February, 1925.

To the Minister of Agriculture and Fisheries.
Sir,

I have the honour to submit herewith the statistical tables relating to Sea Fisheries for the year 1924.

Further particulars have been included regarding fish landed by foreign fishing vessels direct from the fishing grounds. In addition to the total for each port, previously shown in footnotes, the quantities of the various kinds of fish are given (in Table 2B) as they are in the case of British landings. Similarly, Table 5B gives the quantities taken by foreign fishing vessels in each fishing region. To Table 6 the total quantity and value and to Table 11 the quantities taken by steam, motor and sailing vessels and by the chief methods of capture respectively, have been added for as many years as the particulars are available.

In the last issue, tables showing the variations from year to year in the quantities of the most important fishes taken by steam trawlers and liners, respectively, in certain regions were given with the average catch per day's absence from port, and it was then intended to deal similarly with other important kinds in following issues. It has now been thought preferable, because of the international standardisation of regions referred to below, to include in this issue (Table 14) a complete statement for all regions or species of any significance, and, for the next few years, to show only the data for years subsequent to 1924.

A few rearrangements have been made and new matter has been added; in particular, Table 4 shows regionally the time spent in fishing, and Table 25 the total imports of fresh as distinguished from cured and canned fish.

The scheme of division of the seas into fishing regions used in the statistics of England and Wales from the year 1906 onwards has been replaced by that recently agreed upon by the International Council for the Exploration of the Sea for use by all countries adhering to the Council. The new scheme is described in full at the end of the volume. Apart from the distinguishing numerals there is little change as far as English fishing is concerned and, as grouped, the current year's figures may be regarded as closely comparable with those for previous years. It has not been thought necessary to include the particulars for the new sub-regions created by the sub-division of the previous regions, but an exception has been made in the case of the most important—the North Sea—and the principal facts for the sub-divisions of this region will be found in Table 9. The figures for the remaining sub-divisions are available at this office for study by persons interested and, in this connection, I desire to draw attention to the fact that the Fisheries Department possesses a considerable body of detailed statistical records which may be consulted by serious students of statistics of fisheries.

I am, Sir,

Your obedient Servant,

HENRY G. MAURICE,

Fisheries Secretary.

NOTE.—The catches by Motor and Sailing Trawlers and by Danish Seine were practically confined to one Sub-region and the figures for these are therefore very similar to those given for Region IV as a whole in Tables 8a and 14. The Sub-region concerned was IVC for Trawlers (Motor, 8,702 cwts. and Sailing 96,278 cwts.) and IVB for Danish Seine (Steam, 350,824 cwts. and Motor 7,151 cwts.) In the case of Motor Liners, 14,737 cwts. were secured from IVB and 5,081 cwts. from IVC.

* Fishing boats are divided into the following classes :—

The *First Class* includes all steam and motor boats of 15 tons gross tonnage and upwards and all sailing boats of 15 tons net tonnage and upwards.

The *Second Class* includes all steam and motor boats of less than 15 tons gross tonnage and other vessels of less than 15 tons net tonnage but of 18 feet keel and upwards.

The *Third Class* includes all boats (other than steam or motor) under 18 feet keel, except those navigated by oars only and marked with the owner's name and the port or place to which they belong.

† The increase in tonnage of the first-class boats is consequent upon alterations in the registered tonnage of boats made under the Merchant Shipping Act, 1907.

* The numbers engaged upon War Service were not separately distinguished in 1914 but included under their usual method of fishing.

† The figures for 1924 are subject to revision.

NOTE.—Only vessels returned as fishing solely by trawl, lines, or drift nets (with which, before 1924, are included some Danish Seiners) or engaged upon War Service appear in this Table.

IMPORTS AND EXPORTS.

(The figures for 1924 are advance figures specially supplied by the Board of Customs and Excise.)

BOUNDARIES OF THE FISHING REGIONS.

AS FIXED BY THE INTERNATIONAL COUNCIL FOR THE
EXPLORATION OF THE SEA (SEPTEMBER, 1924).

NOTE.—The distinguishing numerals of the corresponding former regions are shown to the left of the heavy rule. The chief differences in the boundaries are the use in all the new divisions of lines of longitude and latitude instead of depth lines or lines between landmarks, and the extension of the North Sea 1° further north. But these changes affect the classification of the English catches very little and the new regions may be taken as being in very close agreement with those formerly in use.
