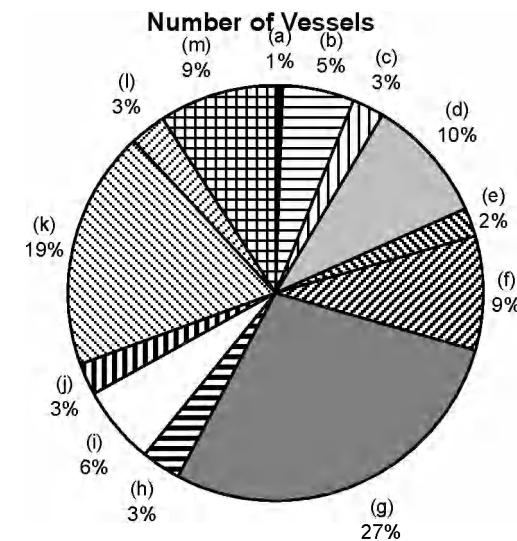

The following are the key references which accompany Table 6.5

<sup>(1)</sup> EC Zone

<sup>(2)</sup> Excluding EC Zone

- (a) Available to all Member States except Spain, Portugal, Sweden and Finland
- (b) Remaining 47,500 tonnes available to all Member States except Spain, Portugal, Sweden and Finland
- (c) Remaining 15,000 tonnes available to all Member States except Spain, Portugal, Sweden and Finland
- (d) Available to all Member States except Sweden and Finland
- (e) Remaining 3,000 tonnes available to France, Germany and the Netherlands
- (f) Remaining 250 tonnes available to all Member States except Sweden, Finland, Germany, Spain, France, Portugal and the United Kingdom
- (g) Experimental fishery, to be conducted at depths greater than 1,500; the maximum by-catch of Greenland Halibut will be 40% and will be counted against this quota
- (h) Remaining 259,000 tonnes available to all Member States except Spain, Portugal, Sweden and Finland
- (i) Remaining 164,670 tonnes available to all Member States except Spain, Portugal, Sweden and Finland
- (j) 1,500 tonnes available to Belgium, Denmark, Germany, France, the Netherlands and the United Kingdom
- (k) Available to all Member States
- (l) Available to all Member States except Sweden
- (m) Unallocated quota
- (n) No limitation on quota except Sweden
- (x) Maximum EU tac is used where quota is shared
- ∞ Fishing has occurred against a zero quota

## Appendix 1: Glossary of terms

The various species of fish are divided into three main groups: demersal, pelagic and shellfish. The names of the kinds of fish included in each group are shown in Table 3.3.

The term **demersal** fish covers species living on or near the sea bed.

The term **pelagic** fish covers species found mainly in shoals in midwater or near the surface of the sea.

The **spawning stock biomass (SSB)** is the total weight of a species population capable of reproducing.

A **year class** is the young of any one annual spawning.

**Recruits** are the young fish in the year class which is entering the fishery.

A **stock** is that part of a species population exploited in a defined fishing area.

**Fishing capacity** is the physical dimension of fishing vessels measured in tonnage, kW or VCU.

**VCU** (Vessels Capacity Unit) is calculated as follows :-

The overall length of the vessel in metres is multiplied by the breadth of the vessel in metres. This figure is then added to, the power of the engine in kilowatts multiplied by 0.45.

**GT** (Gross Tonnage) is a volumetric measurement of vessel capacity under the rules of the ITC69 (International Tonnage Convention).

**GRT** (Gross Registered Tonnage) is a general term applied to a range of volumetric measures of vessel capacity.

**Fishing effort** is a measure of the fishing activity of vessels based on fishing capacity and the time spent fishing. It may be expressed in tonnage days, kW days etc.

**Fishing mortality** is the proportion off a stock killed/dying each year as a result of fishing activity.

**Fishing areas** are defined by international convention. The immediate waters around the UK are subdivided into ICES Sub-areas IV (North Sea), VI (West of Scotland) and VII and its subdivisions (Western approaches, the Irish Sea and the Channel).

