FOREWORD

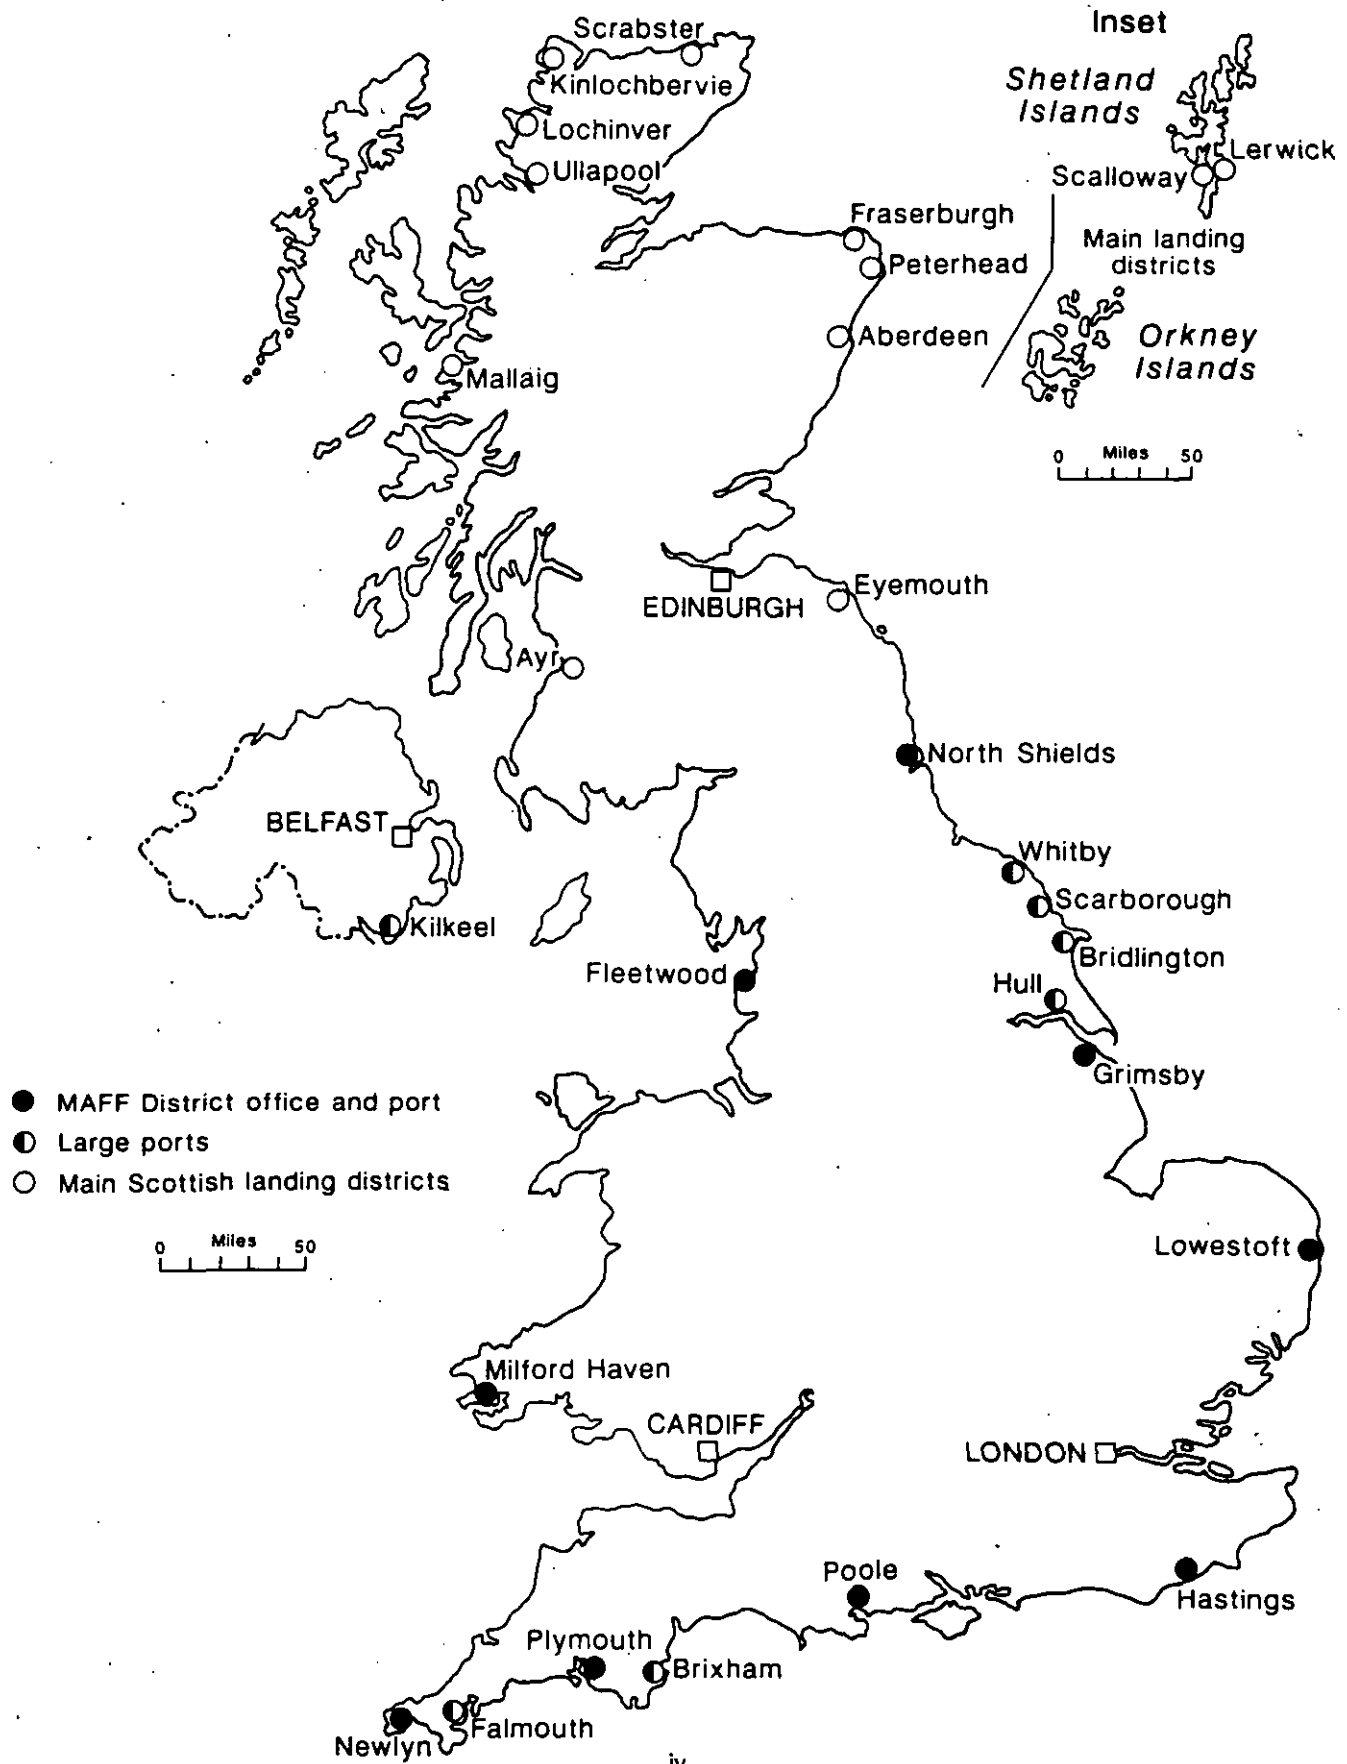

The Sea Fisheries Statistics for 1988 mainly follow the layout of the 1987 publication. Where appropriate, figures for earlier years have been converted into metric units. Classification of vessel lengths and gross registered tonnage of vessels remain in imperial units. The tables refer, as far as possible, to the United Kingdom, with separate figures for England & Wales, Scotland and Northern Ireland. Additional statistics relating to Scotland are published annually in the Scottish Sea Fisheries Statistical Tables.

In some cases figures for the various parts of the United Kingdom are not strictly comparable and differences are explained in the headings and footnotes of the tables. More general definitions are given in the Explanatory Notes on Page 1.

These tables are intended to provide a broad picture of the United Kingdom fishing industry and its operations. Requests for more detailed information should be addressed to:

EXPLANATORY NOTES

1. The various species of fish are divided into three main groups: demersal, pelagic and shellfish. The names of the kinds of fish included in each group are shown in table 2.
2. The term "demersal" fish covers species living on or near the sea bed; "pelagic" fish are species found mainly in coastal waters in shoals near the surface of the sea. The term "wet fish" is used to denote both demersal and pelagic species.
3. Quantities of whole, headless or filleted-at-sea fish landed by British and foreign fishing vessels are shown in terms of equivalent landed weight for the most common form of presentation (head on, gutted for most species) except in the trade tables (17 et seq) where actual product weights are shown, and in the area of capture tables (6) where *liveweight* is shown.
4. The term "British landings" relates to the landings of British registered fishing vessels.
5. Mackerel and herring landing figures for 1978-1988 include a quantity caught by British vessels but not actually landed at British Ports. These quantities are trans-shipped to foreign vessels in coastal waters and are later recorded as exports.
