

Data management course

Part III collecting data

Overview

- A monthly cruise
- Activities at station
- Sample handling
- Data recording
- Metadata recording
- Underway data

- 1 day 10 stations

Plan summary

- measuring temperature & salinity profiles and surface data underway, chlorophyll ,nutrients in water and sediment, suspended matter, sediment fractions, living plankton, fixated plankton..
- Ship is equipped with underway data system
- Samples are sent to different labs & results come back in batches after upto 1 year later
- Campaign is repeated every month

Activities at station

- Arrive at station
- Take ctd
- Take secchi disk
- Take niskin bottle 5-10l
- Take 2-3 bucket samples & filter, keep sample at seawater temperature
- Take sediment core with reineck
- Up to next station

Data center VLIZ

Marine Da

Sample handling

- Water
 - Filter 0.5-1l for chlorophyl
 - Filter 0.5-1l for total suspended matter over weighed filter
 - Filter 100ml for nutrients
 - Fix 100ml with lugol for plankton composition
- Sediment
 - 5cm core in freezer for nutrients
 - rest in bags for grain size analysis
- Sample identification
 - Ship, station, date,(volume)
 - packaging

Data recorded

- Station : position and time at arrival & departure
- CTD cast : position, start, stop time
- Water sample(s): position, depth, time, volume
- Sediment sample: position, time
- Trawling : start&stop position, time, speed

Metadata recorded

- Cruise
 - Ship, work area, scientists on board, stations planned
- Station
 - Planned position, station name or code
- CTD
 - Instrument used, serial number
- Water samples
 - sampling method, filter method, fixation method..
- Sediment samples
 - Instrument used

Underway data available

- GPS: position, course, speed, UTC time
- Echo sounder: bottom depth
- Gyro: heading
- Meteo system: atm.pressure, rel.humidity, wind speed & direction, air temperature
- SBE21 thermosalinograph : seawater temperature, conductivity, salinity
- Fluorimeter : chlorophyllA

Underway data relevance

- Scientific background information
- Correct position & time (GPS)
- Quality control on recorded data
 - Position of sample vs ship speed
 - CTD max depth vs bottom depth
 - CTD temp&sal vs UW temp&sal
 - Trawling operations vs ship speed

Results

- 9 CTD casts
 - Hex file & calibration file
- Lab notebook or report
 - 9 station positions, date & time
 - Deployments & samples position, date & time
- 1 excel spreadsheet
 - Overview of samples, volumes filtered
- Underway data in ship database
- Demo : [Midas trip 872](#)

Processing

- Process CTD casts
- Download underway data
- Process the samples
 - Water
 - nutrients NO₃, NO₂, NH₄, Si, PO₄
 - ChlorophyllA
 - SPM
 - Sediment
 - Nutrients
 - Grainsize composition

Data processing

- After trip : raw data & metadata files
 - Hex&Con CTD files, trip report, UW data
 - Filenames ~ trip (ship, date) or station (ship, date, station)
 - QC the data & metadata
 - Organize in 1 folder, 1 readme file
- After processing : processed data files
 - reports from lab(s), CTD files
 - observation data in excell (or access)
 - QC the data
 - annotate: metadata tab
- After research : archive & share with datacentre

Some results

Salinity (PSU)

31.0
31.5
32.0
32.5
33.0
33.5
34.0
34.5

Example file formats

- Trip report: [VLIZ050329.xls](#)
- Midas trip: [Midas trip actions](#)
- CTD raw hex files: [4126_050329_330.hex](#)
- CTD processed file:
[4126_050329_330_CFALBD.cnv](#)
- Processed CTD: [Midas CTD](#)
- Integrated CTDs: [CTD Midas.xls](#)
- Integrated campaign file: [Monitoringdata.xls](#)

Archiving & sharing

- Document the data
- Make archive copy & store safely
 - mda.vliz.be
- Send data to data centre, NODC
- Share with colleagues
 - [IMERS](#) , [SEADATANET](#), WOD
- Data publication, DOI