**Trawling** may be used either for bottom-dwelling (demersal) or mid-water (pelagic) species, the net being of a basic funnel-shaped construction and towed behind a vessel.

**Seining** is a method used exclusively for demersal fishing. The net, lighter than for trawling, is set on very long ropes designed to herd or contain the fish for capture. After the fish have been surrounded the net is slowly hauled back to the vessel.

**Purse seining** is a method used exclusively for pelagic operations. A very large, deep net is shot around a fish shoal and is then closed, or *pursed*, at the bottom to trap the fish. The net is then hauled upwards to concentrate the fish near the surface, and the fish are taken on board using a separate lifting net or pump.

**Fixed gears** are mainly used for demersal species. They are normally vertically hung curtains of netting, fixed to the seabed with anchors or weights and held upright with floats.

**Imports** consist of all goods moving into a country, including goods for domestic consumption and goods into bonded warehouses or free zones. In accordance with the internationally recommended practice, import statistics include fish caught by foreign fishing craft, whether or not processed on board, landed in domestic ports.

**Exports** consist of the outward movement of goods produced by businesses in the UK, plus goods, which after importation, move outward from bonded warehouses or free zones without having been transformed i.e. both exports and re-exports. Export statistics exclude fish caught by domestic fishing craft, whether or not processed on board, landed in foreign ports.

**Nominal Catches** consist of fish, crustaceans, molluscs and other aquatic animals, taken for all purposes (commercial, industrial and subsistence) except recreational, operating in inshore, offshore and highseas fishing areas (marine fishing areas). Inland waters, both fresh and brackish, are excluded. In view of the difficulty of distinguishing in many cases between recreational and subsistence fishing, figures may include recreational catches. Nominal catches refer to the landings converted to a live weight basis. There are many instances where the catches on board fishing vessels or factory ships are gutted, filleted, salted, dried, etc., or reduced to meals, oil, etc. The data on the landings of such species and products require conversion by accurate yield rates (conversion factors) to establish the live weight equivalents at their time of capture.

## **Appendix 2: Development of the UK Fishing Fleet, 1991 to 1996**

The structural policies of the Common Fisheries Policy have required the development of detailed information on the size and capacity of fishing fleets, expressed in terms of tonnage and power. This has been used primarily in the context of the successive series of Multi-Annual Guidance Programmes (MAGP), the third of which covered the period 1992 to 1996. Each programme comprised sets of objectives aimed at bringing fishing capacity and fishing effort into better balance with fishing opportunities. As the MAGP concept has developed, there have been corresponding changes to the way the fleet has been measured which has affected comparisons over time. This appendix sets out consistent statistics on the recent development of the UK fishing fleet.

### **The change from the ‘active’ to the ‘registered’ fleet**

Prior to 1990, the UK fisheries departments compiled information only on the basis of fishing vessels known to have significant levels of activity. In response to EU requirements, the definition was changed in 1990 to the set of vessels registered as fishing vessels with the Department of Transport’s Registrar of Shipping and Seamen. Following this change, there is an unavoidable discontinuity between fleet statistics compiled on the new basis and earlier figures.

### **Change to the way fleet tonnage is measured**

The basis for measuring fleet capacity has also changed over time. One of the main measures of fleet size is gross tonnage which is a volumetric measure. Both nationally and internationally there are different measures of tonnage. The historic measure has been gross registered tonnage (GRT). The European Union has been progressively moving to a common standard for measuring tonnage, known as gross tonnage (GT) as defined in International Tonnage Convention 1969.