6. The sign . . indicates a quantity of less than 0.5 tonne or a value less than £500 according to the table.
7. Difficulties in collecting complete statistics on shellfish landings mean that available figures may significantly underestimate the total landings in some instances. The figures are however thought to be broadly indicative of trends.

(a) Salmon and trout are excluded.

The quantity of boneless fish is expressed in terms of landed weight equivalent (head on, gutted). The actual weight of imported boneless fish is shown in tables 17 and 18. Imports include semi-preserved (salted, in brine, dried or smoked) fish.

(b) Pelagic fish, other than herring, are not separately distinguishable in the import statistics. These imports are relatively small and are included with demersal fish.

(c) Landings include transshipments of mackerel (see explanatory note 6, Page 1).

(d) Imports for demersal and pelagic fish are not given separately as they are not readily distinguishable in the import statistics.

(b) Includes transshipments of mackerel (see explanatory note 5, page 1)

(c) *Includes landings by foreign vessels and carriers (if first point of sale of fish). Total imports which combine landings by fishing vessels, carriers and cargo vessels are shown in tables 17 and 18.

(d) Landings of nephrops, are expressed in terms of wholeweight equivalent. Prior to 1982 landings in Northern Ireland were expressed as tails only. (To convert tails to wholeweight multiply by 3).

(e) Includes landings into Northern Ireland with the main species being cod (86 tonnes) and nephrops (75 tonnes).

* Changes in the numbers of under 40 feet vessels are due partly to changes in the definitions used for this sector of the fleet.

† Since fishing vessels can be registered under various Shipping Acts, the gross registered tonnage figures are not strictly comparable but are nevertheless thought to be indicative of trends.
