In de periode 1 t/m 16 april 1993 werden waterstandsmetingen uitgevoerd in het Land van Saeftinge. Gemeten werd in twee meetpunten in de sloot langs de "gasdam" in de Selenapolder.

Eenzelfde meting werd eerder uitgevoerd in november 1992. Zie notitie ZLMD-92.N.015.

De metingen werden uitgevoerd met druksensoren.

De situatie van de meetpunten in het meetgebied is weergegeven in de bijlage 1.

In de bijlage 2 staan de ingemeten hoogten van de twee meetpunten vermeld, met de instellingen van de druksensoren.

Om tot vergelijkbare waarden te komen is het verschil in instellingen (- 3 cm) toegepast op de meetwaarden van MP1.

NAP-correcties $MP1 = -3 + 71 = +68 \text{ cm.}$

$MP2 = +180 \text{ cm.}$

De ongekorrigeerde meetwaarden zijn verzameld in de bijlagen 3 en 4 (MP1- MP2).

In bijlage 5 tenslotte zijn de gecorrigeerde meetwaarden t.o.v. NAP grafisch uitgezet tegen de tijd.

(Correctie voor barometerstand is niet toegepast.)