A phased programme of conversion has been introduced by the Commission, with different procedures being applied to each of 3 tranches of the fleet, as follows:

*vessels 27 metres overall length and above* were required to be remeasured according to ITC69. A number of UK vessels have yet to meet this requirement;

*vessels between 15 metres and 27 metres overall length* are required to be remeasured according to ITC ‘69 by 2004. In the meantime, to provide comparable data, estimates of the GT for vessels in this category have been derived using equations approved by the European Commission;

*vessels under 15 metres* will not be remeasured but an estimate of the GT for these vessels is provided by equations supplied by the Commission.<sup>(1)</sup>

The development of the tonnage of the UK fleet became distorted as the large vessels were remeasured from GRT to the generally higher GT values. They were further distorted when, in some cases, vessels measured on a GRT basis were replaced by vessels measured as GT. The initial figures are presented in [Table A2.1](#). However, consistent statistics have been developed on a GRT basis covering the UK fleet from 1991 to 1996 and these are given in [Table A2.2](#).

## Segmentation of the UK fleet

For the third phase of the MAGP, the UK fleet was subdivided into non-overlapping segments each representing distinct forms of fishing activity. The segments were:

*the pelagic segment* - vessels using mid water trawls and purse seines to fish species such as herring and mackerel;

*the beam trawl segment* - vessels using the beam trawl method to catch principally flatfish such as sole and plaice;

*demersal trawls and seines segment* - vessels using otter and other trawls to catch roundfish such as cod, haddock, whiting and saithe;

*nephrops segment* - vessels using trawls to fish for nephrops;

*lines and nets segment* - comprised vessels using fixed gears to catch a range of demersal species including hake and anglerfish;

*shellfish mobile and shellfish fixed segments* consisted of vessels using mobile gears e.g. dredges and suction pumps to catch scallops and whelks or fixed gears such as pots and creels to catch crabs and lobsters.

There were two other segments, one covering all *vessels under 10 metres* and the other the *distant water* fleet representing a small number of large vessels working traditional fisheries in external waters at North Norway and Greenland.

On the basis of analyses conducted annually, vessels were attributed to segments on the basis of their recorded activity in the previous year. Where a vessel undertook activity belonging to more than one segment, then it was allocated to the segment in which it undertook most of its activity.

Registered fishing vessels over 10 metres overall length with no recorded activity were allocated to a *non-active segment*. Some vessels fishing solely species not subject to EU quotas and which therefore were not required to furnish detailed records would also have appeared in the non-active segment.

Most registered vessels over 10 metres now record some fishing activity. As a result many vessels migrated over time from the non-active segment to other segments of the fleet, distorting the statistics of the development of the fleet, by segment. With the agreement of the Commission, procedures were developed to reallocate all vessels from the non-active segment across the remaining segments for over 10 metre vessels. The figures showing the UK fleet as initially allocated to segments, is shown in [Table A2.1](#). [Table A2.2](#) shows the development of each segment, on consistent tonnage and segment bases.

<sup>(1)</sup> The length bands for remeasurement were set in terms of *length between the perpendiculars*, a basis for measuring vessel length used in ITC '69. The criteria and their equivalents in overall length were:

length between perpendiculars(LBP)	overall length(LOA)
24 metres	27 metres
12 metres	15 metres

## **Appendix 3: Time Series for Selected Fisheries Statistics**

### **History of the publication of Sea Fisheries statistics**

Statistics on the fishing industry have been made available by the Ministry of Agriculture, Fisheries and Food since as early as 1912 when the statistical tables and charts were published separately as the “Second Part of the Annual Report on Sea Fisheries” presented by the Fisheries Secretary to Parliament; the data related to England and Wales only.

In March 1921 the Fisheries Secretary (Henry G. Maurice) decided to publish the statistical tables (relating to 1919 and 1920) as a separate volume in advance of the general Report because “the value of the tables is enhanced by early and punctual publication”. At this time they became known as the “Sea Fisheries Statistical Tables”. This continued until the outbreak of the Second World War, when publication of the annual statistics was discontinued.

The “Fisheries in War Time: Report of the Sea Fisheries of England and Wales 1939 - 1944 inclusive” combined the statistical tables with the Annual Report once again as paper shortages rendered it essential to keep the Report as concise as possible: the statistics were however kept as separate as possible by placing them at the back of the report.

