FOREWORD

The Sea Fisheries Statistics for 1984 largely follow the layout of the 1983 publication. Where appropriate, figures for earlier years have been converted to metric units. Classification of vessel lengths and gross registered tonnage of vessels remain in imperial units. The tables refer, as far as possible, to the United Kingdom with separate figures for England and Wales, Scotland and Northern Ireland. Additional statistics relating to Scotland are published annually in the Scottish *Sea Fisheries Statistical Tables.*

In some cases figures for the various parts of the United Kingdom are not strictly comparable and differences are explained in the headings and footnotes of the tables. More general definitions are given in the Explanatory Notes on Page 1.

These Tables are intended to provide a broad picture of the United Kingdom fishing industry and its operations. Requests for more detailed information should be addressed to:

The Secretary,
Ministry of Agriculture, Fisheries and Food,
Fisheries Statistics Unit,
Great Westminster House,

CONTENTS

Unless otherwise stated all tables relate to the United Kingdom with, where available, separate figures for England and Wales, Scotland and Northern Ireland.

EXPLANATORY NOTES

1. The various species of fish are divided into three main groups: demersal, pelagic and shellfish. The names of the kinds of fish included in each group are shown in table 2.

2. The term "demersal" fish covers species living on or near the sea bed; "pelagic" fish are species found mainly in coastal waters in shoals near the surface of the sea. The term "wet fish" is used to denote both demersal and pelagic species.

3. Quantities of whole, headless or filleted-at-sea fish landed by British and foreign fishing vessels are shown in terms of equivalent landed weight for the most common form of presentation (head on, gutted for most species) except in the trade tables (17 et seq) where actual product weights are shown, and in the area of capture tables (6) where *liveweight* is shown.

4. The term "British landings" relates to the landings of British registered fishing vessels.

5. Mackerel landing figures for 1979–1984 include a quantity caught by British vessels but not actually landed at British Ports. These quantities are transshipped to foreign vessels in coastal waters and are later recorded as exports.

6. The sign . . indicates a quantity of less then 0.5 tonne or a value less than £500 according to the table.

7. Difficulties in collecting complete statistics on shellfish landings mean that available figures may significantly underestimate the total landings in some instances. The figures are however thought to be broadly indicative of trends.

(a) Salmon and trout are excluded.
The quantity of boneless fish is expressed in terms of landed weight equivalent (head on, gutted). The actual weight of imported boneless fish is shown in tables 17 and 18. Imports include semi-preserved (salted, in brine, dried or smoked) fish.

(b) Pelagic fish, other than herring, are not separately distinguishable in the import statistics. These imports are relatively small and are included with demersal fish.

(c) Landings include transshipments of mackerel (see explanatory note 6, Page 1).

(d) Imports for demersal and pelagic fish are not given separately as they are not readily distinguishable in the import statistics.

(b) Average values for Great Britain not available. Landings in Scotland of the species in the years indicated were included with 'Other Demersal' or 'Other Shellfish'.

(c) Prior to 1972 landings of Escallops and Queens were not separately identifiable and were entered under one heading of Escallops.

* Changes in the numbers of under 40 feet vessels are due partly to changes in the definitions used for this sector of the fleet.

† Since fishing vessels can be registered under various Shipping Acts, the gross registered tonnage figures are not strictly comparable but are nevertheless thought to be indicative of trends.
