Contact Full name : Role in your institute :	Dr. Prem Wattage Chargé de recherche
Simple text to define your institute's work and missions	CEMARE is a research and training institute work in the area of aquatic Resources Economics and Management worldwide.
Simple text to identify the link of your work with the ISECA project	I am a natural resources economist and involved in socio-economic analysis of eutrophication in the English Channel and southern part of North Sea.
Simple text to define main topics you are working on and which are interesting for other scientists	Coastal ecosystems can be studied using an interdisciplinary approach and I am mainly working on ecosystem valuation which is an integral part of ecosystem sustainability.
Simple text to define topics you are working on and which are interesting for the public at large	Understanding the total value of coastal ecosystem by the public at large is an essential step towards achieving the coastal ecosystem sustainability. We generally undervalue coastal values since the commodities (coastal resources) are not priced.
Which are the events you organize or in which you participate? (please precise their name and dates)	We organize international conferences and we had one in Sri Lanka during August 2012 on " <i>Marine fish 2012</i> "
Videos and photos (copyright free) you have to illustrate your work in the ISECA project.	We have photos of ISECA field survey areas.