The “1945-46 Sea Fisheries Statistical Tables” were again published as a separate publication. This continued until the publication of the “1965 Sea Fisheries Statistical Tables” when for the first time the annual fisheries statistics were presented on a UK basis. This continued up to and including the 1990 publication.

In 1991-92 the publication changed to the present format as “UK Sea Fisheries Statistics”, and included commentary on and graphical presentation of the statistics.

### **Time Series**

This is the second year long-running time series have been used. The number of time series in this publication have been concentrated on the last 10 years. For extended historical data, the 1995 publication should be used.

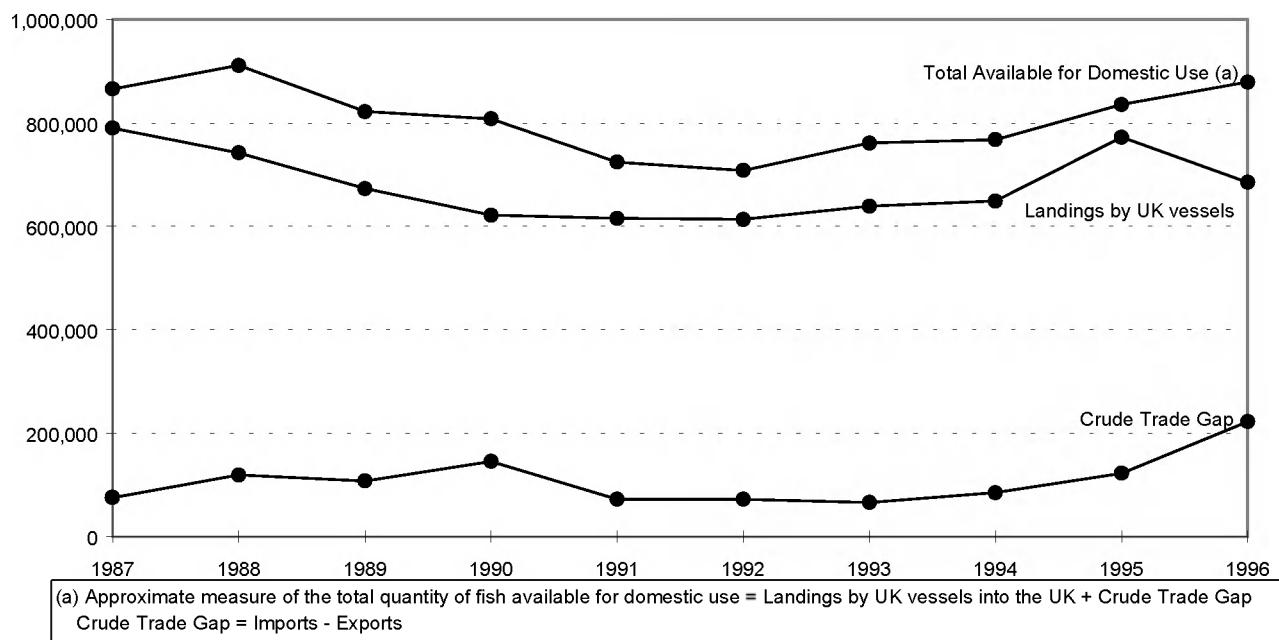

## *Fish Landings into the UK by UK vessels*

For the years 1965 to 1990, landings of fish into the UK by UK vessels was published in the “Sea Fisheries Statistical Tables” in terms of their standard landed weight equivalent. When the first of the “UK Sea Fisheries Statistics” volumes were published, the data was expressed in liveweight to be comparable that used for TACs and quotas and the standard international statistical publications (e.g. that published by the FAO).

[Table A3.1](#) gives a time-series showing the landings of fish into the UK by UK vessels in terms of the standard landed weight. Quantities of whole, headless or filleted-at-sea fish landed are shown in terms of equivalent landed weight for the most common form of presentation (head on, gutted for most species).

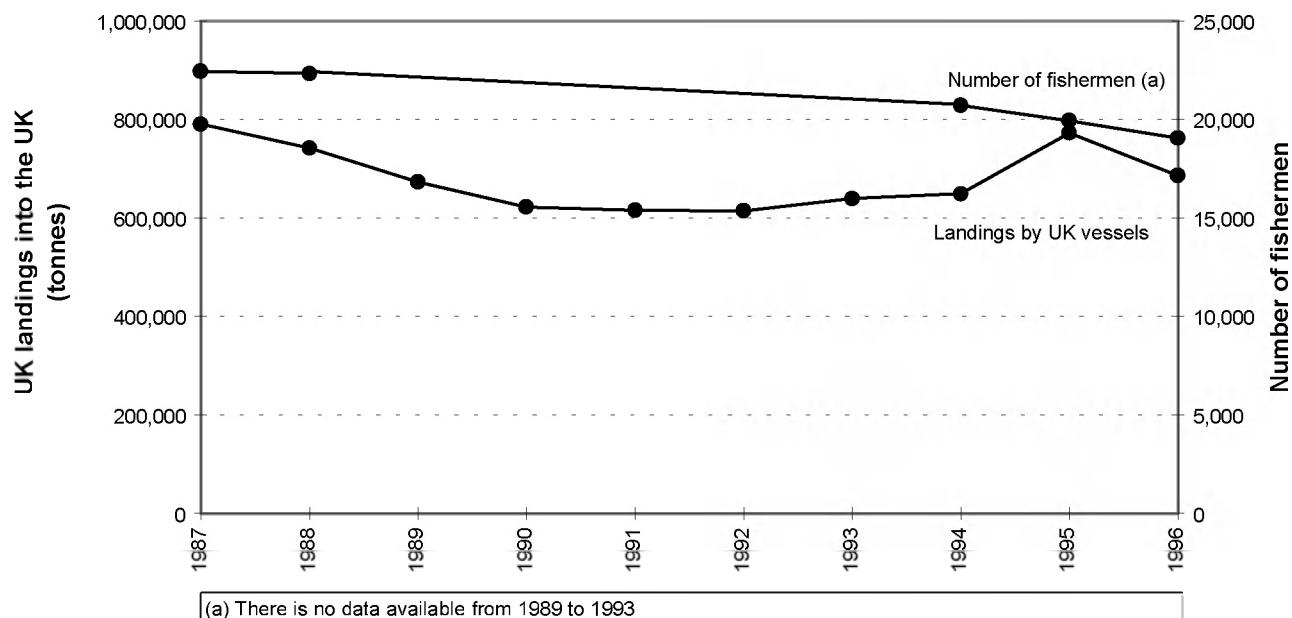

As can be seen from Chart A3.1 the quantity of landings fell from 790 thousand tonnes in 1987 to 614 thousand tonnes in 1992, a fall of 22 per cent. Following small increases in 1993 and 1994 and a 19 percent rise in 1995, landings fell 11 percent last year to 685 thousand tonnes.

**Chart A3.1 Quantity of Fish Available for Domestic Use in the UK 1987-1996**

During the period 1987 to 1996, Chart A3.1 shows that quantity of fish available for domestic use largely followed the same trend as that for landings by UK vessels. The most noticeable differences occurring when there were increases in the crude trade gap. In particular between 1995 and 1996 when the fall in landings was more than balanced by the increase in net imports resulting in a 5 percent rise in the quantity of fish available for domestic use.

**Chart A3.2 UK Landings into the UK Compared to the Number of Fishermen**

The 13 percent fall in landings between 1987 and 1996 is also reflected in the 15 percent fall in the number of fisherman over the same period.

**Chart A3.3 Quantity and Value of UK landings into the UK**

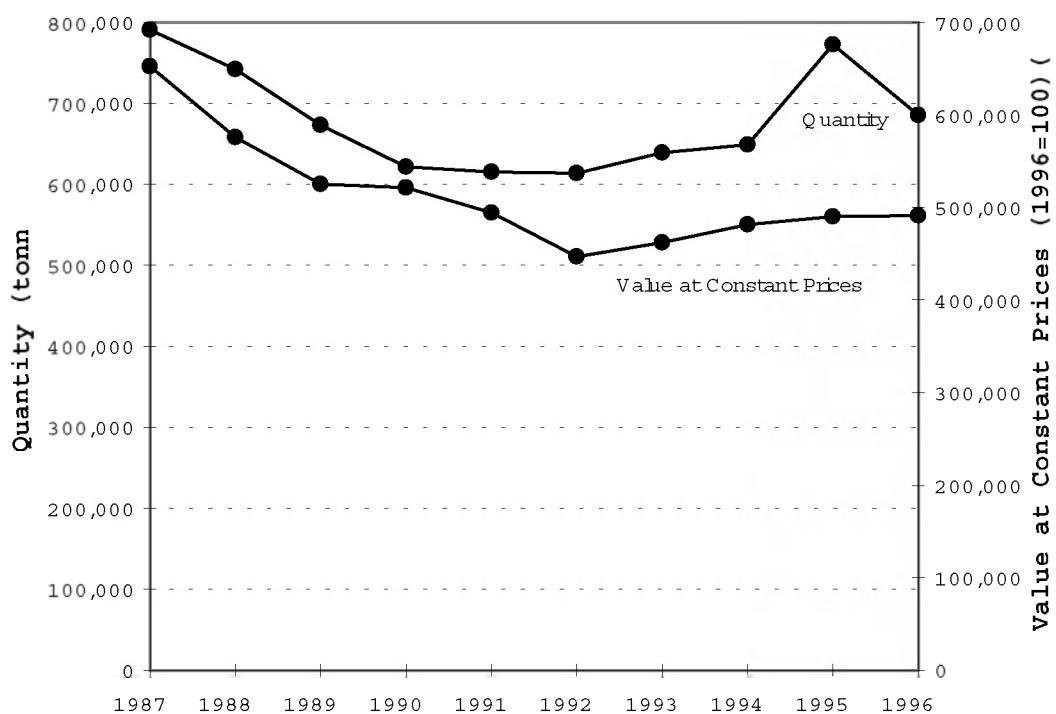

Chart A3.3 shows the quantity and value (at constant prices) of the UK landings into the UK. Over the majority of the period, 1987 to 1996, both series have shown similar trends, falling to a low in 1992 and then steadily rising in the following two years. In 1995 and 1996 the quantity has changed considerably (11 percent fall), whereas the value (at constant prices) has increased steadily to £491 million in 1996.

<b>Landings into the United Kingdom</b>							
1987	679,297	339,223	111,072	95,939	790,369	435,162	652,262
1988	645,525	310,412	96,483	92,481	742,008	402,893	575,606
1989	580,846	299,706	92,031	96,373	672,877	396,079	524,973
1990	528,367	329,492	93,143	101,012	621,510	430,504	521,213
1991	490,803	328,027	124,508	104,202	615,311	432,229	494,362
1992	505,696	309,578	108,030	95,743	613,726	405,321	446,904
1993	536,312	318,008	102,477	107,460	638,789	425,468	461,892
1994	544,416	326,720	104,451	127,746	648,867	454,466	481,450
1995	647,594	333,449	124,646	145,035	772,240	478,483	490,173
1996	553,614	343,045	131,581	148,000	685,196	491,045	491,045

(a) Values at constant prices are the current price values defaulted by the All Items Retail Price Index (1996 = 100)

**TABLE A3.2 Number and Tonnage of Fishing Vessels in the United Kingdom**

As at 31 December of each year

	UNITED KINGDOM		ENGLAND & WALES (a)		SCOTLAND		NORTHERN IRELAND	
	Number	Tonnage (b)(c)	Number	Tonnage (b)	Number	Tonnage (b)	Number	Tonnage (b)
1987	8,204	131,312	5,595	58,360	2,263	61,869	346	11,083
1988	8,132	154,834	5,440	66,843	2,334	72,345	358	15,646
1989	8,283	147,558	5,417	52,247	2,424	78,455	442	16,856
1990	11,189	206,587	n/a	n/a	n/a	n/a	n/a	n/a
1991	10,862	209,857	n/a	n/a	n/a	n/a	n/a	n/a
1992	10,979	211,919	n/a	n/a	n/a	n/a	n/a	n/a
1993	11,108	213,667	n/a	n/a	n/a	n/a	n/a	n/a
1994	10,297	205,665	n/a	n/a	n/a	n/a	n/a	n/a
1995	9,174	206,580	n/a	n/a	n/a	n/a	n/a	n/a
1996	8,073	205,794	n/a	n/a	n/a	n/a	n/a	n/a

(a) From 1987 to 1989 the figures exclude vessels which were not used at all for commercial fishing

The corresponding series of figures for Scotland and Northern Ireland exclude vessels not engaged in commercial fishing

Since 1990 all the figures refer to the registered fleet.

(b) From 1987-1989 the tonnage refers to that of the active fleet over 40 feet

**TABLE A3.3 Number of Fishermen in the United Kingdom**

As at 31 December of each year

	UNITED KINGDOM			ENGLAND & WALES (b)			SCOTLAND (a)			NORTHERN IRELAND		
	Regular	Part-time	Total	Regular	Part-time	Total	Regular	Part-time	Total	Regular	Part-time	Total
1987 (a)	17,153	5,271	22,424	8,737	4,027	12,764	7,522	970	8,492	894	274	1,168

1990 (b)	nd	nd	nd	nd	nd	nd	7,550	766	8,316	1,050	316	1,366
1991 (b)	nd	nd	nd	nd	nd	nd	7,303	792	8,095	1,081	288	1,369
1992 (b)	nd	nd	nd	nd	nd	nd	7,181	865	8,046	1,036	296	1,332
1993 (b)(c)	nd	nd	nd	nd	nd	nd	7,675	1,347	9,022	957	272	1,229
1994 (c)(d)	15,640	5,063	20,703	7,542	3,425	10,967	7,160	1,410	8,570	938	228	1,166
1995 (d)	16,073	3,848	19,921	8,240	2,192	10,432	6,900	1,430	8,330	933	226	1,159
1996 (d)	15,371	3,673	19,044	7,867	2,130	9,997	6,689	1,395	8,084	815	148	963

(a) Includes 1986 figures for Newlyn and Plymouth

(b) No surveys were carried out in England and Wales from 1989 to 1993

(c) The apparent increase in fishermen in Scotland reflected the licensing of 10m & under vessels; when more information became available on the numbers of such active vessels.

(d) As at 31 March for England and Wales in 1994, 1995 & 1996

**TABLE A3.4 Imports and Exports of Fish and Fish Preparations**

	Imports			Exports		
	Quantity (tonnes)	Value at current prices (a) (£ '000)	Value at constant prices (b) (£ '000)	Quantity (tonnes)	Value at current prices (c) (£ '000)	Value at constant prices (b) (£ '000)
1987	419,463	759,103	1,137,878	344,145	407,164	610,330
1988	440,801	785,750	1,122,649	321,329	384,428	549,256
1989	482,744	885,002	1,173,068	375,005	449,958	596,418
1990	497,353	968,966	1,173,195	351,357	506,421	613,159
1991	481,230	965,595	1,104,458	408,430	570,164	652,160
1992	485,018	983,683	1,084,662	412,197	564,645	622,608
1993	(d)	442,266	968,184	1,051,127	375,992	545,579
1994	(d)	457,641	1,011,634	1,071,758	372,162	636,951
1995	(d)	484,690	1,124,022	1,151,546	362,119	691,171
1996	533,169	1,213,355	1,213,355	310,365	700,764	700,764

(a) Valued at cost; including insurance and freight terms

(b) Values at constant prices are the current price values deflated by the All Items Retail Price Index (1996 = 100)

(c) Values are expressed in free on board terms

(d) Data are provisional; they appear to be incomplete by an unknown margin
